> $20.00 more for the VERY same antenna.

Some are willing to pay $20 extra to an honest person rather than give
money to a con man.

> That was the only point to be made.

You claimed AntennaWarehouse sent you the names of the beams they
tested their beam against but you refuse to say which ones they were.

You are just perpetuating the lie AntennaWarehouse made.

Why don't you address this George? Why the claim and sudden silence?
Why have you been asked this 6 times without a single response?

Is it because you actually lied to cover for AntennaWarehouse?

What is with that George?

I'm having a hard time believeing that there isn't Air-Air Combat Training in the Warning Areas off the coast of NewYork such as in W-106 & W105 areas. In your area I'm not sure who would be controling that. But here in Florida (Daytona Beach) I hear several training flights daily in the warning areas off our coast. You should be able to hear these up to about 100 mile away if you have a decent antenna (200 miles if you have good equipemnt). I use to live near Philadelphia and would from time to time hear training flights off the New Jersy coast and there was a bombing range north of Atlantic City for which I can't remember the name. From time to time I would hear traning missions there as well.

Aren't there still CAP (combat Air Patrol) flights flying above NYC? We have them down here and they are very active since they moved the space shuttle out to the pad last week.

Want tons of MilAir, come to Florida!!! 6 Scanners all with MilAir Freqs, rate that 2 mintues goes by with silence.

writes

>I need a manual for an AOR-2515 scanning reciever. Since AOR sold out to
>ACE, ACE will not support AOR stuff. That'a what they told me when I called
>them. Does anyone have one or guide me in the direction to get one.

The AR2515 was a "modified" AR2002.

ACE Communications were at the time the AOR Importers/distributors in
the USA and the conversion was done by ACE in the States. It was not an
AOR Japan product as such and not distributed by AOR in other areas not
sold once ACE were no longer AOR distributors.

AOR distribution in the States subsequently went to EEB/EDCO and finally
with their own and current office in Ca.

The "features" of the AR2515 were later included with the AR-2500
(Trident TR-4500) but using a different "receiver" to that of the
AR2002.

If you are unable to find a copy in the States I can help with a
photocopy of the details I have on file.

Hello All

I'm a beginner , I want a good scanner and was thinking of getting the yupiteru mvt 7100. But if there is something better for about the same price what should I go for?

when I've made up my mind can anyone recommend a good radio shop to get it from preferably with a website so I can check out their prices( I'd even consider second hand)

Thanks

Aidan

Go to
http://www.strongsignals.net

there is a ton of information and scanner reviews. You first need to
investigate what you want to listen to what kind of systems are in your
area. Do you have trunking or do you have digital which means you can
listen but will not hear anything.

Yeh the Pro-94 is on sale for 149.00. Almost bought one yesterday, but
realized it didn't have a computer interface. Bummer. Can't imagine using
1000 memory slots either...but then again it is a good price. Does any
scanner have the ability to scan conventional freq and trunked freq at the
same time?

I've heard good things about the radio though.

OK. So if I got it straight, here's an X-10 summary:

Plug-in modules using 60Hz AC as a carrier: 120 kHz
Wireless remote control modules: 310 MHz (common garage door opener range)
Wireless video cameras: 2.4 GHz

Is that correct?

Hi George,

Hm.. I don't know... sounds good though! I'm getting the itch to put up a dedicated antenna for the milair bands and see what I snag. I used to go to Baltimore every other weekend and as I traveled down the Jersey Turnpyke I saw jets galore flying across the pyke so you're probably right. I have 3 active freqs for CAP and they are excellent. I need more of that.

Another fellow posted to me and I just figured that the listening was better if you're near bases or some type of area where top gun types train... I listen to a lot of Emergency services stuff here and it is awesome. Even listen to the NYPD helo's doing searches and chases... and Tactical NYPD & FDNY stuff [my favorite]. I have scanners that do cell and cordless but the novelty of that wore off years ago and I don't even bother with it. I work for NYC DOS and listen in to that.

I have a load of fed stuff programmed in but I don't listen to that much anymore either... but it's good. I have the marine freqs and also a couple of close by towns programmed in that are fun to listen to... Plus a lot of ham radio stuff. I'll keep hunting. A fellow asked for info on MILAIR so I gave my end of it. I figure like this. If 10 people say it's awesome and active and I'm the only one telling the newbie it's weak.. then I must be wrong... or maybe I'm right.. in my area.

I have 2 trunktrackers that stink here in NY but are great elsewhere! They're even rendered more useless now that the towers were knocked down because a couple of systems went down with them. But if you ask someone in another state they might say: Gee! I hear a lot of great stuff with the trunk trackers and they'd be right. Anyhow, you've given me a little bit of a bug so I'm off and searching. Thanks for your post and later!

Buck@roo.

Bill,

I've been hearing both sides of the conversations all afternoon (6 Nov). I've been out of the AF for a while, but it sounded like Start, Taxi, & T/O times, ETA, and Fuel Load reports to their ops center. Ground (female) was loud and clear, as were most aircraft. A few aircraft were weaker, but based on the T/O time, they were getting a ways out before making the call.

A few ideas: Are you sure you have the correct antenna in sight? Maybe it's highly directional (I'm in the south central area of LV). Is your squelch set too high (the planes probably put out more watts then the ops center)? Maybe when you were listening the ops center Tx was inop and the aircraft were make reports to the working Rx "in the blind".

Good listening'
Greg

# 1778. HELP! PRO-2006

Newsgroup: rec.radio.scanner
Date: 2001-11-07 01:36:25 UTC

Hi all,
I have a nice PRO-2006 scanner that seems to have a minor problem?...The battery light keeps flashing even though I have replaced the battery several times with a new battery? It never stops flashing?....Does anyone have an idea on how to fix this problem or what it could possibly be?..
Any help would be greatly appreciated!
Thanks-Russ

>

Or if the your city police is on 154.730 you can make text to show
your city PD as anytown PD with the freq, 155.730 or in place of it.
It's no big deal if you know all your frequencies and naming them
doesn't matter to you.

As owners of the aor8600 scanners may have found out,there scanner has quite
a lot of noise in the audio coming from the speaker
Questions:
a) am i the only one with a noisy audio ??
b)what causes this noise (wich part of the receiver) ??
c)how can it be solved ??

comments:
somebody told me its caused by the mixing stages ??
my solution for the time beeing is to include a small audiolowpass filter
or
a small equaliser (bass/middle/treble) wich should be inserted before the
last audio-amplifier stage.
I might come up with a better solution but i dont have a scematic for the
8600

Please mail your comments to comsecnl@hotmail.com

Hello R. Smith: Take a look CRB Books at:

http://www.crbbooks.com/

Under the catagory of Radio Comminications, thaey have some modification
and repair of scanner books.

Hopes this helps.

Oh one more thing, look at the wirng from the battery connection plug,
to the cirdcuit board, maybe a bad connection somewhere?

# 1788. Re: Need help from the pros: Monitoring Mil-Air

Newsgroup: rec.radio.scanner
Date: 2001-11-07 03:10:17 UTC
From: bellp400@msn.com
Message-ID: <35ba9d22.0111061910.77aa83d2@posting.google.com>
Source record: 57438

Here are some suggestions on monitoring mil-air:

1. Start with a good internet source for frequencies. Although I monitor Nellis AFB, I used the resources at Ohioscan.com as an initial source for frequencies, then checked as many sources on the net as I could find. Take the identification of these frequencies with a grain of salt, I've often found that the listed frequency is just someone's callsign, so I list a lot as tentative until I can positively identify them, at least by function.

2. You will probably next need to reduce the number of frequencies you have found. You will find many mil air communications on UHF are duplicated on VHF. To cut down on duplicated transmissions, I only program the UHF freqs, after making sure that, in fact, the VHF is the same communication as heard on UHF. An exception would be the VHF emergency channel.

3. Of course, listen carefully, as frequency changes during flights may be announced, but usually won't be repeated.

4. You might also find base security and fire operations of interest, alhtough these are not on the air band, they are worth monitoring.

Hmm,

Since when has NC passed any 'restrictive" laws on scanner listening? I
know of no place in
NC where I cannot have a scanner in my vehicle, or a ham transceiver that
"may" hear outside
the ham bands.

why not attach an audio filter to the line/headfone out ... means you dont have to open /modify/void the warranty on your radio.
i built a tuneable notch with sideband filters for listenong to HF on my handheld. it has an audio stage for powering a bookshelf speaker so better audio all round.

Hi,
Many times there are skip signals that can key up a repeater from a
long
distance,That's why many ham repeaters have PL tones,that way
hoprfully
the skip,lacking the correct PL tone will not key up the repeater.And
the is so much junk RF,from the thousands of radios,TVs,and business
radios.
A few years ago the number of FCC workers drop a lot,as a way to
save money. Hams,have our OO(official observer) program were we
monitor ourselve,these voulenteers collect info,and when they seem
to have enough info on a serious offender,they call in the FCC.And
turn over the evidence.But how long it will take to get a real jerk to
stop being a fool,veries.First notices,then fines.and fortiture of
gear,findly arrest,if the jerk is a real JERK.

> This may be a stupid question, but I was wondering if I could use my
> pc as a receiver if I attach an aerial to it?

This is not a stupid question, it's a great question. The Next Big Thing in radio will be the Software Radio, transmitters and receivers in which almost all functions are performed in software, with only minimal hardware. Your PC won't quite do it today, but you can buy receiver cards that plug in and are controlled by the PC. In the future, the receiver card will be small and cheap, nothing more than an RF amp, a filter, and an analog-to-digital converter. Everything else will be done in software. Great stuff coming; stay tuned.

For more info on Software Radios, see
http://ourworld.compuserve.com/homepages/jmitola/

www.pro-92.com

Get the free Win92 Software at
http://www.starrsoft.com/freeware/win92/index.html and make the one way
cable listed at http://home.att.net/~cz17/radio/adapter.htm . This will
help alot. I use the software and made the cable and it works. The cable is
upload only but you can buy a upload/download cable at
http://pfranc.com/pclink/ScannerDeal.htm if you want to do that. I found
that upload only works for me and my total investment was some parts I had
and $1.99 for the transistor used in the cable. I couldn't imagine
programming the scanner without the software. It makes inputing frequencies
and Alpha Tags a breeze. Also read the manual about 10 times as that is how
long it will take to make any sense. After a few reads your brain will
finally grasp what the manual is saying. The first time I read the manual my
brain went to jello. Needless to say this is a good scanner and I like it
alot. Hope you enjoy.

Todd

I have the Police Call Mag from RS..... I can't seem to find what type of systems these frequencies are on. The EDAC is self expanatory..with the numbered sequences I found in the book. Type1 Type 2 .....?? When you put the type of system into your PRO 92 does it effect it's operation if it's wrong? Stupuid questions I know....but, I'm a newbie

Several squad cars=One dozen or more squad cars and a helicopter??
What are the requirements for major then?? When was the last time police
chased an 18 WHEELER for an hour and a half, while it's on fire and lumber
is falling, and the tire blows out and goes rolling down the street(on
fire), and then catch the driver only after firing at him once when he
slowed down, and then later storming him AFTER he stopped the truck on his
own? What were you expecting him to run over people and then they call in
the Army? Maybe if the truck had Nukes in the back? Maybe if it was a
flatbed with playboy dancers swallowing fire in the back will doing magic
tricks?

# 1827. Yupiteru MVT-9000 MKII or AOR AR8200 MKII??

Hello all,

Looks like I'm going to have the opportunity soon to purchase a new wide range scanner, and from all I've read recently I like the MVT-9000 MKII and the AR8200 MKII particularly well... But I can't as yet make a decision... So...

If you guys were stranded on a desert island full of radio traffic, and your only source of amusment was monitoring, and some jerk told you that you could only have either a MVT-9000 MKII or a AR8200 MKII, which would you pick and why?

TIA for any help/opinions/critisisms/praises/etc :-)

Hi there,
Radio Shack BTX-122 part number 19-1203
Just wondering if anyone has any knowledge of this radio?
When was it sold?
How many watts?..
What freq. are they on?
Any help would be greatly appreciated!
Thanks-Russ

Well, I've spent a lot of time using the Yupi, and only a few hours on
the AOR. Both have pluses and megative, but all in all, I like the Yupi
better. They both are pretty awkward to use at first, especially if you
are coming from a Uniden/Radio Shack mindset. The Yupi has great audio,
better (IMO) than the AOR, but it isn't bad either. Intermod problems
are about the same level, but the freqs you here it on are different.

Good Luck..

than iether the Yaesu or AOR.
>BDK

That's the best advice anyone will give you & it's free! The Icom R-8500 is
even better (performance wise) than my R-9000. You won't believe the
improvement in sensitivity, but it's the selectivity and adjacent channel
rejection which is becoming even more important. As the steps between
channels shrink to accommodate more customers (after all the bandwidth is
relatively finite) I have noticed an increasing amount of bleeding,
especially on Wide Band FM with only 12.5 KHz between channels. There's
already talk of reducing this to 10 MHz on some bands, as several countries
already have done. So if you don't want to throw your $1000 down the drain,
do as the man says. You'll be very pleased with your purchase.

I'm jealous! Anyhow, does the 8500 keep up with HF only rigs like the R75
or the R8B on 0-50MHz?

Message-ID: <21933-3BE9FB49-64@storefull-211.iap.bryant.webtv.net>
Source record: 57389

Hi - hope someone can answer a question for me. I live in Starkville, MS where the city police and Mississippi State University share a trunked system, but I don't have a trunk tracker scanner and don't know what system they use. By searching I have found most of the frequencies in use, and I have a whole set of frequencies in the range from 811.0125 MHz to 822.4250 MHz and these are matched exactly by a set from 856.0125 to 867.4250 MHz - i.e . exactly 45 MHz higher. Are these some kind of image? My Bearcat 860 XLT has an IF of 10.6 so that the normal image location is 21.2MHZ higher. Even if this is doubled it still doesn't explain the 45 MHZ thing. Any ideas?

If you can get an Icom R-8500 in that range (used?) you won't be
dissapointed.
I wouldn't part with mine for a k$, but you might find someone on Ebay.
Great receiver. I've used it just about everywhere it covers.
I did change the backlight to LED though, I used ultrabright greens, and it
looks great.

You are right in that it's not NEW anymore. But my paper is not willing to drop the story as long as the perpetrators are still at large, doing their evil deeds, new vicitms are emerging, and, maybe the biggest part of the story as I see it, businesses, private citizens, and law enforcement people are changing the way they handle mail.

> Yes a small one FOR NOW, so let's treat it as such. Thousands of our

I don't think they're getting the short end of the journalism stick. But it is difficult for the news people to report on the military activities in Afghanistan.

> If you want to talk about bioterorism why not talk about the

I've seen a lot of reporting on this.

> I'll tellyou, if I were one of those monsters I would REALLY love CNN. They
> make itso easy to test America, and it's defenses and be FULLY aware of the
> results.

Well, maybe the enemy gets a lot of information from the news media, but the alternative would be to withold information from the public. The Bush administration seems to feel it's important to level with the American people except where is would compromise national security. And where do you draw the line?

You're right about that. And that's television news more than anything else. But I've always thought, and still do, that if you are willing to search it out, there is good reporting out there. It's just like anything else - music, television programming, movies - you gotta deal with a lot of crap to find the really good stuff.

> We need to wake up, and the Media USUALLY is'nt helping.No because I can go
> elswhere for food. I have a choice! I have no coice with

> I can't simply go elswhere for news.

Well, I respectfully disagree. All newspapers aren't the same. And news magazines offer more depth reporting. Radio and television , news reporting from abroad on shortwave...not to metion what's available on the web - there's lots of variety in reporting.

> > Disclaimer: Yup, I'm an evil media lackey.

Hey, you started this debate. And I enjoy this newsgroup. I don't have the world's ear, but I do a good job in my community. And my paper has a reputation for balanced and fair reporting.

You are obviously sincere in your beliefs and your frustration about the news media is shared by many. Apparently, I don't have any solutions for you.

Best wishes.

This might be a dumb question but..... can the resistor mod still be done an
the R8500's ?

It kinda makes me ill to think of spending $1500 on a radio that has a
frequency range blocked. Where I live cell phones are digital and I get a
feeling the analog bands will eventually be re-allocated.

Sure... I could order from overseas but that'll bring the radio near the $2k
mark...........

The lower frequencies are those transmitted by the portable/base units.
The higher frequencies are those re-transmitted by the repeaters. The
portable/base units only receive the higher frequencies.

John, I would say that it is probably a little below the R-75 in HF performance. In fact, thinking about it, I would describe the R-8500 as a scanning VHF/UHF receiver with HF thrown in. It's HF performance is certainly not up to the standard of my NRD545, but then again, neither is almost any other receiver I've either owned or tried. But for anything above 30 MHz, it's unbeatable, with perhaps one proviso. For the money, the Uniden 780XLT has to have the best cost/performance ratio of any radio I have ever owned. I confess I bought mine 2nd hand (3 weeks old; the guy couldn't work out the trunking at all) for US$235, but even at US$330 they are still a bargain. I hope to have a few mods of my own out once I get the service manual. For example, the audio, whilst more than adequate through a decent speaker, could do with a bit of 'fine tuning' and a discriminator out would also be a nice feature. Something for the future.

On the topic of the R8500 performance, how does it fair in the civil and military airband?

I am also looking at buying a base for that range, and have been considering the AR8600.

Would I be better off and wait and see what Icom brings out new at the end of the year, try and pick up a used R8500?

G'day Troy. If you can get a second hand R-8500, grab it. There were a few
available earlier this year on

www.vkham.com

but I haven't seen any lately, other than one in a US scanner newsgroup that
I purchased myself for US$800. New, here in Oz, they are well over $3000
now, as Icom have jacked up all their prices. An AR 5000 (or 5000+3) would
make a nice addition to the shack, but again, I haven't seen anything for
sale at all. If you can afford around $4000, I have a very nice R-9000 for
sale. In mint condition, with 2 SP-20 matching speakers, a spare CRT and
quite a few neatly done performance mods it's a very nice receiver. Not
everyone's cup of tea though, I admit. Regarding the R-8500's performance in
both the bands you mentioned, it is excellent. The problem here in Oz is
that there are now virtually no stockists of high end scanning receivers
other than Icom. The AR8600 is, to my knowledge, only available thru' one
Sydney importer, and it's performance is hard to judge as so few have been
sold. The specs look OK, and the unit has a few nice features, but it's
price is considerably below that of either the AR5000 or the R-8500, and as
the saying goes, you only get what you pay for.
Sorry I couldn't be more help.

> Most Motorola trunked systems only have one control channel and change every day.

Each Motorola TRS controller can have up to 4 frequencies specified as control channels.

Whether or not the controller rotates between the control frequencies, and how often, is a setup option.

The controller may temporarily disable a control channel - and switch to another of the 4 - if interference from outside the TRS is detected on the control channel.

For more than you ever wanted to know about the R3, go to the ICOMR3
group on Yahoo ( http://groups.yahoo.com/group/ICOMR3 ).
Bottom line on video - except for broadcast TV, it is pretty useless.
Not a bad scanner. US version has almost all 800 mhz band blocked out.

>are about the same level, but the freqs you here it on are different.
>
>Good Luck..
>
>BDK

Thanks for the reply. My first scanner was a Uniden 100XLT handheld,
but I became restless for more coverage and bought an AOR/ACE AR2500
base model some years later, and got used to it's ins and outs (and
flaws galore) pretty quick, which it had many...

Now, I have looked at some prices, and if I'm not mistaken, the Yupi
goes cheaper than the AOR, is that right? Anyonbe know what are the
typical US prices for these two radios? Considering that the Yupi
apparantly is a bit more sensititve than the AOR from what I have
read, I'm really starting to lean in it's direction. One thing that is
bothering me, though, is that I read something about that the scan
lock circuitry on the Yupi has a two-second delay whether you want it
or not... Is this true, or was that the MVT-7100 I was thinking of?
Also, is it true that the bandscope on the 8200 MKII is crappy, while
the one on the MVT-9000 MKII is superior? What exactly is it about the
bandscopes that makes them so different in quality?

One last thing I'd like to know more about is HF performance... I have
a real thing for HF listening, and I'd probably finalize my decision
based on that alone if there are no more serious issues to consider...

Again, thanks for your help!!

- NR

If you read my post you would realise that I don't condone NOT reporting news(which Anthrax still is), I was more referring to cutting of my finger for stealing bread. News have reported cute stories about animals that were saved, and this is fine. Is it BREAKING news? No. That was my point. IT should be reported more than ONCE/Broadcast, and it should'nt seem to shadow MOST stories. The real story is what sending Anthrax means. They have infected us with a near useless spore, but why? Is this merely a test for something worst? Anybody who knows enough to send Anthrax knows that it can't do much damage unless it is REALLY sent out. The most damage Anthrax does is with fear, curtesy U.S. Media. Thanks to the Media, IF we are lucky enough that Anthrax is thier biggest Bio-threat planned, then they will be encouraged to send more Anthrax.

> > If you want to talk about bioterorism why not talk about the

If that's what you call it. They have told us all but how to make our own Anthrax, but what kind of Nuclear deterance program do we have? Do you know? If you do did CNN tell you or did you research? Trust me, they have not REALLY reported on these issues. Any reporting they did in NO way compared to all the ANTHRAX stories.

>
> > I'll tellyou, if I were one of those monsters I would REALLY love CNN. They

> except where is would compromise national security. And where do you draw the
> line?

People alwayd seem to have problems with balance. People say how can I balance between being alert and being paranoid? You MAY have the same problem. It's not black and white; No information or Too much information. It is possible to give a more balanced report. You still inform the American people, but you don't overdo it. We in America have hundreds of channels, VCRs, the Internet. It does'nt take much to get the word out. However if you report too much you make it too easy for the enemy. Imagine they(JUST AN EXAMPLE) were smuggling out CNN tapes from another country. Would'nt it be nice to know that it would be POSSIBLE that he got the ONE broadcast that did'nt give EVERY little detail about how we are reacting? I'll level with you. You want news? How about they report all about what we NEED to know. How to be safe, how ANTHRAX is NOT a REAL threat(usually). Then we play WAY down any fear factor. How does it halp you to here "People are panicing", "Nerves are ratled". We need science and medical information, NOT how afraid everybody is. It needs to be filtered and controled, that's all I'm saying.

> > > You have the option of watching whatever you want on TV, or you may just

I'll agree, but remember I'm NOT starved for news. I have a lot better sources than the news, and actual am aware of many more development that the news has not covered. My concerns are:

Risking the safety of Americans
Scaring Americans with less information than I have
Using and abusing Americans by sensationalising thier braodcasts in A TIME OF WAR.(This is the worst time to do so;business will be business, but during war we have a responsibility to our Country.

No I DID'NT start this debate, I'm just a major contributer. My stement was more direected at people with MEdia Influence.

> You are obviously sincere in your beliefs and your frustration about the
news
> media is shared by many. Apparently, I don't have any solutions for you.

The solutions are not for me, they are for AMERICA. Remember I get my information from other sources as well, both direct and indirect. I'm an exteme person, but what about others? Many people can't be bothered to find out the real story. They are at the mercy of the MEdia. They more need solutions than I.

>
> Best wishes.

Thanks for contributing you point of view to this debate. :)

Well, to be honest, NO hand held is really good for HF, the Yupi and AOR are about the best, and that's in a really bad bunch. Any old desktop or decent protable will blow any of them away. My old Hammarlund HQ100, made in 1960, that I bought off of Ebay is miles ahead in every way but freq display.
I don't know the prices so I'm not sure how much cheaper one or the other is. The Yupi does have a delay that can't be turned off, this isn't a big deal to me, I use it while moving, and it helps keep it from taking off when it loses a signal for a second or two. The bandscope id really just a gimmick, as far as my opinion goes, neat to watch, but doesn't tell me much that I don't know anyway.

One thing you might think about. Getting an used Kenwood 2000/Yeasu 8800/lowe HF150, etc, and buying a used Yupi or AOR. Two radios are always better than one, and when I had SIX, it was great! I'm down to three now, the HQ100, JRC NRD525, and NRD 515. (A fantastic radio if you can find one in good shape.) Built like a tank! But 525's are going pretty reasonably these days too. I have several other radios that recieve HF, a MVT9000 being one of them, but I hardly ever use it, unless I'm far away from any noise generators, especially PCs.

If you do get a 9000 and want to listen to HF, put up a good antenna, not too long, and build or buy an attenuator to keep the signal where the Yupi can handle it. It overloads easily, like ALL HF capable handhelds. With a decent antenna, an attenuator and COAX lead in, you will be amazed at what you can hear. But hook even a modest desktop or halfways decent portable to it, and you will hear it better, louder and clearer. Just the laws of physics...

Good luck,

BDK

I tested an AOR AR8600 and Yaesu VR5000 side by side
next to an ICOM IC-R8500 for review in Monitoring Times
magazine. On VHF, both the AR8600 and VR5000
were hampered by intermod while the solid IC-R8500 was not.

Performed the same test with a Uniden/Bearcat BC780XLT with
similar results. The BC780XLT experienced intermod while
the IC-R8500 did not.

I find the Yup to bad in 800MHz Public Service and lacking in 462 Mhz
Med-range. I don't have the 8200 (8000) but if you live in a nasty RF
area then the AOR may be better.

>One thing that is bothering me, though, is that I read something about that the scan
>lock circuitry on the Yupi has a two-second delay whether you want it
>or not... Is this true, or was that the MVT-7100 I was thinking of?

Both. The AOR 8000 has a global delay and I assume the 8200 has one
also but you can set it at 0.0 to up to around 10 seconds or so. I
forget, I never usme more than 2.0 seconds anyway.

I hear that the 8200 is weak in HF while the YUP is decent?

>Also, is it true that the bandscope on the 8200 MKII is crappy, while
>the one on the MVT-9000 MKII is superior? What exactly is it about the

The bandscope on the Yup is really good. I have no idea about the
8200.
>

I heard complaints about the 8200 on HF. However, I don't know if this
was fixed on the 8200ll.

It's amazing how useful this technique is. I've used it to upconvert 29MHz FM signals to 36MHz and used a scanner to listen to FM conversations via an Icom 720 SSB receiver.

I've also used the system in reverse - connecting an HF SSB receiver to the video baseband output of a 4GHz satellite receiver then tuned through the Telstra telephone carriers on the Cecil Hills tower in Sydney.

I did not set out to do that, but Telstra used to run a PM5544 test card when the transponder was not in use and I was waiting for video, only to see the screen go black and realised it was frequency multiplexed stuff, so naturally, I snooped around.

I first saw this used , many decades ago, using an old B.C. band
command set receiver hooked to the 455kc I/F. of inexpensive
shortwave receivers to add selectivity and bandspread. It
worked like magic and the improvement was wonderful.
Later I used the same method , in reverse , to get F.M.
( much like you did ) by using the f.m. detector part of a commercial
rig hooked to a cheap ( and poorly working ) scanner to get FM
demodulation which it was VERY poor at. ( many old scanners would
not do wideband too.. and using the WB detector of a table radio
would be a great inexpensive way to do this too. )
Many of today's newcomers have not had the opportunity to try
out these easy and interesting radio combinations to get ssb
& cw on VHF /uhf ...and ( say ) F.M on 10 meters using
it backwards to make a shortwave receiver get F.M. ..! Many
people are waiting for the new digital ( apco 25 ) scanners to come
out and could already be listening to many digital signals ( esp
apco 25 ) using combinations of up and down conversions or
just borrowing the detector / demodulators and making certain
combinations of available radios. Great fun and exciting to experiment
with ..and totally nondestructive. ( except in borrowing the digital
detectors from radios where some circuit board runs must be cut )
I'm sure it would be FAR more satisfying to " roll your own "
and way less expensive too. The experience and knowledge
gained could be shared with others , later in life too.
hah ahhahaha

The BC895 cable is dead simple to make. Not so for the BC245. It uses a tiny connector for the radio end and it may be custom. At least I don't know where to get one. You will be miles ahead to just buy the BC245 cable from Uniden.

# 1894. ICOM IC-R10 $250 OR $210

Newsgroup: rec.radio.scanner
Date: 2001-11-09 04:54:47 UTC
From: Jerry <n6vg@lanset.com>
Message-ID: <3beb6191@monitor.lanset.com>
Source record: 57345

For sale IC-R10 hand held receiver in very good condition.
A little over one year old.
Non smoking envoirment.
No software.
Cell blocked.
Comes with box, manual, antenna etc.
Comes with 8 "AA" nimh bats rated at 1200 mAh. (I no longer
have the 4 "AA" nicads at 700 mAh which are supplied with it.)
I switched to the higher capacity nimh bats for longer play time
per charge.
I don`t know if the supplies wall wart will charge the nimh bats.
I never tried. I use an external charger with the nimh bats.
Includes the SERVICE MANUAL.
Asking $250 shipped insured via UPS.
Will sell for $210 shipped with NO BATS repeat NO BATS and
NO SERVICE MANUAL.
Jerry in Sacramento, CA.

# 1895. Re: UHF/VHF under $1000 ? - GOING REALLY PRO!?

I have never really used a highend radio, only Pro-62ish radios. My neighbor used to have what looked like a ICOM8500ish radio, but I was just a kid still learning about harmonics, wavelengths, and amplitude. My prize was a junk Marine radio that I got from a yard sale and fixed up . . . BLAH, BLAH BLAH . . .

Anyway to the point. I'm considering moving up, but what does that mean? I know I'm missing something, but what?? Other than full(almost) spectrum coverage, and more banks and battery life, what fun am I missing out on? If somebody could give a brief summery of what you get from mid level($300-$800)/High level($1000-$3000) -vs- Low end($300ish)? Beyond features, I would also like to know what "FUN" stuff you guys are scanning that perhaps I'm not getting with my Pro-62? Only the stuff that you enjoy the most, or popular scanning.

# 1896. Re: Another Dumb Newbie Question: Morse Code?

Newsgroup: rec.radio.scanner
Date: 2001-11-09 07:13:20 UTC
From: "M. Schneider" <markinokla@juno.com>
Message-ID: <nmLG7.15$Ye.9645@newsfeed.slurp.net>
Source record: 57247

The FCC requires station ID (callsign) to be given at no greater than 15 minute intervals (at least that's what it was when I was a dispatcher). Many agencies use an automatic identifier that sends the callsign in morse code, so they don't have to worry about compliance issues. The systems used varies in complexity (and price). Some will transmit the ID if the frequency remains quiet for more than 15 minutes, presuming that the dispatcher will ID at the end of a transmission or series of transmissions. Cheaper systems will ID every 15 minutes regardless.

The local university police use one that will pause the ID if a radio transmission occurs during the ID, then resume IDing from the beginning. One night somebody would wait until the repeater started IDing then would "kerchunk" the repeater, causing the ID to reset to the beginning. They kept this up for about 5 minutes, driving everybody crazy. The callsign was KKY-xxx, so you'd hear " dah-di-dah dah-di-dah "kerchunk" dah-di-dah dah-di-dah dah-di-dah-dah "kerchunk" dah-di-dah dah-di- "kerchunk" " on and on. The dispatcher and sergeant on duty were going ballistic. Since the city police, sheriff's deputies and some state troopers also have radios on the university PD freq, there was no way of determining who was doing it. What a laff!!

Just curious about who else is in this Newsgroup. What kind of people have ICOM8500s? There seem to be some very knowledgeable people in here but who are they?? What I mean is what do people here do? Are they technicians? If so, what kind? Communications specialists? SERIOUS communications enthusiasts? These radios are expensive, and I just don't see the average guy shelling out the money for them, so are you guys HARDCORE, or techie' professionals?

For the record I'm a TECHNOLOGY enthusiast. Professionally I've done both Desktop support with Windows PCs, and Visual effects production. I'm had communications for a hobby for maybe 10 years now. I built wireless mikes, then got a VHF Marine radio, dabbled with short-wave, dabbled with engineering, then bought my Pro-62. I later bought a Radio Shack Frequency counter and have been compiling frequencies in the U.S. Virgin Islands, Boston MA, London England, and New York. I know nobody cares, but I DID ask about you guys sooooo ;)

P.S. SORRY for being sooooo nosy, but the Internet is soooo impersonal, and people I know think a radio scanner is wireless device for scanning images. So I have no clue what other people with similar intrests are all about. I guess the thing to do is join a radio club huh?

Well, after you go along with the cheaper stuff, even though it works pretty well, you want something with more features, and with me, better RF performance. There are lots of weak signals out there you can't hear with a cheaper scanner, the background hash is too high.

Intermod drives me nuts, it always did. I live in an area where cheap HF recievers (portable mostly, but some of the budget desktops) totally lose their cool and it's really annoying.

Some people want to be able to control the scanning process by their PC, and only higher end models can be controlled like this. There's the trunking programs, there are some that you can make it scan certain freqs more often than others in special patterns. Some of it is pretty complex. Besides the control of the radio, audio can be recorded to the hard drive, and played back with time stamps, labels, and other info.

I have managed to cut down recently, I only have 3 HF radios, and a half dozen scanners, none of them "high end". I sold my Icom 7100 to get money for a new PC, and haven't replaced it. But one of these days, I'll buy a used (probably) IC-8500. If you ever get to play with one of the high end recievers, watch out, you will probably get the bug for one, the HF radios hooked me instantly.

Look on the back informational panel of the PRO-94A If it has a
"A" in the PRO-94 and/or Catalog Number 200-0524A then it will
scan conventional and trunked at the same time. You cant' tell by the
box it comes in. The Manufacture date code will also tell it it's an A
Go to <http://www.strongsignals.net> click on "favorite Pages"
go to message boards and check out the TRUNKING BOARD. Down the
bottom of this board is a lot of references to trunk tracker scanners
and trunking frequency/systems. The FREQUENCY BOARD has great data bases
again down the bottom, below the message pain.
Jim

## 1902. PRO-94a.....

Newsgroup: rec.radio.scanner
Date: 2001-11-09 11:24:57 UTC
From: David Drum <dbdrum@home.com>
Message-ID: <d2PG7.16091$GD.4920618@news1.rdc1.tn.home.com>
Source record: 57253

There has got to be an easier way to program this thing!!! IT's brand new "SEEMS" to work but the manual is a piece of CRAP. I bet no one tried to program this using this book. No mention of how the display is supposed to look when things are working, no mention of half of the dots or numbers flashing and what they are. It seems to go back and forth from can to search in trunk mode. Then it hits a freq (Or ID) that trips the squelch and stay there u ntil I reset it hissing all the time. I imagine this baby will be going back to the store soon if I can't find a different source of instruction

HELP!!!

Dave

# 1903. Re: Yupiteru MVT-9000 MKII or AOR AR8200 MKII??

> yet make a decision... So...

I would prefer the AOR AR8200. I have both radios in my shack and can say that the AR8200 is more sensitive on VHF/UHF/SHF, does not have so much birdies, it comes with a TCXO, you can expand its functionallity with modules, the usability with one hand is better as parts of the wheels and knobs are located at the side of the housing and the major advantage is it has a computer interface.

The MVT9000 is slightly better on HF and has some sort of bandscope display while you are listening, but has to much birdies in the 60MHz-88MHz area (almost unusable in cities with very good radio (88-108MHz) coverage), is deaf in the area of 1200MHz and above (makes it almost unusable for SatCom) and lacks the computer control for programming and saving frequencies and bandplans. Also it's housing is larger and the keyboard is a quite cheap and not that well working solution compared to the AR8200.

Both machines where bought brandnew and are used/compared on a lot of different antennas (Discone, Diamond D707 active antenna, Dressler ARA 200 & ARA 60 active antenna, LogPer antenna with/without amplifier, several Yagis, etc).

Regards
Howard

# 1904. Max800 Antenna?

I just got a PRO-94A and haven't programmed it yet. But...I have a
PRO-91, which I expect to program pretty much the same way. I feel
your pain. :-)

It's possible to program one, but it takes a lot of patience and
careful attention to detail. Get a plan first about how you want the
banks laid out. Follow the book instructions carefully when
programming--keep it blocked open to the proper pages and refer,
refer, refer. Don't worry about what's on the display, except for the
freq you inputting. Be prepared to completely reset the scanner
several times in the process.

Personally, I've never seen a scanner manual that didn't suck to a
large degree. You'd think good tech writers were hard to find or
something.

Source record: 57259

Much thanks to everyone for all the helpful data. I wish I had more patience to wait on opinions, however, as last night I folded and went for the AR8200 MKII. I think most of what finally did it for me was the computer interface and the birdie factor, which I had heard before was better on the AR8200 MKII than the MVT-9000 MKII. The final straw was the massive lack of distributors of the Yupi in the US. I suppose that I could have somehow either found a US distributor eventually, bought from outside the US, or bought one used (I just didn't like that idea), but after being bombarded by places to order the AOR, I just couldn't take it anymore.

At any rate, I'm a jitterin in my boots now awaiting my new baby, which ought to be here by probably mid next week. Now all I need to do is comptemplate antenna construction, computer control, and which part of the prodigious coverage I wish to attack first :-)

While I am thinking of it... You know by my first post that I have an AR2500, which is a crappy little cheapie-plastic monster that goes from (supposedly) 100 KHz on up to 1500MHz. I can attest well to the fact that it is definitely a wash out on pretty much anything from 100 - 1600 KHz, and I really don't think it does much of anything above 1200 MHz, or leastwise if it did I missed it over the many years I've used it. My question concerning the AR8200 MKII is this; how low does it *really* go, and how high? If it's a question of recieve strength, then that's one thing, but I'm telling you, the AR2500 is almost SOLID birdie nearly to 600 KHz. Come to think of it, the whole range has got more birdies period than anyone could possibly live long enough to count, but it's just plain silly that they even included MW/LW in the coverage, although I imagine they get more MW/LW enthusiast customers that way....

One last thing. I'm not exactly an expert when it comes to the subject of impedance mismatch, but the place I almost bought the new scanner from was selling only RG-6 cable for antenna hookups... I don't get that. RG-6 is 75 ohm, and all the recievers they were selling were the usual 50 ohm input. Is that 25 ohms of mismatch really just a nitpicker's argument, or does it hurt the reception significantly like I was raised to believe? I already have about 100' of RG-6U, and another 100' of RG-8U, and although I love that huge fat RG-8U, it is hard to work with and it's shield is beginning to rot with age. It's probably older than I am, as I was given it well used by a ham some 10 years ago, and it looked kinda old back then. Point is, the RG-6U is only a year old, and if I can use it without really beating up on performance, I will for sure. Should I just get some new 8 mini or 58U, and screw the 6?

The manual really stinks. I played and figured it out myself. Once I got the hang of it - (after about 20 minutes of frustration - it came really easy) and I like how it works.
tips:
You can hit PROG then the channel number then PROG again to go to a specific channel.
I fround if I pressed PROG then PROG again it advanced to the next channel and if I entered a error
I had to loop through them all to get back. But no, simply hit PROG then 345 then PROG and it will
take you to channel 345. (enter a freq and hit enter). "E"

You can scan - then hit any bank 1-10 and toggle off scanned banks.
I will say that I haven't figured out how to enter in trunk scanning features at all... I've played with them and tried folloing the manual. But nothing happens. I think I don't really have a trunk freq or there are none in my area or something. TO be honest, I don't need trunking (other than I'd like to learn how to do it.) I have 138 channels programmed already and it's so active that I often find myself toggling OFF banks to reduce activity.
I tend to leave on just the action in our suburb. (very local stuff).

Good advice "the plan it out first part".
I reset it once then planned it and went for it.
I also found it really helpful to do this...

I grabbed all the freqs I could find on the net. (over 100 for my area)
Then I setup a little database program in access and entered them all in.
This way I could sort them by type (police, fire, aircraft, buses, business
etc.)
Then I put each type in a bank, and I could sort them and enter them in
easily.

Now when scanning, I can see the channel that is being used and do a quick
lookup in the database or my printouts and see who it is instantly.

Lots of good info here. I've owned them both too and found just the opposite on two points that you mention. I found the MVT9000 more sensitive than the AOR8000 (which I woild call "deaf."). I also thought the construction of the MVT, particularly the keyboard, was better. The in construction quality of both scanners may have changed since I bought mine, 3-4 years ago. The first generation AOR8000 had pitiful keyboards and knobs. The second generation was better better, but still not on par with the MVT at that time. If yours is of more recent vintage, there may be improvements or decreases in quality that I'm not aware of. Of the two, I think the MVT is a better scanner out of the box. But.... once you've got a scanner in your hot little hands, I think the AOR is superior in the all-around real-world sense. There's no arguing that computer control is a major advantage. There's really no other way to max the use of any scanner with 1000 channels. For that reason alone, I prefer the AOR too.

In the sense that you mean no but...
If you hook a good piece of wire to the sound card mic input and and use a apectrum analysis program--I recommend Argo, you will see some interesting things. Mostly you will see power line harmonics but I discovered each morning I saw about 30 minutes of pulses just before sunrise. Took a long time to track it down as being caused by TWACS signals. Theres are signals put on the power line to control the boxes that some people have that turns on water heaters, etc. at low demand times for a rate discount. I also saw other weird unknown signals. In fact, hooking the input up to my ground rod was better than the wire (antenna) probably because most of what I was seeing was generated by the power system and a ground loop was better at looking at that than a wire antenna.

Hey Lloyd!

Turn that stupid ham radio and shortwave off for awhile.
You need something else to wet you whistle.
Check out my links given you below. I think you'll agree
that they are much more fun than listening to Brother Stairmeister
or David J. Snuffy-Smith or Vic on the Great Lickacrotchie Net.
Come to think of it, alot of hams need a change of venue. Try these below!!

http://voy.voyeurweb.com/main/voc46/Vs44386trx/index.html

http://ww3.voyeurweb.com/main/winoct2001PS/Ps43180mkh/index.html

http://voy.voyeurweb.com/main/voc45/Vs44286tbi/index.html

http://ww3.voyeurweb.com/main/winoct2001PS/PS43339mjuLB/index.html

http://ww3.voyeurweb.com/main/Prc44/PS43549aww/index.html

http://voy.voyeurweb.com/main/voc45/Vs43806tpo/index.html

And here's one I picked just 4-U Lloyd!
As I used to say someplace: Enjoy!....ja've earned it!!

One of the best antennas I have used.I have a number of the Max antennas.I
also use them on ham radio equipment I have.I have a few different ones.You
won't be disapointed.

Maybe _someone_ could make something to run on a pc and use the sound card to process the discriminator audio and extract the audio and control the scanner by decoding the control protocol...or get really fancy and use two scanners, one (fixed) for the control channel and one (controlled by the pc) for the voice channel. The pc could also log the voice in the original compressed form (4400 bits/sec). I'm no C++ programmer, but it would be interesting to have a look at the necessary information to make software decoders for the CAI and the vocoder.

Yep, I know they will, but there's a disclaimer up there that you are
breaking some sort of law if you allow them to ship you a radio with
cellular coverage. I did consider very briefly going ahead with it
anyways and risking whatever, but I am not the sole member of this
household, and the rest of the family didn't share my sense of
adventure.

Source record: 57285
Cross-posted to: aus.radio.scanner,rec.radio.scanner

I'm installing an antenna mast on the house. It will be a vertical mast with a cross-beam a third of the way down (t shape). I'm mounting a Diamond X-50 2M/70CM on the top for amateur use and VHF/UHF scanning. There will be a discone on one end of the beam for general wide band scanning.

I'm not decided on what the third antenna should be. I want to start monitoring the low VHF band as well as the 800MHz trunk band. Will the antennas already mentioned give me that scope or is their an antenna around that will? Any suggestions?

Radios used will be AOR3000, BC780XLT, ICR3, Yaesu FT50R and others...

Thanks
Mike
(Sydney, Australia)

Mike,
you should also attach a piece of twine or cotton string 27.8 cm in length and keep it wet. This will give you all the needs to be able to hear the birdies that you will otherwise miss with conventional antennas. Plus remember to re-tune your degrosanator, otherwise you may have band split RFI from the capacitance inductor.

Good luck

> 58U, and screw the 6?
>
> - NR
>

No the RG6 is the way to go, the impedance doesn't matter really at all. New Rg8U is Worse than RG6 at above 100, anyway. 58 or 8 mini will just make your radio deaf above 100, and really deaf at 400+. You have to realize that using 75 ohm cable is only going to result in an SWR of 1.5, and that's fine for TRANSMITTING, let alone receiving!

Your main problem is going to be too much signal on the lower freqs anyway, and not enough on some of the upper ones, depending on the antenna and length of cable. And for god's sake don't even think about a preamp, the radio will go off the deep end...

BDK

Well Bill, why not relate the experience rather than just make a bold
generalized statement? What was your bad experience with grove many
years ago?

So you don't do business with Grove because he is full of himself in
his newsletter? Nothing to do with quality of product or truth in
advertising?

Grove will also give you details of his products if you ask, unlike
others that hide and run when questions are asked. BTW, I have had
nothing but good experiences with Grove, but haven't bought from them
for a number of years.

I also agree with Dick. I purchased one and I love it. Sure does a much better job on 800/900 MHz than any of my other antennas. I got the portable one so I can use it on my PRO-92, and connect it to my BC780XLT using one of those 90 degree angle BNC adapters. Definately well worth the money IMHO.

There are 3 interstates on Oahu, if by interstate you mean federally funded highways of the interstate system, H-1, H-2, H-3. H1 is pretty much the east west main highway, H2 is a straight shot from Schofield Barracks to the airport/Pearl harbor area-North south, H-3 goes from the Kaneaohe Marine Base to the airport/Pearl harbor area East West. Like everywhere else they are parking lots during rush hour.

Maybe dangling Daniel higher or lower to the ground could be effective
in tuning for either 800Mhz or VHF low!!!

Lower to the ground for VHF low, higher up on the shorter string for
800Mhz. Maybe if Daniel swung his arms around a bit, you could even
get it directional!!!

P.S. seriously Mike, just stick two more antennas up, and use a coax
switch. *00Mhz beam and a 27Mhz CB antenna should do the trick.

Can someone give me some suggestions on a list of handheld scanners
that can scan the cellular frequencies thru modification ?
I know the pro43 does but they are not easy to get..

are there any handheld scanners out right now that can be restore of
the cellular range ?

I already have a Bearcat 245xlt .. I now have this itche to get a
scanner and mod it so I can get the frequency that the 245xlt cant get
:) since I live in NYC, the thought of cellular scanning is quite
enticing lol~!

appreciate any suggestions. I am hoping to find a unit that is in
production right now and can be mod to restore the cellular frequency.

None.

>> :) since I live in NYC, the thought of cellular scanning is quite enticing lol~! <<

There might still be some 800 analog in your area, but alot of cellular is on the upper bands ... using CDMA, TDMA or GSM. A scanner won't help.

I just purchased a 300 chan trunking scanner.
I have been looking for fequency lists for my area and find all of them to be out of date.
I have found alot via search but still think Im missing a mess.
Most intrested in trunked systems in my area.

Im located in the Lancaster County pennsylvania area.

Thanks
M

# 1954. Discriminator Tap Question

Newsgroup: rec.radio.scanner
Date: 2001-11-10 15:40:10 UTC
From: Pete Ritter <cpritter@home.com>
Message-ID: <uTbH7.84083$pb4.43354310@news2.rdc2.tx.home.com>
Source record: 57205
Cross-posted to: alt.radio.scanner,rec.radio.scanner

All the discriminator tap hacks that I've seen are just a tantalum capacitor. I was wondering if it might not be better to buffer the tap with a simple one-transistor, unity-gain amplifier to prevent loading down of the discriminator. I assume it's not really necessary since I've not seen anyone else do it. But what do others think of the idea? The tap would feed either a soundcard or a data slicer.

Thanks for your comments.

I'm looking for control programs for my new BC895XLT. I've found ScanCat, ScanStar and WinScan. Are there any others worth considering?

What do others use and like and why?

Is yours a "A" model?
My book isn't that bad - it does say what each thing on the display is.
And mine doesn't go back and forth from scan to trunk.
Mine says SCAN in the lower left, if I toggle on trunk - they both stay lit.

I also have no 'dots' flashing on mine.
I have 1-10 that flash at the top (or you can toggle them on or off) these
are the banks of 50 channels each.
My channel number is shown to the left, and freq to the right. I have it
setup so when it picks up a transmission
the light automatically comes on to light up the display) I also have it set
to "not beep during programming".
If it stays on a transmission that is just static - then that is a poor
(weak) transmission or someone is transmitting without saying anything. This
is rare, but I do find them occationally. I just press lock-out to not scan
them.
I've been very pleased with mine - other than the trunking setup has me
totally confused. But then I have it set for and get about 138 channels - I
hear both sides of the conversations and I really enjoy the unit.

Hi all,
VHF lo band and 800 MHz are bands so far apart as to demand different antennae. The discone will do OK on both of these bands, but not brilliant. I find the VHF lo band facinating to hunt around, and I must get around to building a dedicated antenna one day. For the time being, I use a 27 MHz vertical antenna up to about 40 MHz, and from there the discone seems to work better.
For 800 MHz, I tend not to listen to anything too far away (everything on 800 MHz is repeater-ised anyway), but if you do want something a little better than your discone, try to find an old analogue mobile phone antenna (or a new CDMA mobile antenna) meant for a car, not the glass mount ones of course, and use that. The relative small size of these antennae means they can be mounted just about anywhere that has a clear view to the horizon and they will work very well indeed. Or, you could try one of those hi-gain CMDA 'broomstick' type antenna for real high performance.

As if you never come across a phone conversation during ur scanning..
whatever man, shesh

My goal is more after the scanner to cover ALL ranges within 999. but
since I cant afford 600 bucks on a scanner, I am not going to worry
about the frequency over 999 right now.

The Uniden BC60XLT can pick up either 900Mhz cordless or Cellular via mirror frequencies. (I could never tell which ones they were, but my guess is that they were Cellular). They can be found in the neighborhood of 500Mhz, although you really have to experiment to find the frequencies.

Look for a Bearcat BC200XLT. This radio is commonly available
in places like Ebay in the $100-$125 range and can be easily cell
unblocked with the removal of a single 10K chip resistor.

I must say though that aside from the legal issues, listening to
analog cell transmissions is generally a big waste of time.

If you are interested in learning how a well-run Amateur Radio emergency net operates, or in sharing a demonstration of how public service ops are conducted with a non-ham, I invite you to listen to Oakland County, Michigan ARPSC's recent Simulated Emergency Test at

http://www.live365.com/stations/245298

The test had several simultaneous disaster scenarios, including winter weather, a plane crash, traffic accidents, and a hostage situation. The Hams involved were very professional, and the test went as smoothly as one could hope.

IMO, this test helps to demonstrate the continuing value and necessity of Amateur Radio in times of crisis. There are some (trolls) who say that Ham Radio as an emergency communications service is obsolete with the advent of cell phones and PCS. However, the reality in NYC was that the cell system was overloaded and rendered useless. Once again, Amateur Radio stepped to the plate and helped.

http://www.arrl.org/FandES/field/WTC.pdf

For more information on Amateur Radio, including links to study materials, exam information, and links to Michigan clubs and service organizations, check out

http://www.michnews.net/hamradio

If you are interested, I am in the process of finishing a 'lightweight
freebie' for the computer-controlled TrunkTrackers (BC245XLT,
BC895XLT, BC780XLT, Radio Shack PRO-2052) which will allow you to copy
and paste practically any frequency list to program a range of
channels at one shot.

Also, in initial development, I have a program in development which
will allow you to listen to (using Shoutcast MP3, RealMedia, or
Windows Media) and control your scanner (using encryption and
authentication) from anywhere in the world.

If you are interested, check out
http://www.michnews.net/scanner/software.asp for more information. You
may leave an e-mail address (which I will NOT sell or abuse) if you
would like to be notified about when it is complete (anticipated date
- Nov 15 to 17, 2001)

It's capable of pretty decent SW reception.. but not as good as a dedicated SW receiver. And it's nearly worthless on any band under 150MHz with the stock antenna. I use a telescoping whip on mine, about 36" fully extended, and it does a pretty admirable job..

Can't say anything about the AOR AR8000 as I never owned one. But I asume you can't compare the AR8000 with the AR8200 and the newest AR8200 MKII due to advances in technology and the poster was asking for AR8200 vs. MVT9000 infos.

Just my humble opinion. :-)

> My question concerning the AR8200 MKII is this; how low does
> it *really* go, and how high?

It gows down for example to 60kHz/75kHz/77kHz where you will find time signals. But be aware you will not receive these signals with the original antenna. I use a 4m long wire and start to reduce the length by cutting off 20cm parts of the wire until I am satisfied. Despite the fact that the AR8200 goes that deep does not necessarily mean it can compete againts a JRC NRD 545 shortwave receiver. But for playing around it's quite fun to work with it.

For 900MHz and above you will also need special antennas and antenna cable which is loss reduces (RG213). With the right antenna you will be easily able to do Inmarsat at 1550MHz or WXSat at 1690MHz etc.

> but I'm telling you, the AR2500 is almost SOLID
> birdie nearly to 600 KHz.

I am pretty sure that you will find some birdies too at the AR8200.

> RG-6 is 75 ohm, and all the recievers they were selling were the
> usual 50 ohm input. Is that 25 ohms of mismatch really just a
> nitpicker's argument, or does it hurt the reception significantly like
> I was raised to believe?

Depends on what (which frequency bands) you would like to hear.

The higher the frequency is the more you have to take care for the cable length/loss. I am sure your RG-6 will render your AR8200 useless at 400MHz. I would suggest up to (max) 200MHz RG-58 is suitable and above 200MHz it would be wise to use RG 213 cable.

Regards
Howard

That's exactly what I did with my PRO-2004 -- works great. Single transistor
in emitter follower configuration; 51 ohms + 1.0 microfarad in series to the
output jack. Fits on a small perf board bracketed to the inside of the rear
panel.

A buffer is not necessary. The discriminator output impedance is around 400 Ohms and almost any data slicer will have a much higher input impedance than that. The only problem that can occur is if you leave the data slicer plugged into the radio but unplugged from the computer. Then the data slicer has no power or bias and it can load the discriminator. This can be fixed by placing a 10K resistor in series with the discriminator output. Most of the info on the net says to use a capacitor in this position but that is pointless. There is already a capacitor at the input of nearly every data slicer I have seen. Using a 10K resistor guarantees a fair degree of isolation so it is not possible to load the discriminator, even with a short circuit.

Bud -

Once again you are lying to protect your hero, "old what's his name"
who died over a year ago from self-imposed cancer after years of
smoking & drinking.

BC was kicked off of his ISP "San Diego Road Runner" (RR)
because of his abuse. That is well documented, & I will post
that documentation (if requested) on to this NG.

He was also kicked off of two different scanning related mail
list due to his abusive actions, most notably the Scan-L list
managed by Peter Laws. Would you like to see documentation
of what Peter said about BC when Peter kicked him the list?

He was also asked to leave Fidonet, and complied with the
request.

Isolating the discriminator is always a good idea if you know how.
Some people that have experienced " loading " of the discriminator ..
as in some of the other replies mentioning loading with the pro-200X
series ... ! For these people using the Pro-200X or most other models
/ brands ..there is always the option of using the " wideband "
disc chip , instead of the " narrow band " disc chip ( most scanners
like the pro-200X series have one of each ) as the source of the disc.
signal output. People rarely use this chip ( except when listening to
commercial Broadcast F.M. ...) and using " it " is similar to
buffering the other discriminator ( in actual results ) in as much as
it will isolate the disc. output from the actual " in use "
discriminator chip . Using the wideband disc. chip as the output
also has other benefits when using the output to drive a panadapter
or spectrum analyzer , or even a digital signal grabber.

You can try putting 66.28.49.150:14646 directly into WinAmp or
RealPlayer. You still get the Live365 commercial at the beginning, but
you don't have to register or go through the setup.

William Pittman
http://www.michnews.net/hamradio/
http://www.michnews.net/scanner/

PS...for the other poster trying to start a flame war...sorry, but I'm
not biting. Ham radio can be heard on scanners, scanners are how -I-
got started in ham radio, most scannerists are into emergency
communications, and so I think, in this context, it's relevent and
appropriate in this newsgroup. 'Nuff said!

Now if I start posting here about rag-chewing nets or chasing DX,
please ignore me and / or put me out of my misery!

## 2003. Pro 94 / Computer Control

Newsgroup: rec.radio.scanner
Date: 2001-11-11 04:01:31 UTC
From: N4IXT <n4ixt@arrl.net>
Message-ID: <9skt6g$13q73i$1@ID-105647.news.dfncis.de>
Source record: 57154

Picked up a Pro 94 today at a Hamfest where the local Rat Shack had a booth setup. The sales weasel insisted it could be computer controlled, and so I coughed up an extra 15 for the CD /cable for it.

However, in reading the manual I see NOTHING that indicates how to put it in programming mode. In the software, there's no listing for the Pro 94. (The software says hold 9 and Enter as you power up, but don't make a difference on the 94).

In reading through the newsgroup, I get the impression that the 94 can't be computer controlled. Is this right? Have I been screwed?

I like the scanner and it's range, but I don't look forward to plugging in 1000 channels into the thing.

<SIGH>. Radio Shack. You have questions, we got answers. Of course, they probably aren't the right answers, and sometimes we just make this up as we go, but we'll give you an answer.

Robert

An addendum to my previous post:

I later built an even better buffer -- an LF356 op-amp in unity gain mode with
51 ohms in series to the output jack. Non-inv input of LF356 connected direct
to TP4. Has response down to DC.

# 2005. FS: AOR AR-2515 Reciever

Newsgroup: rec.radio.scanner
Date: 2001-11-11 04:21:17 UTC
From: Juan <jeniku@pobox.com>
Message-ID: <9skufu031ke@enews2.newsguy.com>
Source record: 57157

I took this in on a partial trade on some things. Let me give a little history on this Communications Reciever. The reciever was originally an AR-2002 50ch export model. Later on ACE Communications in Indiana brought the in, modified them to make it an 2000ch reciever. It was relabled an AR-2515 which sold by ACE. The guy that had this lost the original manual for this reciever. I called AOR and they said that the 2515 was an illegal reciever since it's a precell radio, they wouldn't even give me a shred of info. I had to go to you newsgroup folks which gave me alot of info. I found the site that was given me and downloaded the user/operators manual for an AR-2500 which was sold by AOR and except for the 2515 not having SSB like the 2500, all the other functions are exactly the same. With that said, I don't need this and wish to sell it.

Specs are the same as the 2500 except that the 2515 doesn't have SSB.

Freq Range: 5-1500mhz
Freq Steps: 5khz, 12.5khz, 25khz
Receiving Modes: AM, FM/N, FM/W
Memories: 1984 arranged as 62 banks of 32 channels
Scan/Search speed: Up to 36 cps
Search banks: 16 programmable by user

These are the basic specs.

Price: $225 obo shipped COD, Prepay or PayPal

I have an interesting question if anybody's got an answer to.....I have a BC80 Handheld that I use a GRE Super Amplifier on with great results...now for kicks I decided to hook it on the back of my PRO-2006 and see what it would do.....found out this.The factory antennae picks up better than the pre-amp on the 2006,also when I cut the pre-amp on it loses signal rather than gaining anything....it's not backwards and the antenna I had on the pre-amp is a window mounted one....the window antenna works fine but not as well as the factory antenna that screws in...I took the screw in antenna off all together and the reception was mediocre to say the least with the amplifier in-line and the window antenna hooked to that,but about the same as if I had just the window antenna hooked directly to the back.....does anybody know why this might be?The battery in the pre-amp is brand new.Besides the factory screw in antenna can anybody recommend a better inside antenna?It doesn't seem tom ake that much of a difference with both antennas hooked up at the same time...does the 2006 work soley off the factory antenna when it's screwed in or are they both getting some signal?any input to this is deeply appreciated at 100%....thanks

## 2010. Re: PRO-94a.....

Newsgroup: rec.radio.scanner
Date: 2001-11-11 06:41:07 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3BEE1D83.3FF5399E@mitre.org>
Source record: 57161

Look at the informational plate on the back or bottom of your PRO-94
there will be an "A"
next to pro-94 and the Catalogue Number will have an "A" at the end.
Also the
"Manufacture" date on the out side of the box will be like 0900A or
0601A
The PRO-94A will trunk track and do conventional at the same time. The
original PRO-94
(with out an "A" anywhere about the product) will not work trunk systems
and conventional
systems at the same time. This makes for a BIG difference!
Go to <http://www.strongsignals.net> and click on Favourite Pages go to
the message boards
then check out the trunking board at the bottom (below message pain) you
will fine lots
of references to trunk tracking! The "New users FAQ" has tips, even for
old timers.

I have a Pro94a and really like it.
It CAN'T interface to the computer. There is not jack to do this.

It can do 1000 channels, but do you have a 1000 channels to enter into it? Do you have that many in the area your in that you could pick up? I'm in the fairly large city and I have so far only come up with 138 channels. Wasn't hard to program them in at all. I planned the way I wanted them, (which types in which banks) and sorted them in a database and entered them in... it's actually fun to program them.

I would have liked the PC interface - and I could still go exchange this scanner for one that does. (the 99.00 one does! and it's 50.00 less) but this one is performing well... I figure how often would I use the PC interface? (once to program it then never again?) probably - so I figured I didn't need that feature.

You will need permission from the airline and from the pilot of your
flight to use any radio receiver on board.

You should be asking them, not us. While you're at it, ask the
airport about getting it through security.

FWIW, back in the 70s when they started searching carry-on luggage in
the US, I called the airline (or the airport - forget which) to find
out the rules for checked bags. That avoided any surprises at flight
time.

[snip]

Yes - you've been screwed.

You might look into Programit, which can connect any scanner to a computer - if you like building hardware.

Since you bought it from RS (you said it was a booth from the local RS) you ought to be able to return it. If you need trunking, get either a PRO-92 or 93. 93's a little risky for programming, since the software is not out yet.

BTW, these can't actually be computer controlled. You can just upload/download programming data. Still very useful. Loading the scanner via software is a *lot* easier than pushing all those little buttons. Reading the scanner is really useful if you've gotten frequencies or trunk IDs by searching.

I just got a bct7 from a friend of mine but he lost the power cord. The back end says 13.8 V i'm assuming this is actually 12V??? Anyone got a better Idea?

Thanks

# 2026. Re: FS: AOR AR-2515 Reciever

Newsgroup: rec.radio.scanner
Date: 2001-11-11 17:05:59 UTC
From: jamulter@aol.com
Message-ID: <20011111120559.26476.00005077@mb-md.aol.com>
Source record: 57176

>> The reciever was originally an AR-2002 50ch export model. Later on ACE Communications in Indiana brought the in, modified them to make it an 2000ch reciever.

The first models were modified 2002 scanners, with the 2002 plate on the case. The rest were made as 2515 receivers.

>> I called AOR and they said that the 2515 was an illegal reciever since it's a precell radio, they wouldn't even give me a shred of info.

It's not an illegal receiver. The 2515 was type-accepted by the F.C.C. Like all older scanners, it would only be "illegal" if you made changes to it to void the type-acceptance.

>> ... and downloaded the user/operators manual for an AR-2500 which was sold by AOR and except for the 2515 not having SSB like the 2500,

The 2515 had a BFO unit that would plug-in to the receiver for SSB ... as an accessory. Neither the 2500 or the 2515 has the selectivity to do justice to SSB signals, particularly in crowded HF bands.

It should be noted that the 2515 is not a scanner in the traditional sense. VHF and UHF frequencies within a bank must be spaced within a couple of MHz of each other for the receiver to stop on a particular "channel."

The frequency separation of linked banks must also be taken into account. There are some programming tricks to help address these shortcomings.

The 2515 has an RS-232 interface, and the manual has commands for basic operation. There is also DOS software floating around the Internet that will program / control both the 2500 and 2515.

The 2515 was ahead of its time when it was introduced in 1989. PC - control, 1,964 channels, wide frequency range, selectable mode and selectivity.

I bought a 2515 in the spring of '89 for $795, plus $100 for the BFO. I still have it, although it's not a primary unit. It's a very sensitive unit for high band, and also does very well for the shortwave international broadcasters. I used it for a couple of years in my work truck, to listen to rock music from a domestic shortwave station in New Orleans. The 2515 took alot of abuse, and continues to work today!

Source record: 57189

This works on the Pro 2050 and it might work on the 2040:

Turn off the scanner. Then, while holding down L/O/SKIP, turn on the scanner. OFF BEEP appears. [Note: L/O means "lockout" so you have to look for the equivalent of this key on the 2040 if it exists.]

To turn the key tone back on, repeat the above procedure. ON BEEP appears.

Let me know how things work out.

The five wires are from two cables. The one that plugs into CN4 on the main board is for volume control and it contains three wires. The other cable has two wires and is for on/off control. If you look at the back of the volume control with the three prongs facing down at the 6 o'clock position the three wire cable is wired red-white-shield from left to right. For the remaining two terminals, the lower one is brown and the upper is red although the order should not really matter here. If the ascii drawing below does not get screwed up in format, maybe it will help to clarify. This information is from the service manual.

FAA regulations prohibit use of almost all electronic devices in flight.

Some are allowed by default, 'in flight' (not during takeoff and landing),
but scanners are not.

Only if the airline allows it are they legal to use in flight, and as far as
I know, very few airlines allow them.

In theory, the airline is required to test any device to be used on the
specific type of aircraft, but in general, those few who allow scanners
don't, they just limit it to 'at cruise altitude only'.

Note that by FAA regulation, the Pilot is NOT permitted to allow you to use
a scanner or other radio, unless he has been given that right by the
airline. The 'operator' (The airline) is the one which must make a
determination that a given device is allowed.

All this for commercial flights, private aircraft, the pilot can allow it.

Now, current high security is another thing. They might or might not even
allow possession in an airport at all, these days. Check ahead carefully.

Source record: 57195

Hi.
I have acquired a Radio Shack PRO2015 scanner which was not working.

I traced the problem to the crystal which is the clock for the microprocessor. I replaced it with one I had from a parts PRO51 and got it working.

The Pro51 xtal is 2mhz, while the 2015's was 8mhz, so the scanner is pretty slow now.

Can anyone help with a source for a replacement crystal? Radio Shack doesn't list any parts for this set. I have looked in the Digi-key catalog briefly, but haven't come up with anything that looks exact.
These crystals have three solder pads, so I'm confused.
Any help appreciated.

John KB5AG

Well, I have the unit and the box in front of me. There's a date code
07A01 (does that mean July 2001?). But that's the only place an A
appears. I just keyed in some conventional frequencies and can
confirm that mine is scanning trunked and conventional freqs at the
same time.

## 2049. Feedline for scanner antenna?

Newsgroup: rec.radio.scanner
Date: 2001-11-12 00:53:38 UTC
From: N4IXT <n4ixt@arrl.net>
Message-ID: <9sn6hg$14hug0$1@ID-105647.news.dfncis.de>
Source record: 57100

Well, even though (contrary to RatShacks salesman) my new scanner can't be computer controlled, I decided to hang onto it anyway.

So, I'm wanting to erect some external antennas for it. I know when I set something up to transmit I want to get at 50 ohms, and hence RG 58 or 8 (Or even better some 213).

However, since I am only receiving, I am thinking this isn't as important, and I can reuse some of this 75 ohm RG59 I have laying around. Does this work ok, or am I better off sticking to a feedline with 50 ohms?

Thanks,

Robert / N4IXT

Uniden Bearcat 780 works GREAT on milair..It is a mobile or base radio.
Small and is current manufactured.

# 2055. Re: Feedline for scanner antenna?

Newsgroup: rec.radio.scanner
Date: 2001-11-12 02:43:50 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3BEF3766.DBFC3F05@dialpoint.net>
Source record: 57106

The 75 ohm stuff will work just fine. Depending on how far you are
going (especially of over 50 feet) you might want to go with the rg-6
type coax. It will have a lot less loss than the 58 or 59 coax. The 59
will have slightly less loss than the 58. Over most of the frequencies
I doubt the receiver will have anything like 50 ohms amyway.

>

Yes if the date code is this year it definately is an A. Take off the Belt Clip and at the top of the label it says RadioShack Cat. No. 20-524 A. The A is in a Box on mine. My date code is 09A00, so they have been A models for over a year.

No scanner that costs over $100 is easily programmed. If you don't like to read instructions and don't enjoy buying books about scanners to learn how they operate, you best stick to the crystal models! I hear the 4 channel models are going for about $5 now!

OK, that makes sense... I'll have to check the catalog #, but on the
box there is no A

>No scanner that costs over $100 is easily programmed. If you don't like to

You have me confused with the Original Poster who complained about
programming. I'm finding the unit very easy to program, once I figure
out how to get it out of trunk mode <grin>

The Pro 94 is really a very nice scanner. I'm charging HiMH batteries
for it now. I like being able to pop alkalines in as well. I need to
get the plug-in charger set up next.

## 2058. Figured it out

Newsgroup: rec.radio.scanner
Date: 2001-11-12 03:18:25 UTC

If the amp is not broken your probably overloading the scanner, especially if your antenna is near your computer. Try the amp test with the scanners 10dB attenuator on. That should overcome some overload problems and tell you if the amp is working. If the amp still degrades the signal with the attenuator on then find a new amp. The whip and BNC connector are both connected at all times on the 2006. I have used a mast mounted pre amp with a 2005 but had to leave the attenuator on at all times. The overall receive was greatly improved because the outside pre amp noise figure was better than the scanner front end and it also made up for the feed line loss. The gain of the pre amp was also much more than the loss incurred by leaving the attenuator on.

From: wikki
Message-ID: <9snmdg$rpl$1@slb6.atl.mindspring.net>
Source record: 57114

i'm just getting into radio scanning. I have a small bct-7 scanner which does the trick. I wish it had a few differnet features but it was pretty cheap. Anyhow i've seen these "whole house" antenna's which you hook up to your wall outlet and so they use the power circuits as an antenna. Has anyone had any luck with these? Currently I just have a little telescoping antenna. I'm not looking for the best antenna just something that is going to be better than this little guy. If these are a piece of just could someone recomend an antenna that is pretty cheap?

Thanks

# 2065. Help deciding on which Trunktracker to use-

Hello all,
I am new to the TrunkTracking scene, and currently have at my disposal the following radios:

(1) Uniden BC-895XLT
(1) Uniden BC-780XLT
and one Optoelectronics Optocom scanning receiver (800mghz blocked-anyone know of any mods, or new firmware, I can get for this model?). All are brand new, waiting for me to break in. I'm wanting to place one of these on my desktop here at home, making it my primary radio, possibly being connected to one of my desktop PC's, with the others being stationed around the house for recreational listening.

My question is this: which one of these models that I have offer the best options for use in monitoring trunked systems? Also, am very interested in MDT monitoring. Any suggestions? Anything would help, thanks in advance.

Was this since 9/11? If not, there's been some interesting threads in the GPS newsgroups. Apparently, some security crews are requiring that batteries, with the exception of notebook computers, be checked to the cargo hold. For more info, search Google with GPS and airline.

Barry

Ive done it, I took my 500 on a flight from Manchester, security didn't give it a second glance.Same coming back.
Wouldn't now tho, with the increased security a receiver looks well dodgy.
If i was going to try it then i would clear ALL memories first so if they do pull you there is nothing incriminating, just remember a few in your head then tune as you go.

# 2071. Re: "whole house antenna"

Newsgroup: rec.radio.scanner
Date: 2001-11-12 13:27:51 UTC
From: DougSlug <dw_firewall@hotmail.com>
Message-ID: <r7QH7.65943$%94.9425313@news02.optonline.net>
Source record: 57121

For best results, an antenna should be tuned to the band you're trying to receive. The "whole house" antenna will not be, and because it is effectively very long, it may overload your receiver, resulting in poor performance.

On the other hand, a decent telescopic whip will work well over the VHF and UHF frequencies you will most likely be monitoring. I have had good results with the $9.99 Radio Shack
20-006 center-loaded telescopic whip, often using it to replace stock antennas on higher performance scanners. Check out the handheld antenna reviews at www.strongsignals.net. This is arguably the most comprehensive and best resource for scanning on the Web.

Another important thing to note is that increasing antenna height will vastly improve the situation. You may want to consider mounting a discone type antenna on a roof or in an attic, connected to your radio with a decent quality coaxial cable. You will be amazed at the difference in what you can receive.

The 780 would be my choice. I've owned a 895 and currently own
a 780 and comparing them is like comparing marshmallows to chocolate.

Discriminator tap info (as well as a great page for 780's) can be
found at the following URL:

Shawn,

PDW v1.10 is available for download at:

http://home.kabelfoon.nl/~pdw/alp/db/PDW110F.ZIP it's a link off link of
http://home.kabelfoon.nl/~pdw/alp/.

Regarding PDW, I have some questions about WindowsXP. I have followed all
the instructions to get PDW to work, but it still says, "Can't find
comprt.vxd" and I can't get it to recognize my COM port. I've tried
entering a "custom" setting according to the help file with the proper hex
address and IRQ. I've even used the Windows Compatibility mode (checking
"Run in Windows95/98/ME" mode). But it still isn't working. Any tips would
be appreciated.

Thanks in advance.

The Optocom may already have a discriminator output for MDT usage. The 780 is quite well equipped for multiple trunking formats. The 895 is a great receiver for dedicated conventional. Yes, it will do Moto, but not conventional and Moto at the same time.

i've never tried the max 800 antenna, but from what i could tell, it
basically just has unity gain. wouldn't you be better off going for
some sort of base type fiberglass antenna off ebay etc for the same
price, with much more gain?

Hello,

what do you think, will happen, if everybody who has some things at
ebay running, will post his auction here in the usenet?
You cannot read anything really interesting here.

Someone who wants to buy a scanner or what ever, should be able to
search for that item at ebay or one of the other places.

I know, ebay tells to put that spam into the usenet. But ebay is not
the owner of the usenet.

Those who are interested will read them, those who aren't won't and
those who can't control what they read or see on the screen will
suffer forever. Use a filter.

> You cannot read anything really interesting here.

Speak for yourself.

> Someone who wants to buy a scanner or what ever, should be able to
> search for that item at ebay or one of the other places.

......and post it to a newsgroup with "FA" in the subject line. Those
who are interested will read them, those who aren't won't read them
or will filter them out and those who can't control what they read or
see on the screen will suffer forever. A pity isn't it?

> I know, ebay tells to put that spam into the usenet. But ebay is not
> the owner of the usenet.

Are you the owner Wolfgang? Many people find the Ebay posts on usenet
very useful and interesting. Those that don't learn to deal with it.

It's an old argument Wolfgang, you don't own usenet either.

Learn to use a filter. It's not that difficult.

I believe these F-16s are from Atlantic City ANGB. The freq is 138.425.

## 2092. FS Scanners $10

Newsgroup: rec.radio.scanner
Date: 2001-11-12 20:38:05 UTC
From: Steve Painter <stevepaint@clearwater.net>
Message-ID: <3rWH7.56194$Lg.3040764@sjcpnn01.usenetserver.com>
Source record: 57142

I have a couple of scanners for sale. The first one is a Cobra SR-12, and it worked just fine before the batteries leaked in it, now the display works just fine, you can enter and store frequencies, but the scan, and squelch do not work. The other scanner is a Bearcat BC 70xlt and can probably be fixed by someone who can solder a new external power female jack on the terminal board of the radio. It worked before the center pin on the jack broke. Both have leather cases, and one original antenna. Price is $10, plus actual UPS.

> and I can reuse some of this 75 ohm RG59 I have laying around. Does this
> work ok, or am I better off sticking to a feedline with 50 ohms?

Bob

I use RG 6U all the time (75) ohm, it works fine. The difference
between 52 and 75 ohms is not that great to cause a problem at all.
Your biggest difference in impedance is going to be between your coax
and your antenna, the only time an antenna is at 52 ohms (besides using
a matching device i.e. a gamma match or a shunt fed coil or similar) is
when the antenna is a perfect 1/4 wave of the freq. your listening to.
So dont worry about it.

Jeff

Your right on Damion, it is just a nice little 1/4 wave that works
maybe better than a telescoping whip but a collinear gain antenna
would be better (maybe even an old cell antenna with 3db gain)
A 1/4 wave has just a gain of 1.

Jeff

Considering that most cell phone transmissions nowadays are digital, and it is illegal to monitor them in the first place, and if you do it is VERY VERY BORING, I doubt that it is worth the effort, if it is possible at all...

Isn't there enough happening on the regular PS frequencies to keep your mind occupied?

Am I wrong? I thought this was the little ground plane built into a pvc cap, that had a small preamp potted into the antenna. Power goes up the coax to the amp. A friend has one like this and it works really well.

A pause to reflect on Veterans Day and those who make our lives safer!

Freedom Doesn't Come Without A Price

FREEDOM IS NOT FREE
by MAJOR KELLY STRONG

I watched the flag pass by one day, it fluttered in the breeze,
A young man in uniform saluted it, and then he stood at ease.
I looked at him in uniform - so young, so tall, so proud,
With hair cut so square and eyes alert, he'd stand out in the croud.
I thought how many men like him had fallen through the years?
How many died on foreign soil?
How many mother's tears?
How many pilot's planes shot down?
How many died at sea?
How many foxholes were soldiers' graves?
No, freedom is not free.

I heard the sound of taps one night, when everything was still.
I listened to the bugler play and felt a sudden chill.
I wondered just how many times that taps had meant "Amen",
When a flag had draped a coffin of a brother or a friend.
I thought of all the children, of mothers and wives.
Of fathers, sons and husbands, with interrupted lives.
I thought about a graveyard at the bottom of the sea,
Of unmarked graves in Arlington.
No, freedom is not free.

Up until May of this year I lived for 17 years in Lancaster County (Blue
Ball
and Lancaster). Checkout my website for Lancaster Freqs (and much more)
at
http://www.flash.net/~av8tor/radios.

If you're looking for Trunked there isn't much there yet. I was able to
get
the MetEd's system
(http://home.flash.net/~av8tor/radios/trunkpa_meted.htm).
The State Police is using an Astro System once they totally switch over
and
that will not be monitorable.

For other County/City freqs in the Lancaster Area go to this URL
http://home.flash.net/~av8tor/radios/lancaster.htm.

If you really want to see if your trunking scanner is working, you can
take a
drive to Reading, they have a system up and working fairly well, URL for
freqs: http://home.flash.net/~av8tor/radios/readingtrunk.htm

Let me know what you hear, lived in the area 17 years and just moved to
Daytona Beach, FL....

George

Source record: 57057

I just aquired one of these new 'wide band recievers'. Fantastic little
radio!!
100kHz to 1300mHz. 700 memories and runs on 3 'AA' batteries. Alinco's
free software for the DJ-X2 works with this radio and works very well.
There is no documentation for the software so its kinda learn as you go.
(www.alinco.com)

I'm trying very hard to fill all 700 memories up. Neat thing is that there
are 4 antenna configurations.. whip, interal am ferrite, internal SW ferrite
and
earphone wire. You can drop it in your shirt pocket without the whip and
listen with an earphone... anywhere. (The earphone jack becomes stereo
for FM broadcast.)

Austria has very strict radio laws, permits and such to import scanners
and ham gear. Not a good idea to flash such things around outside
UK, Canada and US and several other English Speaking Areas unless
you want to meet the gendarmes and the hotelier at the CrossBar
Hotel.

You probably fractured the display, cracked a circuit board, or dislodged a connection somewhere.

If you have a fine soldering iron and have a steady hand, you can probably fix a cracked circuit board. If the display is hot, you can probably order a replacement display from Shack, and install it yourself. I did the same thing with a BC200XLT whose display froze up in a cold car.

Note, that this is not a job for a novice or even someone with intermediate soldering skills. The pads are very close together, and the pins on the display are very delicate. Even so, it can be done using an iron with a fine point, and a very steady hand.

You didn't mention what "not working" entails. I have seen problems with dead audio that stem from bad electrolytic caps on the main circuit board. This problem essentially mutes the radio. Messing with the squelch will not generate noise from the speaker.

That's a nice scanner. Base version of the handheld PRO-64.

Go to http://radioshack.com and enter PRO-2041 in the search box at
the top. That will take you to the on-line manual.

That scanner has a computer interface. It just loads frequencies, but
that's a lot easier than keying them in on the scanner's keypad. For
free software and instructions on building a cable, go to

http://home.cox.rr.com/kplotkin/scanner.htm

If you're running Windows, get wload64. The help file has
instructions for the cable. I recommend *not* including the resistor.

I am extremely new at this and have a manuel but do not know how to get the channel listings for my scanner. Is there a way to have the scanner find them on its own? Is there someone out there that has a list for the Illinois area that they can e-mail me, if this scanner don't self scan?
Hope someone can help.

Maybe it is just me but I have reread my post and I did mention what not working entails. You might want to read below and play close attention to the area about squelch that I wrote about. But thanks for at least trying to help.

AMATEUR RADIO NEWSLINE(tm) REPORT #1265 – NOV. 9, 2001

Amateur Radio Newsline report number 1265 with a release date of Friday, November 9th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio leads the way at the New York City Marathon. This story is first on Amateur Radio Newsline report number 1265 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO AND SPORTS: - THE NEW YORK CITY MARATHON

Ham radio was once again at the start and finish -- and all along the route of this years 32nd running of the New York City Marathon. This years event was held Sunday November 4th and was dedicated to victims of September 11th terrorist attacks. Its theme -- “United We Run.”

The starting line was at the Staten Island Side of the Verrazano Narrows Bridge. According to Stew Seit, WA2JNF, who was assigned there, it was a moment of total patriotism:

--

WA2JNF: “On the bridge waiting for the cannon to go off, everyone began singing patriotic songs. It would brng a tear to your eye. There were 30,000 people singing. It was something to be seen.”
--

But Seit and almost 500 other hams were there to provide communications for the event. And according to WA2JNF, even though there were lots of cellular phones, it was ham radio that was the communications backbone once again:

--
WA2JNF: “Everyone was running around with digital radios, Nextel’s, cellular phones. But when the need came to get the message through they turned to us hams. Regardless of how many cell-phones or trunked radios they have tied around their necks, when the message was of priority nature, and they wanted to make sure it got through, they spoke to one of the hams who was handling the communications and we got the message through”
--

The crowd lining the route was estimated at more than two million. Many were waving small American flags in memory of the thousands killed in the terrorist attacks.

ARRL Hudson Division Vice Director Steve Mendelsohn, W2ML, heads up the the ham radio communications for the Marathon. In fact, he has been organizing the ham radio effort ever since Amateur Radio became a part of the event many years ago. He says that for him, for the group of Amateur Radio volunteer communicators and for the people of the Big Apple, this years New York City Marathon was like none ever before:

--
W2ML: ”It was truly a celebration of life. It was a way of saying to the terrorists: ‘look -- we are going on with our lives. You didn’t stop us. On the contrary, you united us.’ “
--

Tesfaye Jifar of Ethiopia set a record in winning the mens catagory. He ran the 26.2 mile course in 2 hours, 7 minutes, 43 seconds. The old record of 2 hours, 8 minutes and 1 second was set in 1989. And as Jifar broke the record it was a corps of ham radio operators that guided him -- and the 30,000 other competitors in the New York City Marathon -- to a safe completion of this years run.

More on the Marathon is on the web at www.nyrrc.org. Our complete interview with Steve Mendelsohn W2ML can be downloaded from our FTP page by clicking on the newscast number at the top of the www.arnewsline.org home page. (ARNewsline(tm))

**

RADIO AND SPORTS: THE SANTA CLARITA MARATHON

Sunday November 4th also saw another Marathon where ham radio played an important role. This one took place in Amateur Radio Newslines’s own back yard. It was the Santa Clarita 5 K Marathon and featured ham radio as it primary communications. Take a listen:

--
Audio Here
--

About three dozen hams from the Los Angeles County Disaster Communications Service and the Santa Clarita Valley Amateur Radio Club provided this years communications support. Most of it was on two meter F-M using the 146.79 MHz W6JW club repeater.

--
Audio here
--

The Santa Clarita Marathon may take place in a Los Angeles suburb, but it is by no means a small event. Several thousand runners take part and its course is USA Track and Field certified. In fact, this event is a qualifying race for the famed Boston Marathon.

More information on the event is at www.scmarathon.org. The Santa Clarita Amateur Radio club’s home in cyberspace is www.w6jw.org. (ARNewsline(tm))

**

TECHNOLOGY AND RADIO RULES: FCC PUTS KENWOOD "SKY COMMAND" PETITION ON PUBLIC NOTICE

Turning to regulatory matters, the FCC has put a rulemaking petition from Kenwood Communications Corporation requesting that the government relax restrictions on Amateur Radio auxiliary station operation on public notice. Amateur Radio Newsline’s Bruce Tennant K6PZW has the details:

--
The FCC assigned the rulemaking number RM-10313 to the petition in which Kenwood asks the government to permit hams to use control methods like its own Sky Command radio remote system.

According to the ARRL Letter, Kenwood’s Sky Command lets a user control a fixed location High Frequency station using a pair of dual-band VHf/UHF transceivers on frequencies in the 70-cm and 2 meter bands. Kenwood wants a change in Part 97 rules that would expand permission to operate an auxiliary station on all 2-meter frequencies above 144.5 Mhz, except on 145.8 to 146.0 MHz.

And while not mentioning Sky Command by name, Kenwood says that the proposed rule change would allow the development and use by amateurs of new technology devices and increase the utility of the limited amateur allocations. Current FCC rules limit auxiliary operation to certain frequencies above 222.15 MHz.

In July 2000, the FCC declared that use of the Sky Command did not comply with Amateur Service rules--specifically Section 97.201(b). It also declined to grant a waiver make it legal. The ARRL commented in opposition to Kenwood's earlier efforts to have the system eclared to be in compliance, and it refused to permit Sky Command advertisements to be published in its QST magazine.

In its Petition for Rule Making, Kenwood asserts that auxiliary operation is poorly defined and significantly overregulated in the FCC rules. Kenwood also argues that present limitations on auxiliary operation no longer are appropriate in today's amateur environment and should be withdrawn.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Again, the Commission has assigned the rulemaking number RM-10313 to the petition from Kenwood. Those interested may view and comment on it via the FCC's Electronic Comment Filing System. (ARRL)

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the New Orleans VHF Amateur Radio Club Net on the W5MCC 146.85 repeater serving my home town -- New Orleans, Louisiana.

(5 sec pause here)

**

TECHNOLOGY AND RADIO RULES: DIGITAL WIRELINE REMOTE BASE OPERATION BEING TRIED IN THE UK

A British ham radio operator has been granted permission to experiment with a digital wireline multi-band remote-base system. The experimental station was made possible by combining a popular H-F transceiver, the support of the national ham radio society and a cooperative government regulatory agency. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

Dave Gould, G3UEG, has received a Notice of Variation as a Special Research Permit to set up an HF station that is remotely controlled over the telephone network. This has come after 16 months effort liaising with the RSGB Licensing Advisory Committee and the Radiocommunications Agency and has been finally approved after a site inspection. The system is based on a Kachina 505DSP transceiver and Kachina's own specially-designed remote control system. The audio is digitised and then multiplexed with the control signals. The resulting single data stream is encoded and then passed over the telephone network using standard modems. At the remote end the data is decoded and the audio is split from the control signals and passed to the transceiver. The system will operate at a line speed of 28K or better and includes strong security, failsafe and shut-down measures.

Jeramy Boot, G4NJH
--

While we in North America take wireline and radio remote-base operations for granted its new to many other parts of the world. Anyone interested in receiving further information or with ideas to assist Dave Gould, G3UEG, may contact him by e-mail at david.gould@btinternet.com (RSGB)

**

ATTACK ON AMERICA: COMANDO SOLO DOES NOT WANT RECEPTION REPORTS NOW

If you are an SWL or ham who listens to shortwave -- and -- if you are planning to send a confirmation card to Radio Solo, the word right now is -- dont! This as the United States forces 193rd Special Operations Wing asks that reception reports and cassette tapes of its Commando Solo flying radio station broadcasts over Afghanistan not mailed to them at this time.

According to the Media Network e-newsletter there are two reasons. Obviously, they are involved in operations over a theater of war and need to lessen their peripheral workload. Also, due to the Anthrax scare in the United States, the U.S. mail system is overloaded with new safety procedures. In other words, your report may be indefinitely delayed or never opened. (Media Network E-Newsletter)

**

ATTACK ON AMERICA: NYC TELEVISION SEEKS NEW HOME

Seven weeks after a terrorist attack caused the collapse of the World Trade Center, hundreds of thousands of homes in the New York City area remain unable to receive more than four television stations. Because the main antennas atop the north tower came down, all the local stations, except Channels 2 and 41, which had backup antennas on the Empire State Building, had lost a significant part of their audiences. The situation improved last week when two more of the stations that lost their main transmitters began broadcasting from the Empire State Building site. Amateur Radio Newsline's Henry Feinberg has more:

--
On Thursday morninng, October 31st, Tribune-owned WPIX-TV channel 11 switched on a transmitter giving it an over-the-air signal said to be similar to what it was prior to the terrorist attacks. WNBC-TV channel 4 -- which in the late 1940's was the first to broadcast from the Empire site -- made a triumphant return later the same day when it flipped the switch on its new Empire located transmitter.

As an interim step to get back on the air, most local broadcasters had opted to use the old Armstrong Tower located in Alpine New Jersey. But the Alpine tower is not high enough and is to far away from the majority of the New York City demographic audience to provide clear reception throughout the metropolitan region.

The Empire State Building was the home to almost all New York City television broadcasters before the World Trade Center was built. Many broadcasters want to return to it but the New York Times says that Empire has to little space and not enough electrical power to accommodate the demands of all the stations. So a coalition of 11 broadcasters in and around New York are exploring options that include sharing management of a broadcast tower built to their specifications and needs.

The Times says that the long-term situation may be the construction of an enormous stand-alone broadcast tower. One that is perhaps 2,000 feet high and preferably be somewhere near the World Trade Center twin towers site.

But broadcasters will face a large number of issues if they persue the stand alone tower idea. Chief among them are the wants and desires of the residents of New York City. Many of them have made it clear that the area where the twin towers once stood be rebuilt a both a new trade center and also as a lasting monument to those who died in the terrorist attacks of September 11th, 2001.

Not far from the Armostrong Tower in Alpine New Jersey, I'm Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

Aside from the political issues mentioned in Henry's report there will be numerous other technical roadblocks. First is that of protecting the Philadelphia and Boston demographic television markets from interference. And if such a project is approved by the city at a different location, the Federal Aviation Administration will likely demand that it be built where it will avoid established flight patterns for local airports. And there are not very many of those in and around the metro New York City area. (ARNewsline(tm) from various published news reports.)

**

ATTACK ON AMERICA: VERTEX STANDARD / YAESU DONATES GEAR

According to a recent story in the ARRL Letter, Vertex Standard, which manufacturers Yaesu brand gear, has donated several pieces of equipment to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver and three of it's VX-5 hand-held's during the response to assist the Salvation Army at the Pentagon terrorist attack site. When the work concluded, Virginia Section Emergency Coordinator Tom Gregory, N4NW, e-mailed to thank the company and to inquire about returning the equipment. Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13th. (ARRL)

**

REPEATER COORDINATION NEWS: NFCB AND NFCC ELECTION RESULTS

The National Frequency Coordination Council -- or NFCC -- has elected Nels Harvey, WA9JOB as its new President. Harvey replaces Owen Wormser, K6LEW. Wormser had served as Chairman of the original drafting group that resulted in creation of the NFCC back in mid 1990's and as several terms as President.

Also elected to office are Dave Baughn, K4XI as NFCC Vice President, Dick Isely, W9GIG as Secretary and Clay Freinwald, K7CR as the organizations Treasurer. Meantime, Clay Freinwald, K7CR, and Nels Harvey, WA9JOB, have also been elected for two year terms on the National Frequency Coordinators' Board of Directors. Both ran unopposed. (ARNewsline(tm))

**

REPEATER COORDINATION NEWS: SERA DROPS UNKNOWN CATEGORY

The South Eastern Repeater Association says that it has dropped use of the term 'unknown' for listing repeaters that it has little or no information on. According to the organizations publication Repeater Journal, the listing of about 150 repeaters as 'unknown' was intended to prod their owners to file delinquent updates or help clear the groups records of repeaters that are no longer on the air.

It did neither, but it did cause confusion for ham radio enforcement efforts. This occurred earlier this year when FCC Special Counsel Riley Hollingsworth cited the South Eastern Repeater Association's Unknown Repeater List as grounds for dismissing a complaint against an uncoordinated West Virginia repeater that had been accused of interfering with a coordinated system in Kentucky. The coordination counsel's FCC Liaison is reportedly working with Hollingsworth's office to clear up the confusion. (SERA Repeater Journal)

**

HANDI-HAMS: WINTER RADIO CAMP IN MALIBU IN MARCH 2002

The next Handiham Radio Camp session will take place the first week of March, 2002, at Camp Joan Mier in Malibu, California. That camp will be offering classes in Technician, General, Extra, Operating Skills, and JAWS computing.

There is no tuition charge for West Coast or D-X members aside from the $45 registration and insurance fee. If you want to receive a camp application packet, please e-mail handiham@courage.org or call 1-866-426-3442 -- days -- Central Standard Time. The most current camp information is available on the Handiham website located in cyberspace at www.mtn.org/handiham. (Handihams)

**

INTERNATIONAL – BAHAMAS: FEES GOING UP

The annual fee for those holding a Bahamian Amateur Radio license has increased to $25. According to the ARRL news, The new fee applies for licenses renewed after August 1. The cost to "catch up" on past renewal fees prior to 2002 is $6 per year. Some US amateurs with Bahamian tickets were surprised to get letters requesting the back renewal fees and threatening fines and revocation. According to Dick Long, C6AKE, the Bahamian Public Utilities Commission--which handles licensing there--collects $6 a year for the years your license has been expired--this has always been its policy, he says. If you don't plan to use your license anytime soon, Long advises returning it to the P-U-C or sending a letter stating that you won't be using it again. "If, at some future time, you want to return to the Bahamas, you can always apply for a new license," he added. The P-U-C e-mail address is puc@batelnet.bs. (ARRL)

**

INTERNATIONAL - BELGIUM: A BLESSED EVENT

Hams in Belgium are getting to take part in a truly blessed event. This, as John Devoldere ON4UN who is the President of the Belgian national Amateur Radio society announces that nations radio amateurs can use the special prefix OQ instead of their usual ON or OT prefixes.

According to Devoldere, Belgian telecom authorities issued this special prefix on the occasion of the birth of Princess Elisabeth. The permission to use the OQ prefix began on October 26th, runs until December 31st. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: THE NATIONS HAM-STATS

The New Zealand Ministry of Economic Development reports that as of November 1st that nation has 3,295 General Class license holders, 1717 Limited license class, 24 Limited Novice and 25 Novice class operators. These hams share 205 voice repeaters, 19 television repeaters, 29 digipeters, and 42 beacon operations. Mix in two fixed licenses and the grand total is 5358 licenses issued. (NZART)

**

BREAK 2

From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website - www.arnewsline.org.

(5 sec pause here)

**
HAM RADIO IN SPACE: ISS TALKS TO NEW YORK CITY SCHOOL

Ten elementary school students from New York City had some very specific questions about current events for International Space Station Commander Frank Culbertson. To the question, "What did it look like in New York on September 11," Culbertson responded that he could see the smoke rising from the World Trade Center site and drifting south.

--
Culbertson: “On September 11th we happened to be coming over a few hours after the attack and I could see a large column of smoke coming out of the World Trade Center and floating off to the South and a kind of a fog of smoke all over the Southern part of the city.”
--

Culbertson went on to explain that he took pictures of the tragedy from space. He further related that he found out about the event while talking to his doctor during a scheduled medical conference.

Another youngster wanted to know, "What does Afghanistan look like from space?" Culbertson answered that it appeared to be very desolate and rugged.

The questions could be expected. The children are students at P.S. 234, with its regular campus only two blocks from the site of the World Trade Center.

On September 11, all 650 students at the school and their teachers evacuated their building without a single casualty. The school community has stayed together despite the turmoil, and is now housed in temporary quarters elsewhere in Manhattan. Culbertson told the students that he admired them for their courage, and told them to continue to study.

--
Culbertson: “ I want you to know that the whole world is very proud of you. Its to bad that you had to move from school to school, but we are very proud that you are continuing to work and take your education seriously. Things will be alright. Don’t worry.”
--

The students asked a total of twenty questions during the ten-minute contact. Some thirty teachers and parents and reporters were also on hand as were reporters from the New York Post and New York Daily News newspapers.

The ham radio contact was made through the Amateur Radio on the International Space Station project, an international coalition and was carried live by MSNBC on its website. Former NBC science editor and Newsline anchorman Roy Neal, K6DUE, moderated the event. Communication was handled through W6SRJ, a club station at Santa Rosa Community College in California, with Herb Sullivan at the controls.

P.S. 234 has its own website. Its in cyberspace at www.ps234.org/about.html (ARISS via K5YFL)

**

HAM RADIO IN SPACE: AMSAT-OSCAR 40 UPDATE

AMSAT's Peter Guezlow, DB2OS, reports magnetorquing of the OSCAR 40 ham radio satellite is again in progress. Guezlow also says that operational periods for the RUDAK system have been extended recently. This, to allow downloading of several important RUDAK G-P-S files.

AO-40 is currently in a long period during which the Earth eclipses the sun near the satellite's perigee. This actually began about August 28th, and will rapidly increase in length. The eclipses will continue well into June 2002. (AMSAT-NA)

**

SPACE AND SCIENCE: A LOT OF BIRDS UP THERE

SpaceDaily reports a new survey by the Teal Group has identified some 600 active satellites in Earth orbit or in deep space. The survey factored in all satellites launched since 1980, and, after a process of elimination, arrived at an estimate of 600 to 610 for satellites that remain active today. (AMSAT-NA)

**

DX

In D-X, you may recall that shortly after the September 11th terrorist attacks on New York City and the Pentagon, the government of Kuwait permitted its ham radio operators to the call sign 9K2USA. Now Bob Furzer, 9K2ZZ, reports a very positive response to the use of 9K2USA.

9K2USA was used by all Kuwaiti hams through September 30th as a token of the sympathy and support for the people of the United States from the citizens of Kuwait. It was also meant to be a statement of deep condolence.

Furzer now tells the Ohio Penn D-X Newsletter that the Kuwait Amateur Radio Society wants to thank all of those radio amateurs who e-mailed their support of the use of this special call. 9K2ZZ also says that the design of an official commemorative 9K2USA Q-S-L card has been finalized and is now posted on the website at www.k4cy.com. (OPDX)

From the U-K comes word of a new microwave D-X record. At least a new record for that nation. On Sunday October 21st the UK distance record for the 47 GHz band was raised from 163 to 203 kilometres. This happened when G7MRF and G0HNW, from Cambret Hill in grid I-O-74 had a two-way CW contact with G0IVA in gridsquare I-O-73 in North Wales. This distance comfortably exceeds the former record of 161 kilometres set in September 1999 by the same group. Reports of RST 519 and 419 were exchanged. (RSGB)

**

THAT FINAL ITEM: A MESSAGE TO REPEATER OWNERS FROM THE FCC

And finally this week, a word about repeater communications responsibility. It comes from the FCC's chief ham radio rules enforcer Riley Hollingsworth, and was included in a recent RAIN Enforcement Log Question and Answer session. If you own and operate a repeater, the next few minutes will be very important to you:

--

First of all, no licensee is required by the [FCC] rules to set up a repeater. When you do so, you do have certain responsibilities.

First, assuming that you have applied for and received coordination from your local repeater coordinating body -- if there is one -- and in a lot of areas there are not and in which case you would skip that step. As long as you are not interfering with a coordinated repeater, everything is all-right.

Once you start a repeater, you have to keep a few things in mind. First of all, if it is using your call sign -- it is your station -- and you are responsible for it. You do have a few alternatives as far as controlling it, but essentially it is your station and your responsibility.

The rule that states that you are not responsible for inadvertent transmissions I am afraid is often misunderstood. It only applies to inadvertent transmissions. [These are] transmissions that you let through on the repeater -- and I think it was designed for [modes like] packet anyway that you let through on the repeater before you realized what was happening.

Now, rules violations that occur by your users on a day-in and day-out basis or rule violations that go on for several hours are your responsibility as well as that of the users that are committing the violations. No dictionary in the world would define those types of situations as "inadvertent," and I am afraid that a lot of people just do not understand that.

If you put a repeater on [the air] you are responsible for its proper operation. Now, if you can't do that, or you do not have the time or the inclination [to properly control it], then your choice is to shut if off and to do something else. This is very important in these times because Amateurs are being listened to more than ever before.

Everyone seems to be buying scanners and short-wave radios. Very often a repeater is new person's first exposure to Amateur Radio -- and a potential recruit -- I might add. And, very often, it is the news media's first exposure to Amateur Radio.

If your repeater is an embarrassment to Amateur Radio, then you should shut it down and seriously examine your motives for wanting a repeater. You will be held responsible for regularly occurring rules violations, as well as the people committing the violations.

I would hope that more and more Amateurs would understand this. I think that the rule that you are not responsible for inadvertent transmissions has been misinterpreted by a number of people.

--

What Hollingsworth really seems to be saying is that your repeater is kind of like your house and your surrounding property. Yes, you have responsibility to make your home secure for you and your family. You also have a responsibility to keep it and its surroundings neat and clean so that your neighbors will also enjoy the view. (FCC, RAIN)

The software that comes with the unit is probably better than the freeware softwaer. That's the problem with the Icom IC8500, the software alternatives are poor.

Hello all,

I have a Sony ICF-SW77 for sale.
Only selling it because it has not been in use for some time. It is in excellent if not new condition except the buyer will want to replace the antenna. The antenna became damaged a while ago and the tip is missing and there is a bend in the lower sectiion which prevents the antenna from withdrawing into the body of the radio. Antenna still extends fine and is quite usable. I just never found the need to replace it.

If anyone is interested, I will email photos.

$260 includes shipping anywhere in USA.

Mark

Can anybody tell me of a decent scanner that has the ability to be programmed via a computer? I am tired of programing my scanner by hand. (It only hold 60 channels). I would like the least expensive models.. Something around 200 to 250$ (USD) if possible,

Thanks!

I have the www.AntennaWarehouse.com Scanner Beam which is the exact same antenna
as the Grove Scanner Beam. Actually built by the same company. The only
difference is that AntennaWarehouse charges $20.00 less than Grove for the very
same product.

I've had mine for a couple months and love it. I can hear things I couldn't
pick up before. My main listening is MilAir bands.

I had my AntennaWarehouse beam 2 days after ordering it and customer service was
very good which is more than I can say for my last Grove experiences.

>

Hello,

I did not claim the usenet for me, so what will you say with that
argument?
I dont tell somebody to post any stuff to any newsgroup.
So what?

I know how to use filters, but I know even the charta of different
newsgroups and I know that a majority of users has accepted them.
And in most of them spam like announcing ebay-auctions is on the "non
wanted" list.

If a majority has made rules, everybody should keep these rules until
they have changed. That is the democratic way.
To change the rules you can start a cfv if you want. But I dont think
that you will succeed.

You are telling people not to post because you don't have the brains
or are too lazy to filter or ignore them.

That's what.

> I know how to use filters, but I know even the charta of different
> newsgroups and I know that a majority of users has accepted them.

Show me a charter that bans Ebay.

> And in most of them spam like announcing ebay-auctions is on the "non
> wanted" list.

Your talk is cheap, post some facts, links actual proof.

> If a majority has made rules, everybody should keep these rules until
> they have changed. That is the democratic way.

Yes, you say lots but have yet to post a single bit of proof.

> To change the rules you can start a cfv if you want. But I dont think
> that you will succeed.
>

Okay Wolfgang, show me in the rec.radio.scanner charter where it
states that Ebay ads are banned?

You can't.

So much for your weak argument.

Quite whinning, you lose your job as net cop now go use your filter.

Don't trust GerogeF, he is a shill for AntennaWarehouse. He already stated he hates Grove but again refuses to back his claim with facts and or details.

AntennaWarehouse claims their scanner beam has performed better than similar priced beam and those costing many times more. They also claim they spent a summer running test. Ask them for the names of the antennas they compared them to and they won't answer. GeorgeF claims they told him but he can't post the names because he received them in E-mail. I know, it makes no sense unless GeorgeF is a liar and can't produce the names.

AntennaWarehouse also lies on their site about having a discone with 7db gain. Anyone that has a clue knows this is impossible. A blatant

attempt to fool the unaware and take money with false claims. If you don't know, a discone has zero gain.

BTW, It is interesting to note Grove sells many similar items that AntennaWarehouse sells. You will also note Grove doesn't make the outlandish false claims as does AntennaWarehouse on these same items. Says a lot. Grove is honest about their product, AntennaWarehouse is not.

Don't trust GeorgeF or AntennaWarehouse. They both have a problem backing their talk up with facts.

## 2145. railroad freqs?

# 2146. Pro 94 - Problem selecting PreSet Fleetmaps - Help!

Newsgroup: rec.radio.scanner
Date: 2001-11-13 19:05:21 UTC
From: ericDONOTSPAMMEthered@eudoramail.com
Message-ID: <bir2vt0p97q7vulcgvfll4llskd4i9iaea@4ax.com>
Source record: 57094

I have a brand new Pro 94 and am trying to enter freqs for a Motorola Type 1 trunking system. I have the fleet map number from the frequency manual that comes with the scanner.

The instructions for entering these freqs are:

1) Set the scanner for conventional scanning mode
--> OK, this works

2) Press a number key to select a bank to store the freqs
--> OK, this works

3) Repeatedly press UP or DOWN to select E1. A previously programmed frequency appears
--> OK, this works

4) Press DATA(ALT).
--> OK, now what?

5) Repeatedly press UP or DOWN to select the desired map (example E1P7). The preprogrammed fleet map appears

******* THIS DOES NOT HAPPEN ***************
At this point, pressing UP or DOWN just moves me through the channels in the bank. No fleet maps appear.

I just took the radio in to RS and compared it to one on the shelf, theirs behaves exactly the same way as mine... it didn't work. RS manager made a bunch of calls, no one knew what to do.

Need help!!!

I beg to differ. Uniden has probably made more of them in that time
period. Look at the back of the radio.... If it's made in Japan or
China then it's made by GRE; if it's made in the Philippines then
it's made by Uniden.

Before you spend the money on the Grove Scanner beam, go to their website and look at the picture. Then go to the Antennawarehouse.com website and look at their picture. Doesn't matter who claims what, from the pictures you can see very clearly its the very same antenna. Pictures don't lie, even when Glenn tries to cloud an issue. Again, why pay $20.00 more for Groves when the pictures tell the story, its the same antenna.

You can also see a picture of my Scanner Beam installed at
http://home.flash.net/~av8tor/radios/shack.htm

If you don't want to spend $250.00 for a KLM or over $300 for a Create then the Scanner Beam is about the best you can get for $54.00

The ICOM R2 may be a good choice - around $155. I have one and like it a lot. Not a trunk tracker, but a good scanning communications receiver with a wide range.

These freqs were very active during the Sept. 11th disaster (and still are quite active). I'm about 65 miles NW of NYC and it comes in nice and clear (have good elevation). 470.7125 seems particularly active.

Buy a short 3-4 foot boom TV antenna, turn it on it's side, drill new
holes for the clamp and you have the same thing. I've had both a Grove Scanner
Beam and several versions of this latter setup in the same place & they are
essentially identical in performance. I live where the ice will get whatever
you put up in a few years anyway, so the cheaper method makes sense.
For high/low band only, a folded dipole turnstyle FM antenna (like Radio
Shack sells for $14.95) turned 90 degrees works very well too.

> clearly its the very same antenna.

Why then does AntennaWarehouse claim it was special built just for
them?

> Pictures don't lie, even when Glenn tries to
> cloud an issue.

Cloud the issues? You mean your constant shill for AntennaWarehouse
including telling lies for them?

> Again, why pay $20.00 more for Groves

Grove doesn't misrepresent what he sells like AntennaWarehouse.
Grove doesn't make false claims like AntennaWarehouse.
Grove is honest AntennaWarehouse IS NOT.

> when the pictures tell the
> story, its the same antenna.

Not according to AntennaWarehouse. Who is the liar? George or
AntennaWarehouse?

> You can also see a picture of my Scanner Beam installed at
> http://home.flash.net/~av8tor/radios/shack.htm

Wow! That proves a lot!

> If you don't want to spend $250.00 for a KLM or over $300 for a Create then the
> Scanner Beam is about the best you can get for $54.00

But George, what about the antennas of equal value tested against the AntennaWarehouse antenna? Why didn't you mention them George? Why no mention after you claim you know the names of these mystery antenna used for comparison? Is it because you are a shill for AntennaWarehouse? Is it because you lied for AntennaWarehouse? You have been asked to post these facts George many many times. Why do you continue to lie for Tim and AntennaWarehouse?

Why do you keep shilling for a company the preys on unknowing novices in the hobby with inflated and false claims? Why is that George?

> Okay Wolfgang, show me in the rec.radio.scanner charter where it
> states that Ebay ads are banned?

I doubt that you have any knowledge about the usenet at all - the fact
that you are unable to create readable quotings in your postings supports
that opionion.

If you actually WOULD know what you are talking about you should know
that a charter does NOT describe whats banned in a particular newsgroup
as this would be a very long list. A charter tells you what is ALLOWED
in a newsgroup.

The charter of rec.radio.scanner clearly states that this newsgroup is
for _discussions_ about utility traffic. It is not a group for having
mindless trolls advertise their crap which is auctioned off at ebay.

There is no justification for such posts in the charter and all the
big usenet hierarchies have created special groups for selling and
buying things. This was not done without an intention. Discussions
groups are just for that - discussions. I'm sure that interested buyers
in this group are able to follow the specific newsgroups for selling
or just to have a look on ebay every now and then.

The fact that of course some readers of this group might actually be
interested in such sellings does NOT excuse abusing discussion groups
for cheap advertisements. If everyone auctioning stuff at ebay would
post his announcements here, this group whould be literally unreadable.
But there can't be exceptions - either everyone is allowed to post -
or no one. I vote for the latter.

And of course there is NO EXCEPTION for cross posting these cheap
advertisements to a german and a dutch newsgroup. There are reasons
why some newsgroups are not in english.

> Quite whinning, you lose your job as net cop now go use your filter.

Calling others a 'net cop' is usually one of the last resorts of
trolls like you who are running out of arguments. This is a cheap try
to put a bad light on someone. In fact is has nothing to do with a
'net cop' mentality if plain users of the usenet are opposing abusal!

Stop trolling.

Yep, and if you can't find it local they are easily found on the net.

BTW Neutrodyne, have you tried mounting your beam on a non-conductive
mast?

> For high/low band only, a folded dipole turnstyle FM antenna (like Radio
> Shack sells for $14.95) turned 90 degrees works very well too.

This is that four armed thing with the folded arms, an omni FM
antenna in an X shape, right? Are you saying mount it with 2 arms up
and two ending up vertical or like the Cingular logo? You are trying
to get it vertical, right? What are it's directional characteristics?

thanks roger
all the specs looked good on the yupiteru and I discussed it with a few
dealers and on the news groups , I even looked at ebay. Eventually I opted
for a Yaesu 500 , from a dealer at www.hamradio.co.uk
Its second hand but comes with warranty so I'm pleased with a price of £125
which I think is about $180 it should be arriving tomorrow.

Cheers

Aidan

# 2169. R11 test reciever fault. ./.

Newsgroup: rec.radio.scanner
Date: 2001-11-13 23:43:24 UTC
From: Eve Odds <steve@dodds24.fsnet.co.uk>
Message-ID: <9sujph$5jo$10@newsg4.svr.pol.co.uk>
Source record: 57017

Hi all.

My r11 test reciever has just gone wrong after 3 years
of service.
Basically up until the other day the unit could be
used up to 3 hours per charge, all of a sudden the thing wont even switch on
.... the leds scan across,
stop on the 800 mhz light, that flashes 5 times, then it all goes off!!!!
I dont think its a battery fault, as it has gone down
overnight.
Has anybody else come across problems with the r11
reciever.
Are they prone to charging regulator faults.
Is it likely to be unviable to repair???

Fingers crossed!!

--

Pop up windows???
On screen ads???
The cure is naviscope.

Search a dozen engines at a time???
The method is copernic.

I surf efficiently.

Steve.

# 2171. Re: Pro 94 - Problem selecting PreSet Fleetmaps - Help! - SOLVED

Newsgroup: rec.radio.scanner
Date: 2001-11-13 23:49:44 UTC
From: ericDONOTSPAMMEthered@eudoramail.com
Message-ID: <bcc3vt0v46qbefbkp3ddhjcm3gq10vsuh2@4ax.com>
Source record: 56970

There are a couple things that are not mentioned in the instruction
manual.

See below:

On Tue, 13 Nov 2001 08:26:38 -0600,
ericDONOTSPAMMEthered@eudoramail.com wrote:

>2) Press a number key to select a bank to store the freqs
>--> OK
>
>3) Repeatedly press UP or DOWN to select E1. A previously programmed
>frequency appears
>--> OK
>

3A) Press Prog then Press Trunk

3B) Key in ALL of the frequencies that you will be scanning as you
normally would, hitting Enter after each and Prog to advance to the
next channel

3C)REPEAT STEPS 1-3 (skipping 3A and 3B)

>4) Press DATA(ALT).
>--> OK
>
>5) Repeatedly press UP or DOWN to select the desired map (example
>E1P7). The preprogrammed fleet map appears

At this point the fleet map options appear.

See my post on this. For Motorola Type II,

1. simply hit Prog then Trunk.
2. select the bank you want.
3. enter the freqs just like non-trunking.
Hit E to enter the freq
Hit Prog to advance to the next channel
4. Repeat 3 until all freqs are entered.
5. When you finish hit SCAN and SRC.

THEY DON'T TELL YOU THAT, ABOUT SCAN *AND* SRC. You do that and you
are trunking!

Well, just got my Pro-2006. Looking to monitor some Military air. Currently I'm just doing a limit search between 225mhz and 418.5mhz. But not getting any results. What mode should I be in? FM, AM, WFM? How about what step? 5,50, 12.5?
Should I narrow the search band at all?
Gene

I am a bit off topic but there is no repeater or GMRS newsgroup. I am gettting a GMRS radio and have been reading about repeaters. I keep reading about getting permission to use repeaters, etc. how does one go about that and secondly, how do "they" know who you are? Also, why would my signal simply not get picked up by repeater and passed on, regardless of who I am?

thanks

Message-ID: <SSII7.169401$3d2.6906854@bgtnsc06-news.ops.worldnet.att.net>
Source record: 56985

Well you all gave me much to think about.
I am mostly interested in low band (33MHz) so either a TV antenna (channel 2 starts at 54Mhz) or FM (88MHz) would be too short. And I really would not judge two antennas by looking at the pictures of them, so that comparison is out. I am looking for a reception path of 60 miles, and the Grove seems to be the best for the bucks, but this Wingard is out of production but available for about 50 bucks, coax included (they make TV antenna's primarily); so that is the question.
tnx for all the input.

Richard

Ditto here. It improves the marginal reception of the StL City
trunked system on my PRO-92 from out here in the county. I use an old
"large" TNC cell phone antenna with an RS TNC to BNC adapter.

GMRS repeaters, like all repeaters, are owned by someone, and that person has the right to determine who uses his/her machine.

Some are commercial setups, with use privileges rented to users or groups, others are owned by GMRS groups who require a membership for their use, except in case of life-threatening emergency, motorist aid, or similar situation.

Remember, someone had to buy the repeater, install it, maintain it.... you see how it goes.

Remember also that you need a FCC license for that radio.... the forms should be in the box with the radio... one license and fee will cover you and all members of your immediate family, from your parents to your children. You can speak to each other on simplex(direct) frequencies in the GMRS range, but you will have to pay your dues to use a repeater.

I am sure you will be forgiven one (!) repeater transmission to ask where you can get info about membership, but that's about it.

Hope this helps.

138-144MHz + 148-151MHz + 225.0-399.975MHz AM, 25kHz steps.

If you really want to be thorough, also check 30-87.975MHz FM, 25kHz
steps, but you'll be wading through a lot of non-military stuff there.

That's not a normal aviation frequency. Aviation radios go up to 137
MHz. 137 MHz is a weather satellite band...

Yes, nearly all MilAir comms are in AM, espiecally in teh 225MHz to 400MHz area. Next when doing a search I like to use 50KHz spacing unless you have several scanners. If you have several scanners I'll set them up on 12.5KHz spacing and each scanner would cover a small freq range. Example, scanner 1 would search 225 to 275, canner 2 search 275 to 350 and scanner 3 searchs 350 - 400. You can cover more frequencies faster and catch more comms that way.

What area of the country do you live in? We might be able to help you with frequencies we already have.

It's only 0745 and I have some loggings to share, looking for some info...

At 0530, heard a town over 50 miles away dispatching fire on my town's DPW freq, that's never happened before.

Now I am hearing what sounds like Polish or Russian stations on 33.025 and 33.15. Both are different stations, it's not the same people on either.

Any idea what those 33MHz freqs are?

Thanks!

A quick rule of thumb: if it has "one button" WX reception, it's made by Uniden. If it doesn't, it's made by GRE. Not sure if this still holds true, but it used to be valid several years ago.

Radio Shack has a discone antenna also you might check out. I have one and it works well, only complaint is that the ground plain elements are a thin gauge and will break or warp fairly easily if you're not careful. They all maybe this way, I haven't seen the Grove or other discones. If you go for any of the discones, be sure to buy the center whip that screws on top that will give you coverage for the higher HF freqs.

Radio Shack does carry replacement parts for all of the antenna, and I had very fast good service in ordering and shipping to me.

If the trunked network is not digital you can monitor it with a Trunk Tracker scanner such as the BC 780XLT. You should find out what kind of trunking network they are switching to.

Like Motorola for instance.

"When I die, I want to die like my Grandfather peacefully in my sleep. Not kicking and screaming like his passengers."

I try this - but all of these 800 and 900 mhz freqs have nothing on them but carriers and strange digital sounds.
Is this normal? If I have the proper trunking system type entered does it decode this? Or are these just signals I can't decode? What happends if you don't have the proper system selected? is one of the channels still listenable? I just hear strange patterns of noise, much like engine sounds or strange pulses.

For 800mhz yes it will be better than the stock telescoping whip
that probably came with the unit. For freqs. far away from 800 mhz no it
probably wont be better.

Jeff

i found some juicy cordless phone conversations from my neighbor a few weeks ago on 48.860. It was clear as a bell on both sides, like they were in my house with me. Now, on the same freq I can only hear the neighbor and it's full of static and fades badly..the other side is missing completely. And the only way to catch it at all is to hold the antenna. What has happened here? I'm using a bearcat 895...no changes that I know of with my house set up or antenna and can't find the traffic anywhere else between 46.0 and 49.5...

the obvious answer, if you made no changes, is that the neighbor moved his phone base, or is using the handset in a different part of the house... either of these would affect your reception. Or maybe his phone is just not working properly.

I am in the market for a scanner and I am leaning towards the Icom R-10. I am also considering the Alinco DJX 2T.

Did you consider these models over the Yaesu 500?

They don't make it easy with so many choices .... but this is the fun part.

Any and all comments will be helpful.

>Any suggestions to replace the rubber ducky?

For better reception on the low freq's I have had pretty good luck with the center loaded telescoping antenna that Radio Shack sells. I have used it with the Pro-2004, Pro-2006, Pro-34, Pro-91 and Pro-94's. Really improves the 46 Mhz reception but still works well at 800 Mhz.

Double check my postings on this. Yes, you must know the trunking
type. You need to enter ALL of the frequencies. You need to hit SCAN
then SRC otherwise you will get the problem you describe below.

## 2258. Meteor shower this weekend should make interesting DX

Newsgroup: rec.radio.scanner
Date: 2001-11-15 05:52:40 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3BF35828.E866AF57@ix.netcom.com>
Source record: 56907

Early birds may catch more than their proverbial worms this week. In the predawn hours of Sunday, Nov.18, the annual Leonid meteor shower may put on one of its best shows in decades, according to various scientists modeling the expected Leonid activity this year.

VHF and UHF signals will bounce off of ionized meteor trails, and there should be lots Sunday morning. Could make some interesting DX possibilities.

There is also "FREE" information on the net, just like any other frequency
you are looking for.

Why pay when it's "FREE".

May I suggest checking out the 15" or so flexible rubber antenna. I use one and it work very good. They originally made for low band (30-50 MHz) hand held transmitters.

They are available at a variety of scanner dealers.

# 2261. FREE Uniden TrunkTracker (BC895XLT) Software

Newsgroup: rec.radio.scanner
Date: 2001-11-15 11:36:58 UTC
From: miscnews@michnews_DOT_net
Message-ID: <3bf3a752.78090771@news1.rdc1.mi.home.com>
Source record: 56912
Cross-posted to: rec.radio.scanner,alt.radio.scanner,mi.misc

The first public beta of EZ-Prog 895 is ready!

http://www.michnews.net/scanner/software.asp

EZ-Prog 895 allows you to easily backup, program, and control your
Uniden BC895XLT scanner from any Windows 9x / ME computer (untested on
NT/2000/XP), through the RS-232 (serial) port interface (cable
required).

Features include

- Copy / Paste Programming
Allows you to copy and paste frequencies from
practically any web page, text file, spreadsheet,
or database grid.

- Scanner Backup / Restore
Protect your programming, set up multiple
profiles, and clone your BC895XLT

- Remote Keyboard / Control
Use your computer's keyboard or mouse to control
basic functions

Features under development include

- Fleet Map Selector / Programmer
Makes it easier to specify Type I fleetmaps

- ID Scanlist Editor
Browse and edit Talkgroups for Trunk Scan mode

- "Big Screen" Display
Numeric and Alpha tags you can see from across
the room

- Hit List
Display Search and Scan hits

- BC245XLT / BC780XLT / PRO-2052 Support
Enhanced support for TrunkTracker II/III features

- Selective VOX
Record specific channels / freqs / talkgroups to
a soundfile while monitoring even more

- Enhanced Frequency Finder
Searches for center frequency and tracks relative

activity for a given range of frequencies.

# 2262. REQ: Info or Tips on the Icom R10

They changed that. Four or five years ago at least. It went to the
Supreme Court.

I wondered about that. Last I heard was it was illegal to listen to cellular calls, but you could listen to cordless calls. You were not allowed to divulge what you heard, or discuss it with anyone who was not involved in the conversation or listening in with you. You could also not make a profit off what you heard.

Is that still the case, or has it changed again?

Which doesn't necessarily translate to an availability of cellular-capable radios. Radio Shack in particular sells the same version in the U.S. and Canada. Blocked, in other words. If you live in the Great White North...like, you're out of luck, eh?

I believe Uniden does the same (?)

Hello

I've had the R10 for about 4 months now and I think its a pretty cool scanner. The battery time leave a bit to be desired in my opinion, but I use standard AA's, not the rechargeable ones provided by ICOM, Ive been too lazy to charge them up. I like the Auto Memory Write Scan function, where you can store a range of frequencies i.e.: 476.000-477.000 or any range you desire. You have I think 10 sets of the AMWS, Auto Memory Write Scan banks so you can stick the scanner in a coat pocket and scan covertly just a little trick for you when there are hits between the range you specify those hits are stored in bank Q. The R10 has 1000 memory banks broken down into 50 memory's of A,B,C,D,E,F,G,H,I,J,K,L,N,O,P, Q (AMWS 100 memory's), R (SKIP 100 memory's) which is more than enough for the normal scanner nut. It also has programmable "Easy" banks its kind of like AMWS but it doesn't store frequency's when there is a hit You can visit and join http://groups.yahoo.com/group/Icom_R-10 to find out more info on the R10. The overall feeling for the R10 is that its a great scanner and it does a lot, I'm very happy with it. Here's one more link I wanted to include its a "professional" review of the R10 http://strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=recv&num=002 .

Good Luck

John

Hey guys.....
I just joined this list last week. I was hoping to get some good info on scanners. You guys need to take all this bickering and name calling off list.Meet each other at the local Dairy Queen and duke it out or something. You are wasting a lot of bandwidth that could be used for something constructive. I don't know any of you guys and the problems you have with each other but please ...let it go.....Please don't keep badgering each other on this list.As I'm new to this group I realize you will resent my butting in on this but from what I've seen so far this isn't a moderated list.Sorry for the off topic subject but I would like to learn from some of the people on the group who have a lot of knowledge to spare.Please forgive me if I have stepped on toes but some of you guys need to chill....Let the flames begin....sluggo

# 2285. FA RS Pro 2004 Scanner Relist

I read in strong signal forums that RADIO SHACK is going to have a
sale on Pro 93 this december, the week after xmas.

I guess I will wait and pick it up at that time. It was hinted the
price be 199 or below during this sales (last week of dec)

I went to radioshack website but dont even see pro93 scanner list
there !

what is going on ?

I do see pro 92 n 94 there

How come when pro93 is newer, it goes backward in the number ?
from 94 to 93, someoen clue me in lol

# 2294. Info or comments on the Yaesu VR-500 vs Icom R10 for a newbie!

Newsgroup: rec.radio.scanner

Has anyone here had experience with the VR500 vs the R10? I have read the reviews and wanted a little more info on these two nice recievers.

Or does anyone have any recommendations on a wideband reciever that has SSB support, I would like to keep the price between 200$ - 300$ (USD) Also I want it in a portable or handheld type.

THANKS!

Hello all I am new to the monitoring hobby... And I have a few questions regarding radio companies specs?

1 How does on read the sensitivity and/or selectivity are the higher or lower values better?

2 I have been trolling this group for awhile now and I see people asking how to mod the reciever to get the cellular band.... Why would one want a reciever that is not cell blocked? Are we/you missing something in this range beside cell calls?
(I guess don't really see the point in monitoring a cell call, "Hi Honey I am on my way home now!" this just doesn't really excite me like hearing the police or whatever calling in something a like a chase or something to that effect.. Am I missing the point or what?)

3 What is triple superheterodyne? Is it a standard feature or what? I tried to look it up oin ask.com and google but came up dry.

Well me thinks that is about it for now..... THANKS!!

<NONOSPAMjmackey@parg.org> wrote:

>Well said, VERY well said!

Sorry Folks, this is the beginning of mackey's
never ending story. I consider the above statement
"Well said, VERY well said! as Chapter One of many.

For the next year or so ,this piece of shit mackey
will launch a barrage of simple statements, forged
posts, make believe enemies and fantasy friends.
a few of us pop in every 3 or 4 months to see
which chapter of his miserable life he's rewriting.
This sorry chap is fucked in the head.

If you're the kind of person who likes to read the last
chapter of a book first ... search back a couple of months.
If you want to read it all in a night ... just search for "mackey
posts" in a 12 to 14 month time period and print that out.

you see folks, this loser just wastes bandwidth. kill file him
now. i purposely fanned the flame ... it makes him happy. so now
i'll piss on it.
mackey, eat shit and die!

outta here,
monty

Source record: 56854

Speaking of phone calls, I often hear someones phone on ~3030 KHz in FM mode. I found them one night while listening to the military stuff on 3039 KHz and heard some severe splatter being caused from these phones. The phone seems to be something close to my residence. I heard them mention some street names that are around here, and its not military since I heard general chatter and even profanity. I don't listen to phone calls, unless I accidently stumble on them (e.g phone patches on HF, or when they appear on the 3 MHz band) but what pisses me off is it causes lots of interference thats about 20 KHz wide. My question is...Since when did phones start appearing on 3 megs? An image perhaps? This was on an Icom R75.

Version 0.9.2 notes: I have made a minor revision that includes the correct readme.txt file as well as an upgrade to the Start Scan control which defaults to the existing banks.

The next major revision will be adding more debug information, real-time status display, and a visual keyboard.

Bad things about R10:
There is no possibility to delete a single frequency out of a single bank.
There in no possibility to link different memory banks for scanning.

Message-ID: <3BF4FB34.DF49DEC9@mitre.org>
Source record: 56858

Get Four (4) NiMH rechargeable AA's and the PRO-91 will go ten (10) to
fourteen (14) hours on a twenty four (24) hour charge inside the radio.
Using the stock power supply. If your going to need the PRO-91 in a
shorter timeframe, consider a NiMH out board quick charger.
OR if your only running the PRO-91 for seven (7) or eight (8) hours
on the NiMH AAs then JUST give the a sixteen (16) hour charge.
NiCADS will only run six (6) or seven (7) hours and recharge in sixteen
(16) hours inside the radio It will also work with alkaline.
If your question is "why 4 AAs" the components work on between 4.7 Volts
and 6 Volts and draw milliamps of power and will run for hours on them.
I have a PRO-90 and us a LEE ELECTRONICS battery pack. If you have not
purchase the radio yet. The PRO-94A pr PRO-92A/b would be much more
radio however if you only want ot listen to ONE Motorola 800 Mhz
analogue
trunking system at a time, that's all I'm doing, Then the PRO-91 will
do fine. One great feature of the PRO-92 is TONE SQUELCH.

I know scanners; I know this one doesn't cover 25-1300 MHz. There's a
gap at 600 to 800 MHz. Good scanner though (I own one).

The bickering has been going on for as long as I have been using
this newsgroup. I have also found that it is not confined to just
this group. The best solution is to ignore it or use a filter. Filters
when used properly can even make this group tolerable.

Hi Jim

I have had both so I'll give you my opinions. The VR-500 is a pretty cool looking radio, it has tons of features its pretty durable, the receive end I think leaves a little to be desired in the upper frequencies 800 MHz on up, I'm not sure if that's because I live in intermod hell or not or the antenna I used which was the stock antenna.. The battery life on the VR-500 is awesome, the bandscope feature is pretty cool also if you're into that type of thing like I am. The Scan speeds on the VR-500 is great too. Overall using the VR-500 for the type of scanning I do, Id give it a 7 out of a scale of 1-10. The R10 is a nice radio and is my first ICOM product, the R10 is about the size of one and a half VR-500s on top of each other, I find overall the R10 is a good general coverage scanner, it covers all the frequencies pretty good out the box, some say the scan speed on the R10 is a bit too slow for them but I like it. Some of the features I like on the R10 are the AMWS which lets you program a range of frequencies, then you can scan that range when you get a hit in the frequency range it stores it in a special bank, you have ten of these to play with. The Easy bank feature is cool also, its like the AMWS but it doesn't store frequencies that get hits, you have ten of those also to program. You have 1000 memory's to use broken down into ABCDEFGHIJKLMNOPQR 100 memories for banks Q & R. Bank Q is for the AMWS search function and bank R is for frequency lock outs, i.e. Paging Channels, Data Comms, etc. On a scale of 1-10 id give the R10 a 9, the reason I wouldn't give it a 10 is because of the battery life using standard AA's other wise its a great radio. If you have any othe questions please post them and Ill let you if I can help.

Good Luck

John

I have a Uniden Sportcat 200 now. Does a pretty good job for a new person. It does not give me access to some of the freq's that I want though. I am not able to get 72-76mHz among others.
What would be a good all around scanner, that would give me access to the most freq's?

Thanks

Actually, even the older RS Pro-60 (handheld) and 2006 (tabletop) offer
continuous coverage that could tune that freq. range.

Who r u ?
I'm from israel and all that u r saying make us sound like the bad guys
because we are big and they r small.

I'm from Israel and i'm telling u.... WE CAN'T LIVE HERE!!!!!
I can't go out to the street without being afraid of a bomb or shooting!
terrorism is everywhere!
dont u think we want peace ?
you think we love this? Who would choose this?????????????
if some1 would promise that giving back teretories will help, we would give
it up!
but arafat already signed a lot of agriments with us and lied.
You can see that if we back off a little from guarding their cities they
send arabs to explode and kill us!
What would you do ??????
what?????????

All we want is to live.....
to go out from our home and know that we'll come back...
to go skydiving on weekends...

Blue Skies

Are you saying it will receive 600 to 750 MHz? I don't think so.

I don't doubt that it receives 800 t0 900 MHz.

# 2334. ? about ground plane antenna radials

Newsgroup: rec.radio.scanner
Date: 2001-11-16 20:58:32 UTC
From: tremors834@aol.com
Message-ID: <20011116155832.22540.00000543@mb-cg.aol.com>
Source record: 56885

I'm trying to construct a portable "base" wideband scanner antenna. Here's my idea-
I have an antenna whip from a Radio Shack 20-032 Magnetic mount Mobile scanner antenna. It's supposed to cover between 25 and 1300 mHz. The whip has two loading coils.
The whip is a total of 32-3/4 inches long.
I'll install/solder the whip into a so-239 flange chassis mount.
I'll then solder or screw 4 radials on to the so-239. The radials will be 90 degrees to each other and angled 45 degrees downward.
Then this will be all mounted onto some sort of PVC pipe telescoping portable mast.
My questions are:
1-Do you think I would have some good results or even work?
2-Being I would like to keep this as a wideband antenna, how long should each of the radials be?
3-What approx. thickness of rod should I use for the radials?
Any and all input or constructive critisism welcomed.
Thanks, Gene

Ground planes are frequency specific. If you build one for the lowest freq.
(l=234/freq) it should do a good enough job on the higher freqs. Of course
a discone is a great wideband antenna but they are difficult to homebrew.

From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3BF58723.3010505@licensed4fun.com>
Source record: 56888

I've written software for the RadioShack PRO2052 and now I want to write some software for the BC780XLT. However I can't find the commands that need to be sent to the RS232 port to tell the scanner to do certain functions. RadioShack included the command with their scanners but Uniden didn't. Where can I find them.

Funny how times change. I remember a time where if you had electronic equipment but no batteries you were screwed. The batteries were required because you were invariably asked to switch the equipment on to prove that it was what it said on the tin.

The one time I took a Yupi 7100 on board a Virgin flight, I had no problem. I asked the captain if I can listen in and he looked at the radio and asked me if it could transmit. He was happy as long as the radio was not capable of transmitting, but asked me not to use it during takeoff and landing.

It was funny because as the crew were going through the cabin to ask passengers to switch electronic equipment off, they said to me "could you switch -- ah, it's ok because you have permission from the captain". The guy next to me was shitting himself and even told me later "if we crash, it'll be your fault!"

I found that once in the air, I could not hear the ground, only our own plane. And at some point I missed the captain repeating the frequency he was changing to and after that I couldn't find it again.

I did hear a commercial radio station over Salzburg though. Anyway, near the destination I could hear the BA flight that was following 15 minutes behind us very loud and clear, but still no ground.

In this day and age, I wouldn't use a scanner at an airport. In fact, I wouldn't do that even back then (call me paranoid). I have seen plane-watchers (complete with pen, paper, scanner and binoculars) in the observation terrace at Gatwick though. What a sad thing to do at 7 in the morning on a Saturday!

Source record: 56891

Hello!
I am thinking about buying a new scanner. The scanner I have now was handed down to me by my dad...an old 16 channel Bearcat.
What is the best "new" scanner on the market? And most importantly...how does computer software enhance the use of the scanners these days? ( If Dad only could of seen this coming!) Is it easy to intergrate everything?

Thank You for all your replys!

# 2341. MilAirComms.Com -- New Military Frequency Website HF/VHF/UHF

Many of you have been visitors of the RadiosOnLine website
(www.flash.net/~av8tor/radios). I have created a new site that is
dicated to MilAir listening. Besides MilAir there are really
frequncies for
for all branches of Military Listening including HF Utility Stations,
VHF, and UHF MilAir.

The site is new, with current and new frequencies that are really in
use, not just another site with frequencies from 5+ year old sources.

Please check it out often as I'll be adding more dailiy to this site. I
have 1000's of current freqs which will soon be added.

> lower values better?

For sensitivity a lower number is better. Selectivity is a bit more
complicated. But I doubt you'll find much difference in the published specs
of various scanners since the Marketing Departments make up them up anyway.

Don't say troll! Well some people think it's cool to monitor cell calls. It
became more exciting when it became illegal. Most cell call are now digital
so you can't decipher them anyway.

It's really "triple conversion superhet". This is a good thing! It usually
means the first IF freq is up around 600 MHz (called upconversion). This
helps eliminate images (phanton signals that can show up at frequencies
where they really aren't).

Those are likely NOT loading coils, but phasing coils. The idea is make the antenna act as a collinear array on some freqs and as a loaded ground plane on others.

I'm VERY skeptical of the 25 - 1300 MHz claim. Definitely something the Marketing Department wrote! Hey, a coat hanger will pick up SOME signals in that entire range.

If you're serious about wanting a wideband antenna, get a discone.

Art Harris N2AH

I see every reason to monitor cell calls if I could. I could eavesdrop on drug dealers and thereby help clean up my neighborhood; I could listen in on business competitors and learn trade secrets, who was cutting their paycheques and giving them instructions, etc. Or I could just learn from them how to cut deals. I could find out who was sleeping with whom and know about my chances with some girl before I've met her... etc. All this could happen without me leaving my living room. What kind of money and power are available to those who listen in on the police and fire departments?

In other words, yes, you are missing the point!!

Looks very nice but I did notice something wrong with the GHFS freqs
listing.
8968 and 17976 are no longer a part of the GHFS system so you may want to
remove those ones.

I'm looking forward to the HF stuff...keep up the great work.

You didn't mention what "not working" entails. I have seen problems with dead audio that stem from bad electrolytic caps on the main circuit board. This problem essentially mutes the radio. Messing with the squelch will not generate noise from the speaker.

I owned a pro-92 for about 3 days. In my area (Redding, CA), it was terrible at picking up our police dept (800 motorola system). I know this because I had my trusty Pro-91 next to it also trunking! I now have the pro-93 and it is great! One glitch I have yet to mention to RS. While my scanner is scanning (I scan a Type 1 Motorola system here) and I (de)activate other banks, sometimes my scanner goes into a Type II Motorola trunking mode. Problem: the scanner stops on the data channel and/or on sub ID I'd rather not hear (and they show up as 5 digit User ID-thus the type II system.) If I turn off the scanner and back on, it remedies the problem.
A minor glitch I will definitely deal with: it doesn't happen but 40% of the time; it is easy to temporarily fix; everything else on the scanner is awesome.

Brandon:
You are very right; the GHFS freqs and station schedule on George Fetter's site are ancient and wrong.
Not only did 8968 and 17976 disappear from GHFS in July 1998, but also the Bayonne and MacDill sites were removed at the same time. The Loring site was removed several more years EARLIER!
And finally, in 1998 the Salinas PR site was added (remoted to Andrews), Sigonella was added (with its own set of freqs) and Incirlik was removed.
Also, the operating schedule for the stations is totally incorrect, for example ALL stations now operate 8992.
Best to go to the www.Grove-ent.com site and follow the links to the up-to-date list that Larry Van Horn maintains there.
I also took the time to check out some of the other freqs on the Fetter site, for example his listing of the FACSFAC freqs; unfortunately they also are woefully outdated.

Greetings,

I'd like to know if something like ths exists.

A scanner (handheld) that I can plug in, go to the internet and download popular frequencies from my area (Southern California) and load them right into the scanner, turn on the scanner and start listening to police, fire, weird freqs, ham, amusement parks, etc.

Or is there a place to buy discs with frequencies on them (from private parties?)

Which handheld would do this?

I use Windows 98SE and WinME.

Please let me know!

Thanks for your help,

Suzy Software

Allen is a bit mistaken on the FACFACJAX freqs. I got the frequencies right from the Navy FACFAC Operations Manual 3000.1D which was revised on May 01, 2001. See for yourself, this manual is available at http://www.facsfacjax.navy.mil/. Seems to be alot of activity on those freqs for being out of date Allen can you explain? Can you explain why on those freqs you hear alot of SEALORD comms? If these freqs are out of date can you explain why SEALORD will assign the printed Air-Air Descrets during training missions?

Sorry Allen, I will defend the FACFACJAX freqs and I have the "Department of the Navy" 2001 manual to prove it.

Regarding GHFS, 8968 was being used by "Andrews" about two weeks ago, actually logged it. It may not be an advertised freq anymore but there still is activity on that freq.

George

>Portable? Are you going to be carrying it around with a handheld radio?

Maybe with a handheld, maybe with a base like a 2006. By portable I mean sort
of a remote temporary set-up. Operating it from a tent or perhaps a cabin.
Sure if the car or truck is with me I can put the mobile ant. on the vehical.
But sometimes we travel in my foot or quad.

>The mobile mag mount antenna HAS to have some sort of groud plane to
>operate against.
So then I guess I should go with building radials for it as my very first post
implied?
THANKS, Gene

Many of the Amateur Radio manufacturers such as Yaesu and Icom have programing software for their radios and receivers. I don't think it's as easy as you wish but you can download frequencies from whatever source you have then cut and paste them into the programing software and upload them into the radio.

Then get a mobile and mount it to a plate with four angled ground planes. I believe that AS makes one just like this. Or make a plate with one vertical element and one element 120 degrees away. Use the 234/f (where f+ lowest freq) to determine length. You can do this with whips from R/S.

email me if you want a pic.

# 2375. Computer monitor RFI tip

Newsgroup: rec.radio.scanner
Date: 2001-11-17 17:47:01 UTC
From: NightRunner <jackfrostnippin@yernose.com>
Message-ID: <3l8dvto8t46inc807t8ukhbd30nujco1ot@4ax.com>
Source record: 56829

Thought I'd share this with you all...

I've just recently got myself an AR8200, and I've been enjoying myself with it tremendously, *but*, one thing that has REALLY bothered me is that I like to decode SSTV pictures from 14.230 MHz, and the noise from my monitor has made it nearly impossible. Well, this AM while I was getting something to eat from the kitchen, it suddenly occurred to me that maybe I couldn't eliminate the noise, but maybe I could *move* it off channel!

Sure enough, I sat down at my machine and tried some different screen resolution settings. My usual 1024x768 was third worst (1280x1024 came in #1 noisiest, 640x480 #2 noisiest), but 800x600 has less than half the noise. Even better, 1280x960 has almost no noise at all, but the screen looks badly warped and it's probably not good for the monitor to keep it going that way constantly.

At any rate, the noise level in 800x600 mode is clean enough for me to get some good pictures, and I'm happy as a clam :-)

If it works on 14.230 MHz, then I am fairly sure this technique can work for a great spread of computer monitor induced noise. If you have a favorite frequency, but your computer monitor is splattering it, try it out!

Do a little more research and you will find there are more sources than
3000.1D, more FACSFAC Sites, and more published discrete HF freqs. Hint: think
Seabreeze, just for one.

Sealord is FACSFACJAX
GiantKiller is FACSFACCAPES
SeaBreeze is FACSFACPensacola
Beaver is FACSFACSandiego.

Which are you trying to display?
Your title on your site says FACSFAC.
I see your latest message here carefully changed the wording to "facsfacjax."

No need to get nasty. In your previous message you said "It has been moded
though."
Now you're saying ""It's un modified now Bozo."

Which is it?

Also, I'm aware of mods to open up 800 to 900 MHz, but not 520 to 760 MHz.

Your original post said it covered 25 to 1300 MHz. Now your saying something
different. I think the failure to communicate is on your end.

The wording on the website (www.MilAirComms.com) has always stated the
following for VHF/UHF:
Fleet Area Control & Surveillance Facility (FACSFAC) Jacksonville, FL
That never changed. For the HF section it was stated Jacksonville
(SEALORD) or Virginia (GIANTKILLER) for each of the frequencies listed.
As I'm always adding to the page I'll get to the Other FACFAC Sites
once I get time to make the update.

It's not rocket science. Demods/decoders are commonly available for
all the digital cellular modes. They're just packed in an ASIC which
makes it hard to use for scanning. Who do you think wrote the
algorithms that are in the phones? Geek engineers just like me.

Uniden couldn't benefit from including cell demods in their scanners
because they can't sell scanners that scan the cell phone bands.
Right? So it doesn't make sense to sell the technology to Uniden now
does it?

```
According to deja news archives, you haven't made any usenet posts until the
last few months. First you started under the alias of "nunya", then
switched to
"capra". You appear to be a liar, but if you are not lying then post the
e-mail
address you have been using here for the last "6 years".

Otherwise, you are nothing other than a bald, hairless, liar!!!

The original cordless phones (mid 1970s) used 49 Mhz to go from the phone to the base and a little above 1700Khz (FM) to go from the base to the phone. That is just a bit above the AM broadcast band. The signal is probably as wide as it is because you are tuning some kind of product (not an exact harmonic it would seem) of the 1700Khz signal. Both signals were FM and the second harmonic of an FM signal would be wider than the fundemental signal. See if you can hear the base around 1700Khz.

Here are a few sites that have good info. I've never tried SatCom myself since I'm not able to put up much of an antenna but it does sound very interesting. I guess people often hear comms on 261.750 NFM (I believe that is the freq) between some of the ICE flights headed for Antarctica.

http://milsatcom2000.50megs.com/

http://www.ute-monitor.org/satcom/

And if anyone has had luck with SatCom say in an apartment please let me know how you did it. I live in an apartment and unfortunatley cannot put up directional antennas on the roof :( I am currently stuck using a Scantenna mounted in the attic, but it seems to work pretty good IMO.

Have fun!

Brandon

# 2404. meteor scatter?

Newsgroup: rec.radio.scanner
Date: 2001-11-18 04:47:41 UTC
From: Brandon <brandon@mail2.sandlot.com>
Message-ID: <N3HJ7.16982$Sx.5337566@news1.elcjn1.sdca.home.com>
Source record: 56705

Can anyone confirm if I am hearing it? I have been monitoring 52.525 (6 meter simplex) and every once in awhile I will hear a station that sounds like he is in the middle of a QSO. It seems to last for about 10-15 seconds then it just dissappears, even with the squelch open. This makes me think I am hearing meteor scatter as I was looking at one of my old Pop Comm issues and read an interesting article about it. This sounds like the symptoms as they described.

I am just wondering if I'm hearing meteor scatter or am I just letting my mind play tricks on me since I am pretty excited about tonight!

thanx

Brandon

I did buy both from radio shack, and now I am trying to decide which is best.

The 92 seems to have more features, so I wonder why the 93 is the same price. I only have 17 days left to decide, and I am agonizing. I put the 93 on one side of my head and the 92 on the other side. They both seem to bring in sounds, but distinguishing them is difficult. I then rotate my head 45 degrees, and I still can't tell the difference. I repeat until I am 360 degrees. At this point I do it again only backwards. I still can not tell the difference. The 93 is one higher than the 92, but one less than the 94.

Then I try the exact same experiment, only with headphones. - Same result.

Is there some way to distinquish them?

I figure the radio shack people know what they are doing.

Please help, or I will have to buy them both again till I can decide.

Uniden offers such a service, I believe. I've never used it. I know you can hook some of their scanners to a modem and dial a 900 number, and I believe some models don't even need a modem, but I'm not sure. I have a BC-245 Trunk Tracker and recall reading something about this in the manual, but I've never used it, and the manual is lost in a pile somewhere. You might try Rich Well's excellent scanner website: www.strongsignals.net and search around a bit.

My scanner(Pro-62) is starting to fall apart after 6+ years of use. I'm low on money so I'm thinking to just repair my radio, but I'm wondering if it's worth it. Am I better off trying to sell it and then paying the balance for a new scanner? It cost me $299 new, what can I expect for now?

Don't bother looking at stupid programs like ScanCat. They spent all these years making a program to contol the scanner! It looks like a little scanner on the screen, and you can scan up and down, and type in little fequencies one by one by hand. It even has a little knob that you can turn with your mouse in about 4 clicks. Painful. They never caught on that the computer should upload and download massive bunches of frequencies with drag and drop, cut and paste. What a waste!

Of course the people who spent all that money for this stuff defend it cause they spent all that money. What a joke.

AMATEUR RADIO NEWSLINE(tm) REPORT #1266 – NOV. 16, 2001

Amateur Radio Newsline report number 1266 with a release date of Friday, November 16th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio operators respond to a plane crash in New York City and Russia says “No” to No-Code. These stories are first on Amateur Radio Newsline report number 1266 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS HELP IN AFTERMATH OF NYC JETLINER CRASH

Ham radio operators in New York City, still weary from the aftermath of the September 11th terrorist attacks were called out once again. This, after an American Airlines jetliner in route to the Dominican Republic broke up in flight shortly after takeoff from Kennedy Airport. The Airbus A-300 had 265 passangers and crew. It crashed moments after takeoff setting homes ablaze on thrr Rockaway penninsulia. There were no known survivors. We have more in this report:

--

When American Airlines Flight 587 crashed just minutes after takeoff from Kennedy Airport in New York City on November 12th, the Salvation Army was one of the first groups to arrive at the disaster scene. It brought in several mobile canteens to help feed rescue workers and residents whose houses had been damaged or destroyed.

The Salvation Army regularly uses ham radio operators in its SATERN network to maintain communications between its units at a disaster site. This being the second disaster to hit New York in two months' time, the Salvation Army Incident Commander asked the SATERN disaster command operator, Carlos Varon, K2LCV,to request additional ham volunteers. Operators were needed to staff the canteens and a mobile command post.

Initially up to a half dozen ham stations were to be set up at various locations near the crash site and another at Salvation Army Headquarters in Manhattan. It was anticipated that the communications mission would last three to four days.

Also, according to ARRL New York City and Long Island Section Manager George Tranos, N2GA, the League's Amateur Radio Emergency Service was on standby for the American Red Cross. Hams were later reported as providing communications support to the Red Cross for its operations.

But getting to any assignment was not easy. New York officials initially feared this was another terror attack and put the city into a near lock-down, closing all airports, bridges and tunnels for several hours after the crash. In addition, the crash site itself was on an island, and access to the area was severely restricted. All this made it difficult for ham volunteers to reach their assignments. Finally, they were all told to gather in one place where they would be escorted in by a Salvation Army command vehicle.

Among those who helped organize the ham radio response was Mark Phillips, KC2ENI, the ARR Emergency Coordinator for Queens County. The Rockaway Command station was Joseph Albertus KB2QLE and Net Control on the 147.090 MHz repeater was Michael Lunetta W2MPL.

From the offices of CQ Magazine, I'm Rich Moseson, W2VU.

--

Authorities who found the flight data recorder said it contains information leading to an initial conclusion that mechanical failure of the Airbus jet was the cause of the crash. (W2VU, WB2FXN, K2VMR, N2GA, and communications monitored on the 147.09 repeater)
**

RESTRUCTURING: RUSSIA SAYS NYET TO NO-CODE

The Russian Federation has said ‘nyet’ to no-code. According to the W.I.A. Victoria News, the Federation says that there are good reasons for the Amateur Service to continue with Morse as a license requirement for operation below 30MHz. It also says that it has no plans to make any changes to its domestic licence conditions. Amateur Radio Newsline’s Roy Neal. K6DUE, takes a look at the surprise Russian position:

--

"Keep the Morse Code." That's the position of The Russian Federation. It was revealed by the International Telecommunications Union on the 12th of October, when that organization released a position document for the World Radio Conference of 2003..

The Russian Federation told the ITU that it supports most changes to International Radio Regulation S-25, which sets forth qualifications for radio amateurs. But, says the Federation, keep the Morse code. Reasons? First a strong belief that Morse testing is the big difference between Amateur Radio and the Russian version of Citizen's Radio Services. The Russian Federation also points out that lowering the code requirement in many other nations has not led to a significant increase in the number of hams in those countries.

The Federation says that it surveyed Russian radio operators and found overwhelming support for retention of the code and the Russians say Morse is one of the most effective means of communication in emergencies with clear benefits in reducing interference on the high frequency bands.

What does it mean to the rest of the world, this decision to retain Morse testing? Jim Linton, VK3PC, is the author of Australia's "Morse Code Watch."

He says the Russian Federation's position can be accomodated easily. This because any new I-T-U Radio Regulation S-25 to come out of the World Radio Conference in 2003 will set only a minimum qualification standard for radio amateurs. It will not force that standard on any country.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

As previously reported, the IARU Administrative Council voted on October 8th to support dropping Morse as a qualifying criterion for high frequency access. It says that Morse testing is no longer relevant to the healthy future of amateur radio. (W.I.A. Victoria, W5YI Report)

**

THE 100TH ANNIVERSARY OF MARCONI'S HISTORIC TRANS-ATLANTIC RADIO TRANSMISSION

I’m Bill Pasternak, WA6ITF, in Los Angeles, with a late breaking bit of radio history.

December 12th will mark the 100th anniversary of the first Trans-Atlantic radio transmission by Guglielmo Marconi. To commemorate the event, The Marconi Radio Club and The Falmouth Amateur Radio Association radio operators are making plans to celebrate this important historical event from December 11th to the 16th. And in this very rare recorded interview supplied by Q-News, Marconi himself commented on the his first contact across the Atrlantic pond. Take a listen:

--
Audio of Marconi commentary here. No text available. Please listen to audio newscast. Links are at http://www.arnewsline.org.
--

The signal Marconi referred to was a series of the letter S transmitted using CW across the Atlantic from Poldhu, Cornwall England to St John's, Newfoundland. For this 100th anniversary, the Marconi Radio Club will be using the call sign W1AA slash CC and will be operating from Cape Cod, Massachusetts, U.S.A.. This was the location of Marconi's 1903 Trans-Atlantic radio station. Marconi's 1903 call sign back then was "C C"

For exact times, frequencies and modes of operation for W1AA slash CC go to www.qrz.com/database?callsign=w1aa) (K1VV, Marconi Radio Club W1AA. Marconi audio supplied by Q-News)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the X-Warn repeater serving Green County Ohio.

(5 Sec Pause Here)

**

AMERICA AT WAR: G3 MAY HAVE TO WAIT

It now appears very unlikely that new G 3 personal communications technology will share the same spectrum worldwide. Amateur Radio Newsline’sa Henry Feinberg, K2SSQ, tells us the U-S military has other ideas:

--

While Europe and Asia have reached accord on commen frequencies for the introduction of G 3, the September 11th terrorist attacks in New York City and Washington have convinced the Departrment of Defense to take a different position. The DoD now says that it is not in the national interest to relinquist spectrum in the 1710 to 1850 Mhz band just because that happens to be the same spectrum to be used commercially overseas.

According to the latest issue of the W5YI Report the Cellular Telecommunications and Internet Association says that the Department of Defense will encounter interference from 3 G wireless devices but the DoD disagrees. It says that whatever equipment it has is far more powerful. The DoD adds that it may interfere with 3 G cellular telephones oversaeas but that the cellphones will not adversly impact on the military or its operations.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

In other words, over here in the United States, if G 3 wants 1710 to 1850 Mhz -- its going to have to wait. (W5YI Report)

**

AMERICA AT WAR: EMERGENCY CELLULAR TELEPHONE PLAN

Verizon Wireless and the United States government are in the final stages of a deal that would give some emergency officials priority access to the company's cellular network. Under the agreement, about 2,000 federal, state and local officials would be given a code that allows them priority over others trying to make calls.

The system, intended to be used only in times of crisis, would be operational in New York, Washington and Salt Lake City, the site of the 2002 Winter Olympics. Verizon has submitted a request to the Federal Communications Commission, which must review and approve some elements of the plan. According to a government official who spoke on condition of anonymity, others trying to make calls could get busy signals because of the plan. (Published news reports)

ENFORCEMENT: FCC TO CB OPERATOR – TIME TO PAY THE FINE

The FCC has told a mid-West C-B operator that he has to pay the price of breaking the rules. This after the agency affirms a $9500 Monetary Forfeiture issued last summer to Klaus D. Kramer of Oklahoma City Oklahoma.

--
The Klaus Kramer story goes back to last February. This is when the FCC received several complaints of a CB radio station operating with excessive power in Oklahoma City. The Dallas office sent agents to locate the source of the transmissions. In the course of the two day investigation the agents traced transmissions to three locations including Mikes Cycle Shop. The latter is a business owned by Klaus Kramer.
The agents conducted inspections that revealed that Mr. Kramer violated Section 301 of the Communications Act by operating radio transmitters without authorization. Kramer admitted to making the transmissions and voluntarily relinquished the equipment. On March 12th the Dallas office issued two Notices of Violation to Kramer. In response to the Notice's of Violation, Kramer acknowledged the violations and indicated that he would discontinue operation of the station. On July 13th, the Commission's Dallas Texas field office issued the Notice of Apparent Liability for Forfeiture in the amount of $9500 to Kramer for the noted violations. Kramer filed a response to the NAL on August 14th claiming that the amount was excessive.
In denying Kramers appeal, the FCC's November 8th order says that its Dallas office has complaints regarding similar operations on two separate occasions in March 1998 and October 1999. In both of those instances, Kramer also voluntarily the offending equipment and on at least one occasion stated that the violations would not be repeated. None the less, the FCC says that its investigation has revealed that Mr. Kramer again: "...violated our rules" in February 2001. Thus says the government, imposition of the $9500 is not excessive and is proper in this case.
For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, reporting.
--
Kramer was given the usual thirty days to pay the fine. He also has the option of further appeals. (FCC)
**

ENFORCEMENT: FCC TO STATION OWNER - YOU ARE OFF THE AIR

Hams are not the only ones feeling the pinch of the Federal Communications Commission action. Five Midwestern radio stations have gone off the air after the agency denies an appeal by their owner who the FCC says was found unfit to continue to operate them.

Back in 1994 the owner was convicted of crimes involving minors. He was sentenced to an eight-year term and was released in 1999 after serving five. Last July he was told by the FCC that he no longer held the minimum requisite requirements to remain a Commission license. Also, that he would lose his licenses to operate the stations within 90 days.

Last month he petitioned the FCC to allow him to continue operating the stations. The FCC denied his request on October 3rd and the stations stopped broadcasting just after midnight October 4th. The FCC says it plans to auction off the station licenses. The owner is reportedly considering an appeal. (FCC, other published reports)

**

FCC NEWS: MASS MEDIA BUREAU APPOINTMENT

Nina Shafran has been named Deputy Chief of the FCC’s Mass Media Bureau Audio Division. Shafran joins the Commission from the staff of the Dow, Lohnes & Albertson communications group where she specialized in broadcast matters. (FCC)

HAMVENTION UPDATE 2002: DISPELLING RUMORS

If you are one of those who heard a rumor that the Dayton Hamvention is leraving its longtime home at the HARA Arena, then forget it. Its nothing more than the normally irresponsible Internet rumor mill working overtime. Bill Pasternak, WA6ITF, has more:

--
According to planners posting to the official Hamvention website, the erroneous rumor began the week of Hamvention 2001. This, after it was was allegedly printed in a Chicago newspaper that the HARA Arena had been sold. It had not been.

The Hamvention Committee spent the weekend of the 2001 event reassuring its vendors and attendees that HARA had not been sold. Also, that Hamvention's contract had not been "bought out" and that it would be back at HARA.

But that’s not all. The HARA Arena management issued its own formal statement. It also satated that the HARA had not been sold, and that it will not be razed. We at Amateur Radio Newsline were there. We heard it first hand.

Most important the HARA folks reitterated what the Dayton Amateur Radio Association has stated. The Hamvention will be there as promised. And as those of you who received last months mass mailing already know, the dates are May 17th, 18th and 19th, 2002. We will see you there.

For the Amateur Radio Newsline, I’m Bill Pasternak WA6ITF in Los Angeles.

--

So much for the rumors on the Newsgroups and other internet gossip spots. The real story is always at www.hamvention.org. (DARA)

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to
televisions that can receive digital signals by that date. (News release)

HAM RADIO IN SPACE: ISS TALKS TO WISCONSIN SCHOOL

Students at Tremper High School in Kenosha, Wisconsin, asked questions the morning of November 6th of the International Space Station Expedition Three Commander Frank Culbertson that got some very personal responses. Culbertson told the teens that he certainly did not expect as much to be happening on Earth during his stay at the orbital outpost, in obvious reference to terrorist attacks. He said that he wished that he could have been with his family during the most stressful times, but he took comfort in knowing that they were strong, and could get by.

On a brighter note, Culbertson said that his current mission is the high point of his space career. He added that he hoped some of students at Tremper High can do the same thing some day.

In response to another question, Culbertson said that he hoped to see cheaper access to space, and hoped for a manned Mars mission and a permanent lunar base during his lifetime.

The contact was an event facilitated through the Amateur Radio on the International Space Station project, sponsored by AMSAT, ARRL and NASA. In all, fourteen students asked one question each during the contact. About 60 other students and a few teachers witnessed the event in person, while M-S-N-B-C carried the audio portion of the contact live over its website. (ARISS release by Gene Chapline, K5YFL)

**

HAM RADIO IN SPACE: NEW ANTENNAS HEADING TOWARD THE ISS

The International Space Station could have a new set of ham band antennas by early in 2002. The antennas are expected to be trtansported to te ISS this month and installed around the perimeter of the Service Module. This will give the I-S-S ham station high frequency, VHF, UHF and microwave capabilities.

The most interesting of all the new antennas is the high frequency array. Its made up of a two and one half meter long flexable tape that will definately work on 10 meters and holds posibilities on 15 and 20 as well. This particular antenna was a joint effort of the Italian, Russian and United States ARISS design team. (ARISS)

**

HAM RADIO IN SPACE: STARSHINE NEEDS TELEMETRY REPORTS

Ground controllers of the Starshine-3 ham radio satellite are seeking volunteer amateur radio operators and others worldwide to monitor and report telemetry from the recently-launched satellite. Starshine 3 transmits 9600 bit per second AX-25 protocol packet telemetry every 2 minutes on 145.825 MHz.

The satellite’s primary mission is to involve school children from around the world in space and radio sciences. Students should be able visually track the satellite during morning and evening passes by recording its telltale mirror flashes and reporting their observations to Project Starshine. To report Starshine 3 telemetry or to learn more about it, please visit http://epulation.com/starshine/starshine3. More information about Project Starshine is available at www.azinet.com/starshine. (STARSHINE vis AMSAT-NA)

**

CONTESTS: THE PSK-31 DEATH MATCH

Call it a truly different kind of contest. This, as the Michigan DX Association announces that it will sponsor the PSK-31 Death Match. The dates are December 7th through the 9th and a trophy will be awarded to the highest overall score. Just what is the PSK-31 Death Match and what are its rules? You can find out on the web at www.geocities.com/mdxa1/death match.html (Internet release)

**

DX

In DX, a big surprise for 6 meter enthuiasts. Jeramy boot, G4NJH, has the details:

--

A combination of high solar flux and low magnetic activity provided world-wide F-layer propagation on 50MHz during the week up to the 4th of November. Strong backscatter and the occasional Sporadic E openings meant that all continents were worked from the UK on 50MHz during the course of the week.

On Tuesday, the 6th of November, a solar coronal mass ejection hit the earth's magnetic field at 0150UTC and triggered widespread auroras. Observers as far south as central California reported seeing vivid displays of the Northern Lights, although we had no reports of visible auroras in the UK at the time of compiling this bulletin.

--

As we go to air 6 meters remains a worldwide D-X paradise. More information is on the web at www.rsgb.org and on the subscription VHF reflector. (G4NJH)

In other D-X news word that two Spanish operators will be in Cameroon between the 11th and 23rd of November. The pair will be working on the installation of HF and VHF stations in hospitals and missions. In their spare time they will be on the air as TJ2RSF on the High Frequenvcy bands. Activity will be mainly SSB, with some RTTY and CW. (VHF Reflector)

And Chris Post, N3SIG, who is a Firefighter and EMT in the United States Antarctic Program at the McMurdo Station on Ross Island is now active as KC4/N3SIG until March 2002. Post told the Ohio Penn D-X newsletter that he will be active every other day starting around 2000-2100 Eastern U.S. time primerally using SSB on 20, 18 and 15 meters. All QSL cards go to AI3D and be sure to include an S-A-S-E. (OPDX)

**

THAT FINAL ITEM: HAM RADIO IN LEBANON

And finally this week, a look at how ham radio is able to survive in Lebanon. Q-News Graham Kemp, VK4BB, looks at the nation, its licensing system and its Amateur Radio Community:

--
Wireless communication was first introduced in Lebanon by French soldiers during the French mandate; consequently, a number of curious and interested Lebanese took on this hobby and started operating under a permit and a call sign provided by the French Authorities.

With Lebanon gaining its independence in 1943, the Ministry of Post and Telecommunications become the issuer of the license to own and operate an Amateur station.

In 2000, there were 230 licensed ham operators in Lebanon, and anyone over 18 years is eligible to acquire a radio amateur license.

Maximum authorised transmitting power is 1,000 watts. The exam is prepared by RAL and is supervised by governmental officials. It comes in three separate parts, which involve multiple choice questions which include theoretical questions on electronics, antennas, and other technical information. Also rules and regulations of amateur radio, and the laws of communication. Also, a test on how to establish a vocal contact over the air.

Their Society is the RAL-- the Radio Amateurs of Lebanon which, like ours represent him or her before the Local authorities and the IARU

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Truly an amazing story of how ham radio can survive even in the midst of geo-political problems that have plagued the Middle East for as long as man can remember. (Q-News)

I watched the shower Saturday night. What you are hearing is a meteor.
When a meteor stikes the Earth it ionizes the atmosphere for a few seconds
making E-skip. That and amateur operators often use a 15 second Tx Rx
pattern during meteor scatters.

# 2425. RG-6 Coax - 75ohms?

Newsgroup: rec.radio.scanner
Date: 2001-11-18 16:55:51 UTC
From: tremors834@aol.com
Message-ID: <20011118115551.22544.00000930@mb-cg.aol.com>
Source record: 56726

Hi,
I read at times on the group or web pages that some people use RG-6 between their antenna and scanner.
1-Isn't RG-6 75 ohms?
2-Should you use 50 ohm coax instead?
Thanks, Gene

Buy them both. They complement each other.

I have a question about your test results. The 93 is, as you point
out, one number higher than the 92. But I also know the 93 has 300
channels, vs the 92's 500. So...

Which way did your head lean? That will give us (at long last) the
relative weight of channels vs model numbers.

Ken Plotkin

# 2429. Re: RG-6 Coax - 75ohms?

Newsgroup: rec.radio.scanner
Date: 2001-11-18 18:34:31 UTC
From: Harris <n2ah@spam.sprynet.com>
Message-ID: <XaTJ7.141240$%94.24518334@news02.optonline.net>
Source record: 56731

RG-6 is 75 ohms. You should use it because it's low in loss, inexpensive, relatively small in diameter, and has both braid and foil shields.

If your antenna were truly 50 ohms, you would have a 1.5:1 VSWR with 75 ohm cable. That is perfectly acceptable. In reality, the impedance of your antenna will vary with frequency.

One warning with RG-6: It's braid is impossible to solder to. I recommend buying it with "F" connectors installed. Then use adapters to mate with BNC or UHF connectors. Contrary to urban myth, good adapters have virtually no loss below 1 GHz.

Message-ID: <3BF811A8.5562161F@cablerocket.com>
Source record: 56737

I have a brand new Discone antenna that I bought on the internet. I put it together but never put it on my tower. I was going to use it to transmit on the ham bands 2 meters and 70 CM. I never got it up. I am not sure who makes it as I threw out the box it came in. I know it is not a Radio Shack discone. I have a picture of it if that helps. Will trade it for a Scanner.

Please email me direct.

Don

I've noticed that may college coaches are using a Telex wireless system for their sideline to pressbox communications. Anyone know details concerning these systems - frequencies, etc?? Thanks...

# 2437. disturbing noise on Yupiteru MVT-7100

Newsgroup: rec.radio.scanner
Date: 2001-11-18 21:59:46 UTC
From: m_korium@hotmail.com
Message-ID: <ae5baadc.0111181359.408dd725@posting.google.com>
Source record: 56738

Hello,

Has anyone succeeded in decreasing or suppressing the constant noise
that ca be heard when the volume is totally turned down? This is
especially disturbing when listening via headphones. It seems to be
that the nf-signal-output is beeing mixed with the internal
beep-tone-source. In that case, it should be possible to separate
these two signals, or to modify it that way that the
volume-potentiometer also takes effect on the mentioned noise.
In this connection also a schematic would be helpful.
Any suggestions are welcome.

regards

I have a Pro2042 w/ the OS535 PC interface and a Pro2052 also with a PC interface. . . . I have a Antennacraft Scanntenna on top of my house.... How do I connect both Scanners too the Antenna? Is it just as simple as getting a BNC Y adapter?

Next question. Can I connect both of the Scanners to My PC one through COM1 and the other COM2?

I have been using Probe 6.0 on the PRO2042 and love it!!!

I just got the Pro2052 today and plan on using the PC interface on it also.
.
I'm still looking for some good software for it. . . maybe ScanPro2052?

Thanks J Ludwick

>2-Should you use 50 ohm coax instead?

It's not critical for a receiver only for a transmitter. 75 ohm coax will work fine for a scanner. I use it all the time.

>ITS UNIDEN NOW, BUT OVERSEAS, I BELIEVE , IT'S ---GRE, MAKES 'SOME'
>HANDHELDS!

Here it is.

Uniden
pro-94
pro-2052

GRE
pro-93
pro-92
pro-79
pro-89
pro-2017
pro-2053
pro-2067

These are the current models in the 2002 cat.
There used to be more uniden made ones, but RS seems to be going back to GRE.

HI,
You'll want to take a look at http://www.MilAirComms.com then read the
review on the "Stridsberg Receiver Multicoupler". There I review of the
Multicoupler plus explain the different between using a Multicoupler and
just useing a BNC T- Connector.

I'm using a CATV 1 GHz splitter. Its cheap & works great! There is 3 - 4 dB insertion loss but not notice difference.

I'm running 4 radios on PC using 1 com port & data switch.

Good Luck

>2-Should you use 50 ohm coax instead?
>Thanks, Gene
As a practical, a precise impedance match is desired, but the reality
is the input impedance of the scanner also varies over frequency, and
is often simply referred to as Hi-Z or Low-Z, where low Z is 50-75
ohms.
The actual increase in loss that results from using a 50 ohm coax
instead of 75 ohm or vice versa on a receiver is trivial. It is a
bigger deal on a transmitter, but even a VSWR of 1.5:1 is hardly
horrible...

Sounds like that kid's brain you met at the local RS
was still reeling over last evening's Rave Dance he
attended if you ask me!

I SERIOUSLY DOUBT that Radio Shack
is going to stop selling loose packaged electronic
components. If they do, it will be the greatest
marketing blunder since Coca-Cola introduced
it's "new formula" a few Years ago and IBM's
introduction of the MCA bus in the (thankfully
dead!) PS/2 product line.

If Radio Shack is going to stop selling components
they will become nothing more than an overpriced
copy of Circuit City and will go down the tubes
to full scale Chapter 11 Bankruptcy in less than 2 Years.

Count on it. Mark it in the book. Sell your RS stocks now!

Low volume. That little remaining pegboard corner (they used to have 20 feet of wall space dedicated to components) will make a nice spot for a cell-phone display or fried-chicken or something else more popular than simple parts that 'nobody' buys.

## 2459. antenna question

Newsgroup: rec.radio.scanner
Date: 2001-11-19 07:04:53 UTC
From: YT <yt@MAPSONfunkychickens.org>
Message-ID: <pa2K7.212693$YL3.66038415@news3.rdc1.on.home.com>
Source record: 56760

So i introduced myself to the world of scanning with a Uniden Sportcat. i know i know - not the world's most advanced scanner, but
all i really wanted to do was listen to airplanes, and this seemed like the cheapest way to go.

And it worked really well for the first year, but lately i've been having reception problems, and it really comes down to the
antenna. I can still receive a bunch of frequencies, but all of a sudden one day, they stopped being crystal clear. This puzzled me
for a long time since i hadn't changed anything with the unit. Then one day i was sitting at the end of the runway and was
disappointed because i still was having reception problems. Fiddling around with the bloody thing, i pushed down on the antenna and
hallelujah -- crystal clear again. Of course, releasing downward pressure of the antenna set it back to it's poor reception, but at
least i had found the problem.

So now i don't really know what to do - don't know enough about this stuff, and i suppose i should just go back to the store and ask
them, but i thought i would ask here first. Is there an easy way to fix this - is a new antenna in order? does it sound like there's
just a connection problem? The black plastic "shield" that comprises the antennae slides up a few millimeters revealing a bit of
white plastic underneath - is this the problem ....?

Does anyone have any suggestions short of buying a "real" scanner?

Thanks in advance,
yt

Yes. Lower loss at higher frequencies. Still it's 75 ohm type cable, not 50 ohm like RG-58

If you do not notice a 3 - 4 dB loss you're probably only
listening to strong signals. On weaker signal you'll definately
notice a difference.

# 2465. 800MHz Reception Help

Newsgroup: rec.radio.scanner
Date: 2001-11-19 10:50:17 UTC
From: RaZ0r! <extreme_gamerSPAM@NOThotmail.com>
Message-ID: <MBqK7.280761$Lg.13340293@sjcpnn01.usenetserver.com>
Source record: 56608

I have a friend that has two different Uniden scanners, don't remember the model numbers, but they are fairly new pre-trunk scanners.

In his location he cannot pick up the local 800MHz public safety motorola Type II system. He can pick up anything else, i.e. 400MHz range, but NOTHING on 800MHz. Not even the control channel, static, zip.

We tried moving to different locations in his apartment, no change, even on the balcony.

I took the scanners to my house, and they work perfectly on all freq. I could even pick up his local 800MHz trunk system and I am several towns away from it.

What could cause this, and what could I try to do to fix it? A new antenna, booster of somekind?

TIA

# 2467. Looking for someone with older Police Call books

Newsgroup: rec.radio.scanner
Date: 2001-11-19 12:49:40 UTC
From: KC8PMX <kc8pmx@tm.net>
Message-ID: <Ed7K7.753$m%.185706@monger.newsread.com>
Source record: 56767

I am looking for the callsign for a particular entity. If anyone has any of the "Police Call" books from the timeframe of 1988-1993 for the state of Michigan/Ohio and can look this up for me I would be greatly appreciative.

Looking For:

Northwood Institute (May also be listed as Northwood University)
Midland, MI
Frequency : 464.825

The call is not listed in my most recent edition and I know they used to have a callsign.

Thanks,
Ryan KC8PMX

You'd be much better off buying a seperate mobile antenna made for scanners.
They're not very expensive.
(If you are mobile scanning where it's not legal, it might be safer using
your AM/FM antenna :)

# 2471. WTB: Original antenna for Icom R10

Newsgroup: rec.radio.scanner
Date: 2001-11-19 14:30:05 UTC

It was more than just a marketing blunder. They had invited Mucrosoft to jointly develop the operating system for the PS/2 systems. No prizes for guessing that OS/2 was mucked up so badly that it was not ready for the launch of the PS/2 systems.

Considering that the markup on those parts is more than anything else that they sell, it would definitely be a mistake. Don't just sell RS stock, short it!

Kinda sucks. I was just at RS picking up a few components yesterday to
finish a project. Good thing I have an Active Component in the area.

www.digikey.com is a great source as well.

I understand that "Shelf Space" Is important to make more bang for the buck.

But unfortunatly RS is slowly molding themselves into just high priced RCA
retailer.

Would like a Cell Phone with that ?

Either my Yupi 7100 is exceptionally quiet or yours is exceptionally noisy. With the squelch closed I can barely hear anything but the tiniest hiss, and with the volume maxed I only get a little tick, tick of the scanning in progress......

BC780XLT for sure, AR8600 probably. Most likely most with a RS232 interface and PC software will do it from a service Uniden offers. I haven't used it, but I've heard their lists aren't that complete, and it's a "pay per view" thing.....

In the UK, RS shops used to be called Tandy, selling the same sort of
stuff as in N America, under the Realistic brand.. Well a couple of
years ago Tandy sold out to a Mobile Phone company, where the Tandy
shops were are now Mobile Phone shops :-(

Is it just me or every time you walk into my local Radio Shack are you bombarded by the "need a cellphone?" and "we have great deal on satellite dishes" comments from the employees and managers. Yet these same idiots don't know shit about electronics. I mean shit its called RADIO shack not CELLULERShack or DIRECTVSHACK.

Saturday I walk into RS looking for 20 - 25' of electrical cord and employee says don't sell electrical cable by the foot anymore? I say OK how about an extension cord I can cut up? Guy shows me cords and all extension cords are 15' or less and expensive as hell. Then he jumps right into the need a phone need a satellite dish routine. They are so damn annoying. Not to mention I have been in there a bunch of times and told them I have a dish and am wearing a cellphone on my belt! While looking for some BNC connectors all they kept bragging to each other about to how many dishes they had sold or hoped to sell today. What a bunch LOSERS. Place was full of cheap Chinese electronic toys that they sell for twice what Toy s R us or Target gets for them. And dated computers and electronics all selling for a premium. Who buys a DVD player or a TV at RadioShack???

These guys have to be dying a slow miserable death how can they stay in business? My local store has 1 clueless MORON manager, 1 clueless assistant moron manager and at least 3-4 Moron trainees. Usually there are 3-4 working anytime I go in there how do they do it. How much can they really make selling cellphones and dishes?

And all of the "modern" RCA (Thompson) stuff
today is Made in China and is ABSOLUTE JUNK.
Check with any TV repair shop and ask them about
RCA or GE or Proscan or Realistic and all
of them will tell you to stay away from it like
it was infected with HIV or similar.
Even the new Consumer Reports 2002 buying guide
ranks RCA at the top of the list for repairs returns.

## 2482. Don't Try This At Home!

Newsgroup: rec.radio.scanner
Date: 2001-11-19 18:39:26 UTC
From: salwar_kameez@hotmail.com
Message-ID: <74139a0f.0111191039.2a605c20@posting.google.com>
Source record: 56781

I have a 91-year-old house and have been hanging out mostly in alt.home-repair since I bought it, but there is a nasty divorce going on next door which renewed my interest in all things scanner. I got my toys out and dusted them off and ended up at Radio Shack buying a bare copper wire for my shortwave too, for the heck of it...maybe I can catch Abdul and Omar trading insults over their walkie-talkies.

Now, all the circuits to the kitchen and laundry room are modern and grounded, but all the circuits to the upstairs are not modernized. A couple of years ago I went and bought a beautiful brass wall light fixture and put on the bedroom wall. I even installed a switch since that wire wasn't switched. That circuit isn't grounded but it's just lights and stuff. I also have a little brass ring that i put essential oil in and it makes the room smell great when the light bulb's on, but I know, I know, you want to hear about the adultery next door. Well I've got something even better--a near-death experience!

I got the bright idea to hook one end of that bare copper wire to the highgest radiator in the house, on the 3rd floor--don't ask me why. Somewhere I read that if you attach to any metal thing such as the refrigerator it helps. I thought hey, the radiators in my house make one huge metal thing!!! I put the other end to my shortwave antenna. Then I got the bright idea to string it up near the ceiling and then I got the bright idea to use that brass light fixture as one high thing to hold it up.

POP! POP! POW! POW! I had on tennies and was standing on a wood floor but before I could think I grabbed the bare copper wire and pulled it till I pulled it off that brass wall fixture. It didn't hurt me but now there are two burny marks on the wall fixture and two burned places on the copper wire!!!

I am guessing the "ground jumped" from the wires inside the light fixture to the copper wire which was attached to the radiator, because it was attached to the radiator and was thus grounded...right?

It didn't hurt any of my equipment. It didn't even blow out the bulb. It logged my computer offline or else my computer chose that moment to disconnect, but everything seems fine.

I didn't even notice any better reception on the shortwave.

As for that bare copper wire, I know you're supposed to string it outside, but just now I don't want to alert the neighbors that I have such a hobby. Is it any benefit to hang that thing up INDOORS, and if

so, can I turn a corner with it, DUH? Can I just put it up in a rectangle around one room or something? NOT hanging it on any brass light fixtures ha ha? Is connecting it to the radiator a good or bad idea? P.S. I won't touch the radiators and that brass lamp fixture anytime soon with wet feet!!!!

Problem is most likely to be at the center pin of the antenna itself and not the radio. Try a replacement antenna and see if that helps. If not, it may be the connection point for the antenna inside the radio, which will probably require a factory repair if you aren't handy with ye olde soldering iron. Early production run Uniden scanners had problems with bad center pins on the antennas. Radio shack has a newer replacement high gain rubber duck style antenna which works fairly well, look in the CB radio accessories section. (But it's not the hottest in the VHF airband, oddly). My fave airband antenna is a (used) Motorola VHF gain antenna I found at a hamfest, it even has a BNC connector. ICOM makes a mean VHF air band (only) antenna for their commercial grade aircraft HT's.

For antenna reviews check:
www.strongsignals.net

Happy Scanning! - Ted

For some reason I can't get this to work. Of course doesn't help
that I can't find the layout of the CSV file that the import utility
is expecting.

Would someone please post a few lines from a CSV file they
successfully imported into WinRadio?

Thanks.

Do y'all really think the original poster is going to come back here to read this thread and see the error of his ways? He's probably cleaning out the basement and his nephew left it there 15 years ago in a box full of comix and baseball cards. Probably put notices in rec.sports.equipment.jockstraps and rec.models.BattlestarGalactica and has moved on by now to rec.guns.bb

A nice reasonably priced alternative to RS is either
MCM Electronics or Mouser Electronics. Shipping
is fast and reasonable and they will sell to the public too.
Their Catalogs are decent too.

Pay no attention to the retard behind the counter. It's usually over
there with the spools of speaker wire etc. You'll probably have to
buy a 100' spool, though.

> Guy shows me cords and all extension cords are
>15' or less and expensive as hell.

And *all* 2-conductor. Apparently, nothing ever needs a ground lead
anymore.

>Then he jumps right into the need a phone
>need a satellite dish routine. They are so damn annoying. Not to mention I
>have been in there a bunch of times and told them I have a dish and am

I haven't heard anything about a reduction in parts, but I have been a faithful purchaser of Radio Shack batteries. I have been involved in the battery club, because you buy three packs of batteries and you get 30% off the purchase. Also, every third purchase, you get either a free 2 pack or 4 pack of batteries.
I went into the local RS and they told me that at the end of the year, they are no longer offering the battery club and that they weren't allowing anyone to take advantage of the 30% off at that time.
I thought the guy was full of S***, but after talking with a friend that works at a RS in another city, I have found that it is true. That sucks.

Guy P. Distaffen:

you are not alone my friend, we all grieve the loss of the Radio Shack Battery club. but alas we have our fond memories. i used to proudly walk into Rat Shack... and grab a pack of their puke green colored AA's... then i'd go to the register. after they asked me for my name, phone number, blood and urine samples, i would reach into my wallet with glee and announce that i have my trusty battery club membership card. while they were busy with it and scamming me about how they don't have anymore catalogs, i would insert the AA's into my walkman. i would purposely turn up the music so as to not hear their latest excuse of how aliens sabbotaged the machines at their catalog manufacturing facility. i would then turn and walk towards the door... sometimes, if i was real lucky and God was merciful, those batteries would still be working when i got to my car. membership. ah yes, it had its privledges.

phil :)

With Mouser its best to purchase online, or at least verify stock
online. Your order can easily get divided up in pieces because of
occasional backorders and if the original order said priority mail, then
you'll be getting one-off parts later at $3.50 minimum shipping each.

You're exactly right! Any salesman would rather sell a $100 SatTV
package or a $40.00/month CellPhone package reather than sell a few feet
of $0.20 cable or a $0.20 pack of resistors.

Tandy is based here in Fort Worth, and they do some strange stuff, there are large buildings here that are setting empty, because they abandoned the product line these were making, they started some other conpanys then closed them, not buying competition to close them, starting them themself and then closing them, so it is no telling what the genus behind Tandy is up to now.

Do you work for RadioShack? Sounds like offended a RS employee. First off, I really don't appreciate your asshole comment especially since you don't know enough about me to form an honest opinion. Second, I don't have to justify walking into Radio Shack do I. Like I said they advertise that they sell Radio and electronics does not electrical cable fall into that category? Finally, I went there because they are close to my house and I don't want to stand in line a home depot for a half hour for electrical cable. Not that I owe you an explanation, loser.

I have been in sales all my life own my own business and have trained many salespeople. I will give you free a tip friend, a GOOD salesman values each and every customers business and treats all customers with respect no matter how small or large because you just never know. That few feet of cable or resistors today can turn into a $1000.00 sale next time or a $10,000.00 in repeat business over time but not if you blow it on first contact. My best contacts have been made when I least expect it.

Also, calling the people at RadioShack (or insert favorite retail electronics superstore) a SALESMAN is an INSULT to anyone who actually know how to sell ! And those DirectTV dishes they were bragging about were being sold at $.01. Go check it out, they will sell you a DirectTV w/ activation for $.01, wow that really tales some sales skill. How much of a kickback can DirectTV possibly be offering? Sprint / Verizon phones start at $19.95 w/ activation. Come on they would be lucky to be able to eat a value meal a McDonalds let alone steak.

And the funniest thing is that of the employees I have talked to most have no idea how DirectTV works, what all the plans are, what the small print in the agreement says or anything else. Same goes for cellphones, I actually saw a guy tying to sell a Sprint phone compleately misrepresent ALL of the SPRINT PCS policies and technical capabilities of a particular PCS phone ( I am longtime Sprint PCS user).

AMEN BROTHER !

Yeah praise Yaego carbon film resistors - the time of the END is at hand!

Why just today I heard (YEAH!!), upon reading this sorrid
news (HAJAHHH!!) of soon no more blister-packed
470uF/35V electrolytic capacitors, that no less than three
(...OHHHHHHH GHLOOOORYYYY!!!!!!!!!) cyber geeks at TechTV
broke down and bawelled like babies (HAWWW!!!) and
were useless for anything for the rest of the day.

Grown men with BSEE and BSCE shakin like dried leaves
in the wind on da ole oak tree!! (....HOOOOOO GLORY!)
No more Korean 2N3055's 2-to-a-pack! They gonna shake
rattle and rollllll (...AMEN - PREACH IT BROTHER!!) like
crackwhores that can't get their daily fix! (HOOOOO WHEEEW!)

SOMEBODY SHOUT A M E N ! ! !

---------- END ----------

FYI: Northern Alliance is today supposed to be disarming the
population of Kabuul. Those who don't give up their weapons will be
arrested/shot/jailed. I wonder how long it will be before GWB has turn
around and treat them like the Taliban? The nooz folks have yet to
point out a lot of these people fought **for** the Communists in the last
big Afghan war. The whole F-N Country of Afganistan is one huge
rock pile that looks like 50 Years after an atomic war blasted it to
shit. Mix in a couple hundred thousand bearded, horny, camel and
young male homo-butt plugging quasi-religious fanatics and you got
the big picture of what the place is like. A giant sandbox/rockpile
filled with unwashed males badly in need of some poontang or same
or camel sex - doesn't matter 2 them. (ITN news repored
that young male cameramen were propositioned for gay sex

by Northern Alliance soldiers several times during a recent visit)

What a place we got here eh !!??

>
> | Oh, and who are you to say what others are interested in?

Paul. I am asking that we have a choice to read or not to read posts.
Wolfgang is asking to make a choice for everyone. Is that too
difficult for you to grasp Paul? I don't want Wolfgang or you telling
me what I cannot read. OTOH, I am not asking you to read anything. I
am not putting limits or boundaries on what you read. I am not
attempting to interrupt the flow of information and remove what I feel
shouldn't be there. I am only asking that you and the other Wolfgangs
don't tell me what I can or cannot read/post.

Do you read EVERY post in EVERY newsgoup you subscribe to?

Glenn

yes, I have one that works very well with cell & 800 mhz trunking syestems. You could make one for free using a so 232 , I believe, and soldering 5 wires to it. It would be called a 1/4 wave ground plane. The so232 is what you see on the back of your scanner where the coax screws in.

You didn't mention what "not working" entails. I have seen problems with dead audio that stem from bad electrolytic caps on the main circuit board. This problem essentially mutes the radio. Messing with the squelch will not generate noise from the speaker.

I just ordered mine today from Communications Electronics Inc
(www.usascan.com) for $324.95. Seems to be the cheapest price on this
scanner I could find and that price includes a free head set. Grove
wantes $349.95 (and not free headset), seems like Grove likes to charge
people $25.00 higher than other businesses on the same product, this is
the second item I saved $25.00 on by buying elsewhere. Once I get it
I'll be posting my exprience on my website www.MilAirComms.com.

Source record: 56663

A better VHF/UHF listing for SEALORD is on my website at
at http://members.home.net/savmilair1/SEALORD.txt

This list is more or less a group effort from those of us
who currently do or have monitored SEALORD daily in
the past in addition to the published information that
GeorgeF uses.

350.679 is listed as a 3 Xray discrete, monitoring
indicates that this is 350.675 (an apparent misprint
in the DOD material).

For those that aren't familiar, W-157 is divided up into
X-Ray and Yankee areas. They are numbered from North
to South with 1 being off of the Beaufort/Savannah area
and 6/7 being closer to the Jacksonville area. Xray areas
are the western portions and Yankee areas are the eastern
portions. Thus 3 and 4 Xray areas are off the Georgia
coast quite near to my location. These areas yield great
traffic from SC ANG, Shaw AFB, MCAS Beaufort, and
FL ANG. These areas are also used by units visiting the
Savannah CRTC.

311.500 is listed as misselex frequency and a Bristol
frequency. It may be used on occasion for this, but
more often than not it is used for ground controlled
intercepts by Bristol (as listed earlier in GeorgeF's list).

282.800 is a military wide SAR frequency, used just
about everywhere.

Have a good one,
Mac

Sorry to post this, but I need to get this information out.

Tonight while placing out some pages regarding a pursuit in Orange Couty the dispatch system hosed and we lost the subscriber system list.

I had a back up of this system but it dates back to January 2001, and we have lost almost 80 addresses.

If you were on this list and had added your Email/pager address to California after January please re-enter in your address so I can get everyone back in.

First, I did not start the www.MilAirComms.com website to get into a pissing contest about frequencies or who has the best website. So far in a few days I've had over 600 different visitors. Only and "negitive" comments now from two people. The other person to "rag" on me was a person I once looked-up to in regards to MilAir monitoring activites, talk about getting a sad feeling. But when asking this person several questions of which he is an expert on, he never answers the questions but then "blasts" you in other "email Lists" and "newsgroups".

If this site contines be become a Pissing contest, I can take it down, just let me know.

Question Roland, what makes your website better? I never claimed my was better than anyone elses, just that the freqs I list are more corrent than those of many website I've seen (not including yours as I haven't looked at it yet).

I think its is pretty obvious that it is a misprint on the DOD material and have corrected it on the www.MilAirComms.com website. (The miss print can be found on page 7-3 of the FACSFACJAXINST 3000.1D revised 01-May-2001)

>
> 311.500 is listed as misselex frequency and a Bristol

Is this an error in the DOD material again?? In document FACSFACJAXINST 3000.1D it states on page 2-5 that 311.500 is a Bristoal

freq. Then on page 7-3 311.500 is listed as a MISSILEX (along with 270.61MHz).

George
http://www.MilAirComms.com <-HF/UHF Mil Freqs and More * Not in a Pissing Contest, just trying to help other MilAir Listeners who aren't as advanced as others on this group.

Whenever they do that, I always tell them that cell phones are free, from my employer, but I don't care for the biological effects of the RF energy. Now, about the Satellite receiver.....I tell them that I have five of those already.

A guy who can't follow a thread on a newsgroup is calling me clueless, now that is funny. By the way why is it all the pundits with nothing intelligent to ad feel that I must justify why the hell I am buying electrical cable at RS? Guys, because I F#$KING want to. Where is the rule that says you can't buy cable at RS? Like I said in previous post aren't they supposed to be and electrical supply store?. Anyway buying electrical cord at RS is not the point of my message.

Oh and by the way, I am now beginning to understand were it is they get these guys that work at RadioShack. I can see the want ad now "USENET posting a plus" :) I guess working RS would be a step up from "would you like fries with that? Sir." Right Kent or Eamon Skelton.

Off Topic(s) - skip if you already understand Net Present Value.

"MiamiXJ" asked:
> How much can they really make
> selling cellphones and dishes?

Sorry to drift off topic(s)...

Did you notice that those two items mentioned are both associated with "recurring monthly charges". Coincidence ?

Pop Quiz: What is the ballpark ratio between a recurring monthly charge and its equivalent Net Present Value (immediate cash value)?

Answer: It depends upon your chosen interest rate (borrowing or investing), but typically a ratio of *about* 100 times.

Example: That bargain $20 telephone 'Caller ID' box really cost you about $600 NPV in recurring fees (assuming $6 per month, or $72 per year, year after year after year after year after year...). Add taxes and service fee increases over time and NPV could well be closing in on $1000. Yikes !

I'll bet those particular items (Cell Phones, Satellite Dishes) bring more than the usual 3 to 5% commission on the heavily-discounted selling price. You think that they're going to trip over themselves to sell you a $99 Cell Phone for a $5 commission ? It's the contract that you sign that makes them salivate.

Sorry to drift off topic(s) - but it is amazing how many people don't know this stuff.

J. Harvey
Ottawa

PS: Smoke ? Pack a day ? $4 a pack ? $120 per month ? $12,000 NPV !

> in a few days I've had over 600 different visitors. Only and "negitive"
> comments now from two people. The other person to "rag" on me was a
> person I once looked-up to in regards to MilAir monitoring activites,

I'm not trying to be negative, I'm just trying to offer up a
source on SEALORD that comes from monitors closer to
some of the areas that frequency list covers. The list on
my site I consider better because it is 1) a group effort and
2) has info from people closer to the area being monitored
than you are. The list on your site is fairly accurate as I can
see, it just doesn't have some of the frequencies not listed in
the DOD publication that do have activity - and are in the list
on my site.

I wouldn't begin to make comments about anything other
than what I did because I'm not within monitoring range
of the other areas and would have to take to the word of
others.

> Is this an error in the DOD material again?? In document
> FACSFACJAXINST 3000.1D it states on page 2-5 that 311.500 is a Bristoal
> freq. Then on page 7-3 311.500 is listed as a MISSILEX (along with
> 270.61MHz).

I didn't state that you were incorrect here. What I am saying
is that 311.500 is used by BRISTOL for GCA more often than
it is used for missle exercises.

> Question Roland, what makes your website better? I never claimed my was
> better than anyone elses, just that the freqs I list are more corrent
> than those of many website I've seen (not including yours as I haven't
> looked at it yet).

I didn't say my website was better. I said the list on my website was
better. Perhaps I used some improper wording here, I wasn't trying
to indicate anyone's superiority here. Those that know me are fully
aware that I could care less about having my name in the spotlight or
taking credit for anything. I consider the list I have more useful
(hopefully
this is a better choice of words) because I live just onshore from the
Beaufort TACTS range and listen to the activity there on a daily basis,
as do some of those that have contributed to the list.

Feel free to use frequency information from the lists on my site
to update your files or augment your files. I don't consider them
proprietary information as the information has been culled from

personal reports, monitoring experience, documentation, and posts
from email reflectors. The only interest I have is in trying to help
maintain accurate frequency listings - nothing more, nothing less.

Have a good one,
Mac

Yes, I paid $20.00 for shipping but No, I did not pay $13.00 for the
free headset as the total billed to my credit card was only $344.95
(already verified, internet banking is great!).

If purchased via Grove it would have been $349.95 + 7.95 or a grand
total of $357.90 and no free headset (worthless or not, still would have
paid $12.95 more though Grove).

Another big advantage to Mouser or Digikey is their wide selection of products, and no cheap junk parts that only work "sometimes". Even if you only need a simple ceramic cap, they offer it to you from several different manufacturers, none of which are Taiwanese junk.

This sounds like EVERY Radio Shack that I've been in, from California
to Minnesota to Florida...it must be STANDARD training. You're right,
they DON'T know anything about electronics. And what's with asking for
your phone number, I'm sure many clueless sheeple freely give away
their telephone numbers...I always make one up. Then they ask..."Mr.
Jones?"...confirming the number, and I just look at them, in disgust,
and say YEAH! They know damn well it ain't my number at that point.

Then they try to make "feel better" by offering me a FREE GIFT, all I
have to do is plug this cord into my computer, install the software
(yea, right!), and log on to the net...I can just slide the infared
beam acrossed any UPC bar code and it will show the price...WOW!!!
Does this also give out my credit card, SSN, and/or even my REAL phone
number?

I don't buy jack-squat from R/S, unless I really need to.

There is a page that lists some of the minor issues with the scanner (mostly in the service search)
http://members.accessus.net/~090/awh/bc-780xlt.html

But nevertheless, it is definately the best scanner I have ever used. I got mine at the beginning of the year and love it.
Programming is also very easy, which made it nice on several road trips I went on over the summer.

Are you using the copper wire for VHF or UHF? If your are it's kind of a
wast, for
both VHF, UHF and HF (short-wave) put the antennas up in the attic.
string the copper
wire along the inside peak of the roof. Run coax up into your attic and
set up
a ground plain or discone again inside the attic. As long as the old
house DOSE NOT have
aluminize siding, the wood will be transparent for RF work and being
inside the antennas and
feed lines will be out of the weather and last for yearsavoid lighting
strikes. If you put them out side you will have to change out the coax
cable run every 7 to 10 years.
Pound a copper ground rod, 5 feel long, into the yard close to your
foundation. Then
run a copper wire up to your monitoring station,attach it to a copper
grounding terminal
strip. THEN run a smaller grounding wire to ALL of your communications
gear.
Jim

I'm in the market for a new scanner, i currently have a Sportcat 150.
1.Can someone please explain what the advantage to trunk tracking is. It appears to me, that only Uniden has trunking radios (or is it a trademarked name?).
2.Is trunking for cellular? Specs. list Motorolla and Ericson as systems trunking works with.
3.I'm also interested in listening to broadcast AM, FM, and TV(US).
The RadioShack Pro94 looks good at $149, but its not trunking. I would spend as much as $400 on a radio, I'm not sure what i need though.
Thanks for any help.

The advice from George is excellent. That Stridsberg Multicoupler
( tho a little pricy ) is the best choice. The +28 dbm IP3 intercept
point of the device will make a huge improvement in your scanners,
if you live in a metro area. ( in signal cross modulation and overload
characteristics ) If you can find the resources to buy them, you
will be VERY pleased .

What are the technical implications of why Channel 2 TV comes in really crappy??

I hear it's because car ignition systems are in that frequency range.

Somebody please elaborate.. I hate saying that and getting a "huh????" response :)

The Pro 94 and Pro 93 are Dual Trunk tracking scanners (can track 2 systems at the same time) and the 92 is a multi system trunk scanner (more than 2) The 94 has 1000 channels, the 93 has 300 and the 92 has 500. The 94 just does Motorola systems, the 93 does Motorola and EDACS. The 92 does Motorola, EDACS and Johnson systems. The 92 will also decode analog and digital P/L tones.

I thought I'd upgrade from my Pro 26 when I got the Pro 92. Now, I keep it around just because it's full range 25-1300MHz(less cell). My Pro 92 would be the absolute greatest if it was full range.

My most successful squelch of RS droids is still, when one of them says, "Can I help you?" I point to an open piece of floor space, and say,

"Yes. You see that spot over there by the Sprint (insert relevant cell phone brand here) display?"

When he says, "yes," I respond with,

"Go stand over there until my car leaves the parking lot."

Generally applicable. Works every time. And because it's memorable, I don't have to say it more than once. Newbies are clued in right away by the experienced.

## 2542. Already have cell phone

Newsgroup: rec.radio.scanner
Date: 2001-11-20 05:08:25 UTC

Message-ID: <20011120000825.19259.00001465@mb-ch.aol.com>
Source record: 56692

The funny thing is being on a cell phone in Radio Shack
and they still try and sell you a cell phone. I've had
this happen to me on more than I can count. Then after
saying "no" they still try and explain that thier phone is
far better than mine and more time allowed, the battery
lasts longer. Even after all that, they then move on to the
Direct Tv stuff, never mind what I came in for. Also anyone
know why they need all your information for a .99cent
pack of parts? I told them once to ring it up unknown or
as a walkout cash sell, the store manager then jumped
in and said the "computer" won't allow it we need your
name and address to make any sells.
Go figure....

# 2543. Trunking Question on the Pro-90 , will it do ericsson?

I am now experimenting with the Windows Media Encoder program to put my scanner online, I need a bit of help trying to figure out this thing.

How do I find out what the I.P. Address location of my broadcast is. It did show my computer name for my connection with the port, but that didn't seem to work.

Can anyone offer any solutions using this program. If I can find out what or where the location is I can have someone test it out then.

Thanks,

Randy

Not only that, what you don't really hear much is that the
"withdrawal" of the Taliban consists both of fighters moving
out of the territory, as well a large proportion of fighters
changing sides to the Northern Alliance.

Oh... that's all right then...

The king is dead. Long live the king.

I also see fire channels in a city that's nearby but too far to hear.
If you want to hear fire then you need this cocerage is some areas.

The Pro 92 has a little better audio and has CTCSS.
The Pro 93 has the CB band, faster scan speed, and better 800
reception and better trunking options. The Pro 92 is now outdated with
its lousy 800 reception.

I doubt it since it's new and the 245 has been out for years or so it
seems.
>
>What advantages does the 245 have over the 93??
>

Other than they aren't made in China...none!

The Pro 93 is faster scanning
Better Audio
CB band on 93 not 245
93 takes 4 AA batteries not telephone battery packs
GRE receivers over the years have been superior over their Uniden
counterparts. The Pro 93 is the best h/h Trunking radio on the
market.

The $99 Radio Shack Pro 2066 doesn't need an external speaker. So
that tells me that Uniden doesn't give a shit about their product when
they produce their "flagship" radio with the cheapest audio in the
history of any mobile/base radio. The radio also has a 1 second delay
while reading the control channels which makes it slower than hell
compared the the Pro 92/93.

However, it picks up I-call and the others do not. Also, this will
make a fine conventional radio if you don't mind being ripped off by
having to buy an external speaker when this radio cost over $300 and
any other base/mobile blows it away in the audio department.

Not quite true. There is a strange little band centered around 75 MHz
(between US TV channels 4 and 5). There are some aviation beacons
(outer markers [?]) on 75.0 MHz. There is also some paging, railroad,
utility, and other stuff.

Ryan,

The regular section of Police Call would not have carried business band licenses, even though the frequency was used by campus security.

The "Beyond Police Call" section only became a part of PC a few years ago.

The current callsign is WXE-752 ... obtained from the FCC online database.

Jeff Multer
Fort Mill, S.C.

"Ted S." reported:
> The last time I was in a Rat Shack I asked for
> an RFI filter and the twit didn't know what I
> was talking about.

A tale from the Dark Side...

About a million years ago I used to work at RS (I'm only bordering on being a moron, so I've moved on since then). This was well before the invention of Cell Phones and Satellite Dishes so I'm innocent of these latest crimes.

Anyway, this 'know-it-all' type walks in and asks to buy an "adapter". I ask him for further details and he gives me a difficult time and starts acting as if I were an idiot. After a short period of abuse, I walk over to the wall and pull one "adapter" from each inventory section starting with 15- and ending with 278- (about twenty different "adapters") and I bring them back and pile them up on the counter in front of him. He angrily starts poking through the pile but then calms down when he notices that every single package is clearly labelled "ADAPTER".

"Sir, would you like a spray can of 'Flux Off' with that ?"

RS was a pretty good job for a High School / University student - decent pay, interesting toys, flexible hours. Good deals on discontinued items (staff get first crack at them of course). Seemed to work out in the long run...

Long runs of cheap coax will attenuate any signal above 500 MHz. For 800 Mhz best to use a gain antenna on or near the radio and a non-metal framed window.

Hi Harv

At ONE TIME RS used to carry electronics, offered to order from an Allied catalog for you if they didn't stock it, even carried some great products. I still have some Ham paraphanalia from the good old days, the Variac they manufactured under the Micronta name still functions great.

At one time, everything in the shack was either Heathkit, Eico or Micronta(RS). Now it's Kenwood, Yaesu or gasp MFJ.

Probably a lot. And each employee is required to try and sell what ever
corp. mgt wnats them to peddle...and if they sell one the get 'spiffs'
( $5.00 or so.) Also did you know that if you have questions they have
answers? Sadly the answers never match the question!I.E.: Do you still
sell scanner crystals? Yes sir, check over in motorized race car
section. New Radio Shack greeting: DUH?

Probably a lot. And each employee is required to try and sell what ever
corp. mgt wnats them to peddle...and if they sell one the get 'spiffs'
( $5.00 or so.) Also did you know that if you have questions they have
answers? Sadly the answers never match the question!I.E.: Do you still
sell scanner crystals? Yes sir, check over in motorized race car
section. New Radio Shack greeting: DUH?

> with the volume maxed I only get a little tick, tick of the scanning in
> progress......

Hi,

Oh sorry, I've totally forgotten to mention the the described
behaviour only occurs when the sqelch is opened. So try to listen to
the noise when the squelch is opened and the volume is turned down -
there's a noise. Then, when tuned on a station and slowly increasing
the volume, this noise remains constant and the signal slowly rises
above the noise. It isn't that disturbing, but especially when
listening at low volume, the signal-noise-ratio is quite low. A
solution would be to listen at high volumes - then you've got a better
signal-noise-ratio, and then externally lowering the volume again,
taking effect on both the signal and the noise - but there must be
another way to get the Yupi 7100's outputs a bit cleaner.

regards

You used the word "interference" in your title. Their are several sources
of interference on Ch2. Frequently you get what's called "Sporadic E"
propagation. This means that a signal from another Ch2 station hundreds of
miles away can come in stronger than your local Ch2. When this happens,
you will see two images fading in and out on the screen along with synh
bars. Channel 2 being lowest in frequency is most suseptible to this.

Also the second harmonic of the CB band lands on Channel 2.

Finally, the typical TV antenna has less gain on Ch2 than on other
channels. Therefore you get a weaker signal that is more vulnerable
to ignition noise, eggbeater noise, PC noise, etc.

The 780 is a great scanner; I've had mine for about year now. It DOES need an external speaker, and computer control makes programming easier. I use TrunkStar780 ( www.scanstar.com ). If you are new to scanners, however, it will be quite a challenge for you. For the small size, it's quite complex. Other software I'd check out is at www.butel.nl - they do great software there, so I've heard.

Greetings ...
I have a Yupiteru 9000, with mod 3.4 that I'm thinking of selling.
Comes
complete ... soft case, belt clip, antenna, 120vac adapter, 12 v power
cord
and manual.

I have had the unit since 1999 and it has been babied, being used
primarily
at home. I'm selling because I need to free up some cash to buy some
high
end digital photo equipment. I'd like to get $500 but I'm open to
offers.

This unit is the black faced unit with mods, including Discriminator
output
etc., but no descrambler.

If anyone is interested please email me privately, I'm on Oahu, Hawaii
and
offers should include shipping of a flat $22.50 for 2nd day FEDEX air.

Any Offers

Thanks

David

There can be a big differance in the loss in receiving and
transmitting. If the antenna is close to 50 ohms and the transmitter
is close to 50 ohms there will be little additional loss due to the swr
of a 50 ohm coax cable . In many cases , especially for broad
frequeincy ranges , the receive will have an impedance of nowhere near
50 ohms. Even in some very low noise preamps the best noise figure is
when the input is not matched to a 50 ohm line. You seem to forget
that the loss due to swr is neasured from the end where the power is
being sent. In the case of a reciever that is at the antenna end and
the swr is then determined by the input impedance of the receiver which
in many cases is not 50 ohms.

With all the above being said, almost no one with a scanner will notice
the aditional loss of about 1/2 of a db even if the swr goes
to 2 to 1.

How does the scanner crystal thing work? Does it go between the antenna
and the scanner? I have heard that some digital signals can be decoded
via this method. Is this true? Where can you get scanner crystals these
days if Radio Shack is not selling them anymore?

We had a few of them at one place I worked, so I found some software
that would just dump the straight value of the barcode, and used them
to get the tracking numbers off FedEx packages when checking parts in,
and to scan the part number barcodes for inventory.

Beats the hell out of trying to convince the boss to buy us a couple
of regular barcode readers.

Ignition interference would be sporadic--the car is in motion and it is unlikely that a vehicle a block or so away would cause interference. Ignition noise would probably show as "confettii" on the screen. A similar effect could be had by local power line noise resulting from a damaged insulator.

You didn't mention whether the interference was sporadic or continuous, or if the bad signal was a result of a weak signal, i.e. snow on the screen?

Does it occur to anyone that these guys are just paid help, following instructions?
They are told, by tandy (who pays them) that they must ask for the name, address, and phone on each sale.
They are told to push certain products, either by tandy, or by their manager.
Either way, they are just doing their jobs.

Me, I find them handy for odd bits and pieces, when I don't want to wait for a digi-key order.
Maybe I'm blessed, but my local manager is a ham, knows his store, and his limits, and his people do too.

RS has the Pro-94 on sale until 24 Dec at $150 - $100 off normal price,
and $150 off the original $300 price. What do current or previous owners
think of this rig considering the "deep discount" price?

Anyone know what the NJ State Police have for a trunking system?

>The loss in the cable is the same whether receiving or transmitting
In terms of db perhaps, but in terms of power loss, no way, and it is a damn sight more important to impedance match the transmitter to the feed to the antenna then to do the same with the receiver.

Can you received 40 meter signals on a 80 meter half wave dipole with a 75 ohm feed? sure can,lousy antenna, piss poor match, but it does work. Now try transmitting that way, but call the fire department first, someone will have to put out the fire in the coaxial cable soon...

The issue is rarely loss, it is the inability to couple the energy from the transmitter to the antenna. However please explain to me how a 3 db loss on 100 kilowatts is the same as a 3 db loss on 1 picowatt.

On receivers you have something called an AGC, and as a result it makes relatively little difference whether 200 microvolts, 400 microvolts or 4000 microvolts reaches the front end of the receiver.

Since most signals are well above the noise that you are listening for, the loss of even 6 db in the cable has very little impact.

See how long the cable lasts if you lose 6db in feed line to a 10kw transmitter... This mismatch also prevents much of what goes out the transmitter from actually being radiated, so you get whacked on the feedline loss , and you get whacked again at the antenna from the reflected power.

Does anyone know of a source for the nuts used on SO-239 bulkhead
connectors?
I'm adding lines to my window-box, and I'm going to need about 10 nuts.
I hate to buy the whole rig, and toss the barrels, just to get the nuts.

Also, any sources for low cost 9913 jumpers, about 25' with PL259's on the
ends?
(Or low cost source for 9913, for that matter, I have silver/tef Pl259s on
hand.
I'd use LDF4-50, but it's just too hard to work with in the shack. :)

--
Dave's Engineering Page: http://www.dvanhorn.org

Got a need to read Bar codes? http://www.barcodechip.com
Bi-directional read of UPC-A, UPC-E, EAN-8, EAN-13, JAN, and Bookland, with
two or five digit supplemental codes, in an 8 pin chip, with NO external
parts.

# 2615. BC245 Lockout Problems

Why not use LMR-400? Better specs than 9913 and far easier to work
with. I think it's a bit cheaper to. More for less and easy too! :-)

The decibel (dB) is THE way cable loss is measured. Any data sheet on coaxial cable will list the loss in dB per hundred feet at various frequencies. How would you measure cable loss?

>
> Can you received 40 meter signals on a 80 meter half wave dipole with
> a 75 ohm feed? sure can,lousy antenna, piss poor match, but it does
> work. Now try transmitting that way, but call the fire department
> first, someone will have to put out the fire in the coaxial cable
> soon...

When receiving, what matters is signal to noise ratio. At hf, most of the noise is generated by the atmosphere (not like at VHF where most of the noise is generated in the receiver front end). As a result, on hf you can touch a screwdriver to the antenna port and hear a good number of signals. The "S" meter won't move much, but the ratio of "signal" to "noise" will not be much different than if you had a real antenna connected.

By the way, I've worked stations all over the world on 40 meters using an 80-meter dipole. A center fed wire that's 1/2 wavelength long on 80 meters (about 130 feet) will act as "two half waves in phase" on 40 meters. It is not a "lousy" antenna, and in fact has gain compared to a 1/2 wavelength 40 meter dipole.

> However please explain to me how
> a 3 db loss on 100 kilowatts is the same as a 3 db loss on 1 picowatt.

It's the same because in each case, half the power is lost. You seem to be implying that a cable is less lossy when a weak signal is sent through it than when a strong signal is sent through it. Not true.

>
> Since most signals are well above the noise that you are listening
> for, the loss of even 6 db in the cable has very little impact.

If we were only interested in strong signals, we wouldn't have to worry about putting up good antennas or feedlines. You seem to be saying lossy cable isn't a problem. For many of the signals we listen to it isn't. But for the weak ones, it certainly is!

Hmm.. I thought 9913 was the better one.
I'm open minded.
I have to run 25' to the window box, so I want to keep it low loss, as much as practical.
After that, they are LDF4-50 out to the mast.
I also have to come up with some 6' flexi jumpers to get around the rotor, haven't decided on that yet.

Aluminium siding is a common problem that drgrades radio reception. An attic antenna set up
may help. If the triangle side of the roof/attic ends are covered with aluminium then it's
shielding effect will act like a reflector and the only signal getting in will be form
the pitched sides of the front/back roof. Your best reception, will in this case, be an out side antenna installation AWAY from the house.
Another point I neglected is your old wiring up where the short-wave radio and computer are,
an expedient fix would be to run a orange or yellow heavy duty construction 100' extension
cord up to the room to have a center pin ground. The appropriate thing to do is have
a electrical contractor in and have a new 30 amp service installed for that room, and
ask for a price to have the separate copper grounding wire brought up.
If your working short ware a antenna tuner will help peak the signal and if you really
lake gadgets MFJ has ground tuners to help maximize your signal.
<http://www.mfjenterprises.com>
The little two knob random wire antenna tuner MFJ carries works well or build your own,
many radio magazines and ham radios handbook have simple instructions for tuners,all
it takes is like two parts a veritable capacitor and coil with a jumper wire to adjust the
tap points on the coil.
Hope this helps get the hf rig up on the air.
Jim

My guess would be that your problem is the antenna connection iside the radio. My three Uniden Bearcat protables all have this problem
periodically because I'm always. removing one antenna and hooking up another. The nut that holds the BNC connector on top of the radio
comes loose, the connector rotates, and the center wire breaks loose from where it is soldered on the circuit board. It's a simple
process to open the plastic case and re-solder the connection if you're so inclined. Or, you might find a friendly radio or
electronics technician that would be willing to look at it - it's such a simple operation - so you don't have to send it off and pay a
hefty service charge.

Good luck,

Greg

Did you know (at least for corporate stores) the employment application
actually states that RS can fire an employee immediately for any reason
or no reason, and by the same token, the employee may quit with no
notice at any time for no reason or any reason.

This is actually a place I'd consider working, as I like radio, but I
don't want to be a pushy sales droid that must always be on the hook to
keep management happy.

This is true in Texas and perhaps other states. And what else is an
employee for than to "keep management happy."

Welcome to the real world . . .

Nothing unusual about that. Someone is hired to do a job. It's managements job to set the standards of how that job is to be done. If they don't like it, out you go. I assume that you don't have much work experience.

Two bird meters, one at each end of the cable.
If only one meter, measure and move.

Alternately, measure power into a load, then add the suspect cable to the run, and re-measure.

I have a 10' teflon BNC-BNC cable that drops 3dB at 450MHz. If I tried to put 100W through it at 440, it would get noticably warm.

Very common problem.
I wore out two BNCs on my first HT, swapping Duckie to car antenna and back several times a day.
BNCs were never intended to be antenna mounts either. When the connector rocks, as it's allowed to do, the center pin flexes the receptical. After a while, you have a good, but hard to control, variable attenuator.

Ham HTs are switching to SMA connectors, which take the stress off the center pins.
A little more hassle because they are threaded connectors, instead of bayonets.

It's called "at-will" employment, and is gaining ground all over the country. It's a nice way that employers, especially large corporate employers, to get off the hook for canning people for being gay, a union member, muslim, etc. It was part of a package of laws euphemistically known as "right-to-work" (brought to you by the same lexicographers who gave us "trickle-down," "supply-side," and "acceptable collateral damage") enacted in the 80's and early 90's. Common as (acid) rain these days. . .

As late as 1982 or so, the local Radio Shacks where I live (LA) were
full of electronics geeks, computer geeks, and/or hams working for them.

I noticed the change around 1990 or so when I walked into a Radio Shack
and asked for a Zener Diode. The salesperson said "uh..what's that"?

Now, I didn't quite think "The End is Near, Repent U Sinners"....more like
"Toto, I don't think we're in Kansas anymore!"

At least they weren't cellphone pushers with one-track minds back then. Back
in July, I was buying some electronic parts and I remember giving a few of
the salespeople a mini-lecture on exactly just what "resistors" and
"capacitors"
were...

because of shear numbers the middle class must carry the majority of the tax burden. a lot of people make good money in the US; however, many do not know how to save effectively. sadly, many high income earners could only survive a couple of months if laid off. hey, weren't we talking about RatShack :p.

Add to that, a good way to get rid of the lazy shithead leach employees that managed to get hired on that have no intentions to fulfill their end of the bargain and perform work/job assignments. Or are totally incapable of performing the work they said they could do.

Or short the far end, measure Return Loss and divide by 2.

The point is no matter how you do it, loss can be expressed in dB. The
previous poster made a statement that loss expressed in dB was somehow
misleading. It's not.

>
> I have a 10' teflon BNC-BNC cable that drops 3dB at 450MHz. If I tried to
> put 100W through it at 440, it would get noticably warm.

Certainly every cable has some power limitation (particularly the
small teflon type you describe). The original discussion related to 75
ohm RG-6. The statement was made that it was OK for receiving but not
for transmitting. My son runs a 25 Watt 2-meter rig into an antenna
fed with RG-6 with no problem.

I had bought a PRO-94 right when it first hit the market. For turning
it is a GREAT scanner. In fact I liked it so well that I bought another
one (so I didn't have to keep taking one out of the car). I think
this scanner has slightly better audio than most other handhelds I've
owned. GREAT BUY at $150.00

That's standard in TX. IIRC, the only jobs you can't walk away from
at any time, without notice, are certain emergency services positions.

But the rules do work both ways, and a friend of mine exercised her
option to bail out of a job that had turned very ugly, with no warning
to her employer and no consequences -- near or long term -- to her.

Nowhere near? How far from 50 ohms do you think it is? Sounds like
you're saying a receiver is MORE sensitive to SWR than a transmitter.

>
> With all the above being said, almost no one with a scanner will notice
> the aditional loss of about 1/2 of a db even if the swr goes
> to 2 to 1.

And no one with a transmitter will notice any difference with the
1.5:1 VSWR that results from using 75 ohm coax. My son runs his
2-meter transceiver into an antenna fed with RG-6. No problem.

Is it directional? For gain that high on directional antenna it has to have a narrow beam width. That means you have to aim it. How do you aim it at multiple moving aircraft?

>were...

I've found the quality of RS staff varies wildly with location. Some stores seem to have managers who actually care about electronics, others are indeed operated to push the high-margin, big-ticket items. It's hard to blame them too much - they are, after all, in business to make as much money as possible, there's not much margin on a project box and package of capacitors. On the other hand, if they blow me off with bad service on a $5 bunch of parts, I'm sure not going to consider them when I'm in the market for a $200 DSS dish.

Unfortunately it also seems to vary wildly with time. Locations that once had very competent and helpful staffs sometimes go down the tubes, while other locations that were never worth one's time can become very helpful. I suppose it really all comes down to the manager's attitude.
==========
As an 18-year-old Extra Class ham in the late 1970s, I applied for a job at a Milwaukee RS location. Without sales experience they wouldn't even give me an application. Shows where the priorities were (should we be surprised?) 25 years ago, and I doubt they've changed.

Source record: 56500

From the picture it looks to be about 24-36 inches long, a yagi design
using direct feed to a dipole element.
A 9 element yagi for 312 MHz would have a 4 ft boom and a gain of
around 11 dBi or 9 dBd. My opinion is the 18 dB claim, at the least,
needs some explanation.

Cad

btw.....
That's _KMA_ that makes the Rover, not KLM.
Would I recommend the eBay antenna over the KMA? Do you know whose
log periodic antenna the Special Forces uses in (let's just say,
outside the US) ? Well, it's not from eBay and it's not from KLM.

# 2655. Active MilAir Frequencies, Great place for Newbies' to MilAir Monitoring to begin.

Newsgroup: rec.radio.scanner
Date: 2001-11-21 15:09:58 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3BFBC3C6.8080005@licensed4fun.com>
Source record: 56502
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Many people ask the question, "where can I hear some MilAir action?". I've just added to my web site (http://www.MilAirComms.com) lists of FACSFAC frequencies for the East coast (from Florida north through the MidAtlantic States) as well as the West coast and Pearl Harbor.

FACSFAC frequencies are some of the more active frequencies in the MilAir bands. They are the controllers of many of the "Warning areas" along the US coastal waters and Restricted Areas as well as MOA's (Military Operations Areas) near the Coast. What you will hear on these frequencies are Military aircraft flying through these area. Also you'll hear aircraft requesting "Blocks" of airspace from the FACSFAC controller (SEALOAD for Jacksonville Area). Usually if you hear someone request a "Block", next you'll hear them switch to a discrete air-air frequency (also listed on www.MilAirComms.com) then you'll hear an ACM (Air Combat Maneuvering) training mission begin. Many of these ACM missions take place 10,000 - 30,000 feet above the ground making them easy to monitor from 100-200 miles away depending on your antenna. So if you think you don't live near a Military Base or near the coast, plug some of these frequencies in your scanner you might be suprised what you hear.

What I am saying is that if you measure the input impedance of a receiver it will vary all over the place and will probably not be 50 ohms. Remember that the swr for receiving will be measured from the antenna back toward the reciever. That is why the losses can be greater in the coax on receive than on transmitt due to the differance in swr on receive.

After beating the dead horse I think we are still in agreement that unless you need the very last .1 db to work moon bounce or other very weak signal mode , the loss differance is not in the 50 or 70 ohm coax but more in the physical size where bigger is beter.

I got one on sale and over all I've been pleased with it.
Though I recently picked up a new BearCat for my son and when turned on side by side, the bearcat
has much better sound, much more clear signal, less static, less hiss, much easier to hear what is being said.
The bearcat at about 90.00 bucks online.
(it has less features, less memory - but what it can do - it does better)

I've often wondered why we don't use 75 ohms.
The 50 ohm thing was because 50 ohm coax was cheap after WW2.

Now, 75 ohm, especially hardline, is dirt cheap, and IIRC, most antenna designs can be set up for 75 ohms easily.

--
Dave's Engineering Page: http://www.dvanhorn.org

Got a need to read Bar codes? http://www.barcodechip.com
Bi-directional read of UPC-A, UPC-E, EAN-8, EAN-13, JAN, and Bookland, with two or five digit supplemental codes, in an 8 pin chip, with NO external parts.

I'll drink to that. Interestingly, for a given diameter and dielectric, 75 ohm cable will have a lower loss than 50 ohm.

I know a serious weak signal (i.e, cw/ssb) vhf/uhf ham (and rf engineer) who uses nothing but 75 ohm 3/4 inch CATV hardline for all his antennas. And he does no external impedance matching!

Same thing.... With the volume down, the noise level doesn't change a bit with the squelch open or closed, signal or no signal. Just a *barely* noticeable hiss. Naturally as the volume is brought up you hear ambient noise, signal, whatever... An old economical standby to clean up the signal from anything, even my AR5000, is a Autek QF-1A filter. Not practical when portable, but works great on base (not used for this experiment, however). I've got a Timewave DSP enroute for the AR, so the Yupi will have the Autek on a permanent basis now. You may have a abnormally noisy audio amp and/or the hearing of a German Shepherd. (;->))

If there is any differance in the losses in the sma and bnc it will be
so small as to be unnoticed. Sort of like adding a small rock to a
truck load. There will be a differance but who can tell.

He probably thinks ( and probably correctly) that he will loose more in matching the stuff to 50 ohms than the mismatch will cause. Also the antenna system may be designed for a 70 ohm feed or he may have the correct number of wavelengths so the impedance repeate its self in the shack. That is easy to do for a small range of frequencies but not usually possiable with a broad range such as most scanners are made to cover. With catv hardline being free in some cases and the 50 ohm storebought stuff over $ 3 a foot and connectors around $ 70 each he can always add another antenna or two to make up for small freaction of a db he might loose in the 50 vers 70 ohm aditional loss due to swr.

# 2675. Radio for Ski Patrol use

Newsgroup: rec.radio.scanner
Date: 2001-11-21 19:30:37 UTC
From: maximusnt@hotmail.com
Message-ID: <9ade9c43.0111211130.1c8f3cf7@posting.google.com>

Guys, I'm not sure if this is the right forum, but I'll pose this to you as a newbie. I work with the ski patrol in Canada, and will be travelling around to different hills this year. I'd like to have a personal radio, with an earpiece that will work at all the hills. Is there a radio that will fit the bill in terms of working on multiple frequencies, so that I can scan to a new channel at different hills. I obviously also need receive and transmit, so it's not technically a scanner. Anyways, I'd love some help, because I'm really out of my depth here. Thanks a lot,

Neil

SMA is probably better at UHF and above, for VHF and below I doubt you could tell the difference.
Of course that would be assuming both connectors are new and perfect.
A year old SMA is going to be definitely better than a year old BNC that's seen the same use.
My HT is three now, and the female SMA looks like new.

Motorola has a vast array of two-ways with various features, I got a
tad lost surfing their site :)

I'm thinking maybe something like this is what you're looking for...
fairly small & rugged, channel scanning capability, and ergo designed
so can be operated with gloves-on

http://www.motorola.com/cgiss/portables/ct250.shtml

and with a few more features

http://www.motorola.com/cgiss/portables/ct450.shtml

# 2679. Itinerant frequencies

Newsgroup: rec.radio.scanner
Date: 2001-11-21 20:24:47 UTC
From: Dave VanHorn <dvanhorn@cedar.net>
Message-ID: <j4UK7.165530$My2.97706562@news1.mntp1.il.home.com>
Source record: 56527

I've just recently gotten active in this, and I thought I'd start with the local trunking system, plus the itinerant frequencies. So, I have one scanner on the trunked system, and the other running the itinerants.

What I didn't expect, is to hear my local EMS dispatch on itinerant frequencies
This seems rather counter to the intent of the allocation.
Is this normal?

I thought I had some odd harmonics from the local FM station, but it turned out to be images.
They are VERY close to me, coming in at S9+40 with 30db attenuation in the line.
I added a notch filter that is quite effective, just an open-ended stub of 9913 tuned to the station's freq (104.1)
This is in the feed before the preamp/splitter, so all the receivers are getting the filtered signal.

I don't believe that these two issues are related, if the EMS is an intermod product, then their real signals would have to be at about 250 MHz, and I rather doubt that.

After 13 years as a computer consultant in California I moved to
Washington and at the same time decided to get into sales where the
big money is. I got a job as a Xerox copier salesman. I received 6
weeks of very high end training and was then a salesman in my own
territory working for the authorized Xerox agency in town. I am a very
honest person and never lied to clients when I was a consultant.
Well, I quit after 6 months and got a job as a computer analyst.

Here is what I learned from that experience about sales to the public.

1) most customers are for the most part foolish and want to get the
lowest price even if it means getting lied to and ripped off.

2) most salespeople, lie, cheat and do whatever they can to get a
sale.

3) most companies support the practices in #2

4) It is hard for an honest person to sell against a low life because
people hear what they want to hear and would rather get screwed later
and pay less up front.

After this experience I will almost never believe what a salesman
tells me for the rest of my life. Cars, electronics, real estate,
health clubs,you name it, the world is full of dishonest liars. I have
seen the truth, but for someone who has not been where I have been
recently the truth is hard to understand.

You're joking, right? If it were not for this law it would be practically impossible to fire people for not doing their job. BTW: The trickle down theory of economics has been verified by far smarter economists that I. And to think...I wanted to be a lawyer...but then I would have to defend lazy people who were fired for "no good reason".

Sorry, but "trickle down" is a fraud. Airtight proof below.

Ask any qualified economist what percentage of his economy is
driven by consumer spending. He or she will come up with
something around 2/3. Certainly the majority of it.

Then ask him what percentage of that 2/3 is contributed
by luxury item purchases vs. necessities that "ordinary"
folks in the middle and lower-middle class buy, and I'd
be willing to bet a dinner at Four Seasons the bulk of it
that our economy runs more on sales of economy cars
and bread than Mercedes, luxury cruises, and caviar.

Now take the vast numbers of consumers who are
middle class or below (and all of whom need to eat,
consume consumer products, etc.) and contrast that with
the perhaps 5% rich whose basic consumer needs are in practice
that much higher. The average "middle class car" is what, $20,000.
The average "rich person's car is not, on average, the 20 times
higher or $400,000 it would take for his contribution to even
reach half that of the 20 average folks he's above on the
economic ladder.)

P.S.: The 1960's provide solid proof of my assertion. They were
the greatest sustained period of economic growth in real terms
this century, AND one of the highest standards of living in
American history. One breadwinner could support a family, own his
own house, and work around 40 hours a week to do all this.
This hasn't been possible for most middle-class folks for over
20 years.

SO QED. "Trickle down" is a self-serving crock, that has
no basis in reality except that it makes a certain kind of
greedy rich person feel virtuous when no such feeling is
actually justified.

Radio Shack is kind of like K-Mart and Sears... be "trendy" just enough to get by, but rely on the trademark to sell your products and don't change much else. I'm sure Radio Shack will be operating in one form or another under the same name 50 years from now.

Nowadays $1 packs of diodes and resistors don't keep them in business. That's OK for the 99% of their customers who don't even know what a resistor is, but bad for us 1% who think this is a handy resource. Shelf space is a valuable commodity and if a product (or anything else) doesn't carry its weight, then today's business environment dictates that it should be dropped fast!

RS employees work for minimum wage and 10% to 20% commission. If you worked under these conditions, wouldn't you lay on the hard sell to everyone that walked in the door? Be very pushy and sell enough cellphones and a person could make a very decent living doing this...

duuuuuuuuuuuude ........

don't let it bother you too much .." they " have been able to track
your cellfone via satcom for a LONG time now ... all cellfones have
had " unique " identities that can be sat tracked, ( ESNs /NSNs )
from the very beginning. The so called " sat chip " technology
will just allow some civilian based ( ie: non NIA/ NSA military )
tracking now too. These IDs are very conveniently " piped "
on the intra tower and command ( tower to cellfone ) digital
links ( even when when the phone is just registered < turned on >
and not even in use ) and are easily found and monitored by
satellites. ( or YOU too, if you wanted ..illegal in the USA ...
an OKI -900 and C-tek is all it takes for analog / gsm / tri-mode )
The way the current system works ... makes it unnecessary
for sats to actually " hear " the individual phone , to find them
...at least. The " chips " will make finding the " actual " origin of
the phone signal much easier , now. ( that's all ) Just makes your
private collection of those pre EE2 analog / GSM cellfones .. " THAT "
much more useful and valuable. ( since they can be spoofed for ID and
have NO locator chips ) Doncha wish you had 150 lbs of those puppies
in a box in the basement ...?? ah ha h ah ah h ah ha ah ah ah a

The only complaint I have about the 780 vs. the RS 2067 is that the 780 takes its sweet time in Tone Search, whereas the 2067 can sniff a PL in a millisecond when you are monitoring. Just takes the 780 a little longer to find the PL.

I've been amazed at this whole thread. I never realized that you
couldn't be fired, or fire the job simply because either party thought
the other wasn't worth messing with. Sounds like 'modified welfare'.

Are you asking for an 800 MHz scanner that is unblocked and will receive cellular or are you looking for a 800 MHz scanner that receives all the Trunking channels? Most all Trunking scanners receive all the 800 MHz frequencies that are used for trunking.

It does work both ways, but don't look for a great reference from your (former)
employer if you exit in the middle of a key project!

--

I'm as irritated as the next person with lousy service, lazy attitudes, and
poorly-trained employees that seem rampant in retail. However the saying,
"you get (no more than and probably less than) what you pay for" applies to
employees too. If you pay less than a living wage (which varies from area to area a
lot), you're going to get people who are too dumb, lazy, or otherwise unfit to get
a "real" job. The ones with reasonable ability, drive, or skill aren't going to
settle for a minimum-wage job except maybe as a supplemental income for school or
for flexible time reasons.

Thus, as the cost-cutting trends continue, it's not just the quality of the
merchandise that suffers....

Will consumers eventually start voting with their dollars in favor of some quality
service alternatives, or will the bottom line eventually cause us
all to shop in automated warehouses full of vending machines, as another poster
noted?

Yes, but you're not an average consumer. If you actually insist on
seeing the return/repair policy in writing before you pay for it,
you're really not an average consumer.

## 2698. Trunking problem

Newsgroup: rec.radio.scanner
Date: 2001-11-22 02:09:35 UTC
From: foghat9@attglobal.net
Message-ID: <3BFC5E5F.A607E3C6@attglobal.net>
Source record: 56455

I have a Pro 91 set up for trunk tracking, or so I thought. I've programmed in all of the frequencies, including the ones for data channels. But when I switch from regular scanning to trunk scanning all I get is the id's flashing but no sound. The scanner shows the proper id for dispatch, car-to-car, etc, but no sound. I've tried 3 different antennas all with the same results. Why is this happening? I can hear the calls on the regular scans.

Well, back in the stone age, you could be fired for any reason. With
the rise of union power came the 40 hour week and all sorts of other
niceties, among them that you had to have cause to be fired, and, I
believe, you had to be put on some sort of probationary period so you
could see it coming. At will employment removes those restrictions
on the employer, but also removes the restrictions on the employee to
give two weeks' notice.

> The $99 Radio Shack Pro 2066 doesn't need an external speaker. So

Having a 780, 2066, and Pro-92, let me add this. If you live
in an area where agencies use a lot of cross-patched, etc.
talkgroups, the 2066 is disadvantaged by not having the
status bit function. As a result, you have to program in both
the regular talkgroup and the cross patch group, which
reduces the number of channels you can program into the rig.

BTW, I do like the audio on my 2066. I used to run it in
my truck with no external speaker. (The truck had no
a/c and I could still hear the radio fine with the windows
down.)

> >bad.
> I just ordered mine today from Communications Electronics Inc
> I'll be posting my exprience on my website www.MilAirComms.com.

Michael, George -

I think you'll both enjoy the 780. I have one installed
in my car (and was in the truck I owned previously)
and in the house. I only have two issues with the 780,
both of which are most noticeable in a mobile situation:

1) Poor audio. An external speaker is definitely a must.
The truck I used to own had no a/c and I HAD to use
an external speaker for the radio to be heard. I use an
MFJ speaker that costs about $10 and it does the job
just fine.

2) Intermod. The 780 for some reason is quite susceptible
to intermod in the UHF range. This can be balanced by
programming in the PL tones used on the freq, however.
I have found the intermod to be a problem in both the
460mhz land mobile and 400mhz Fed bands.

One particular feature I've found useful on the radio that
I don't see too many folks mention is the mute button.
I run multiple radios in my car and the mute button is
a pretty neat feature when I want to concentrate on one
particular radio or carry on a conversation without a lot
of background audio.

Source record: 56460

I'm hoping someone can hep me figure out why the first column (from the left) of keys on one of my 2006's is not working. I acquired the rig after the passing of a fellow scanning enthusiest and there were some issues with the MANUAL button not working properly. I disassembled the rig and cleaned everything up. After allowing everything that had been washed (the rubber keypad and knobs) to dry completely, I reassembled the rig. Everything seemed to work normally and the MANUAL button was working a bit better. However, after sitting on the shelf for a month or so, the problem has returned and is now actually worse.

Any ideas? I'm sure this isn't the first 2006 with a keypad problem!

True, but in that sort of cast it usually won't happen,
anyway. Besides, negative references can bring on
lawsuits, so aren't given that often. Some of my
past employers won't give references, only confirmation
of employment, because they're lawsuit-gunshy.

In my occupation (machinist) it is standard practice not to give notice. If you are starting a new job on Monday, you tell your present employer on Friday. It does work both ways though. Layoffs are fairly common. You are generally told at the end of your last day. Sometimes you show up to work and are told to go home.

Very true. I live in the country on a big hill & I don't miss musch. I'm
hearing comms from 30 - 40 miles away. The cool thing is cost. I didn't have
to spend alot of money to hook up multiple radios.

# 2718. Reducing electrical interference between radios

Newsgroup: rec.radio.scanner
Date: 2001-11-22 11:26:06 UTC
From: tremors834@aol.com
Message-ID: <20011122062606.04384.00001978@mb-fc.aol.com>
Source record: 56468

Hi.
I'm wondering if any people take any special actions to reduce electrical interference between their radios and/or computer. I see pictures on the web of peoples shacks and see radios stacked one upon another. Stacked next to computers, etc. If I just stack my 2 base scanners on top of each other alone they get all whacky with interference when they are both on at the same time. One scanner will cause what almost seems as birdies in the other scanner and vice-versa.
My current 2 base scaners are a Pro-2006 and a Pro-2050. With that said I should also point out that currently I am not using an outside antenna (although I will be soon)..I'm just using the top screw in antenne for each scanner. I'm thinking maybe the screw in antenne are just too close to each other when stacking the radios?
Any insight or just general info towards reducing electrical interference would be helpful.
Thanks, Gene

And how does it have 18 dB of forward gain and still have "good
omni-directional capabilities?" Looks kinda funky too.

Please explain how an antenna can have 18 dB of forward gain and still provide "good omni-directional capabilities." This would seem to violate the laws of physics.

Also, how did you measure the 18 dB gain? Do you have an antenna range? What is the 3dB beamwidth of the main lobe?

Art Harris

> 42.24 - State Police - F-8 (Highway Enforcement)
> 42.22 - State Police - F-15 (Investigations)

Connecticut State Police now use a 100% 800 MHz digital trunked
statewide system. Those 42 MHz freq's will be quiet indeed. <G>

In New Haven, try the following:

Police:
460.100
460.150 (NH area hotline)
460.450
460.500
460.525 Yale University PD (real cops, not security guards <G>)

Fire:
851.0125
851.3125

I doubt any of them will be quiet, but that's where you'll hear what
you're looking for.

Happy Thanksgiving,
Barry

That 460.150 freq has been abandoned as a hotline. It is now more like a multitown tac freq. It is used during The Pilot Pen tennis, by narc officers and by Auto-theft task force, to name a few.

Not sure of this antenna but I've seen what is essentionally a yagi and vert
combined. Good gain in one direction and 1 db gain omni. It is far better
to use two antennas and a switch!

I just picked one up. I wanted a good triple conversion scanner. I do not have any trunking around where I live but I can tell you that using it as a conventional scanner it has been the best combination of sensitivity, selectivity an clarity without any intermod or overload on the frequencies I listen to.
There are some utility comapnies and local city (non police/fire) frequencies that are trunked and I plan to try some of those as soon as I figure what system they are on and how to program them.
I have owned them all, the 200X series, the higher end Unidens 895, 9000 etc. AOR 8600, Yaesu VR 5000 and many hand helds from The Shack, Uniden, AOR. Yupi, Icom Yaesu etc. For my location and the frequencies I listen to the most the 2053 has been the best of the lot.

It always amazes me, someone should do a study on Radio Shack. I complain just as much as the next person, but everytime I go in to buy a PL259 (BTW they have silver now, but no ceramic) connector there are people there buying scanners, TV's DVD's and yes cell phones, lots of them. I have never seen a RS go out of business. Some of them do actually have knowledgeable people, but not a lot. It seems everyoine hates going in, myself included, but I probably spend a considerable amount a year there, it is just convienant and easy. I admit I own RS HT's, the new and old, RS shortwave receivers, DX300 and some portables, RS Mobile 2m's, a scanner and assorted other items, almost all purchased as closeout or good sale. BTW, I was able to get a schematic and service manual from them for my DX300, and they replaced my HTX202 when I fell in the bay and wetted it. With all their pain, they seem successful, with the exception of incredible universe fiasco.

I guess part of it is my priorities change, time is now more valuable, so quick is better and worth the pain.

Without a doubt, RS is directionless. I still own some stock and its going to be sold soon. The quality is low and the prices are high. That RCA junk that they sell now is crap. bought two items in the past year and a half, and both had to be repaired. The DVD player broke for a second time so I junked it. Cost more to repair. Without parts there will just be no reason to go there anymore. I suspect RS will be gone from the scene in about five years. Anybody want to make a bet on that?

I have a Yupi MVT-7100 and I think it's a great piece of kit, the only thing that bugs me about it is the large number of birdies it seems to have. Does anyone know of any screening mods (or anything else) that can be done to it to reduce the pickup of internally generated noise? Thanks.

Ricky

Well, you can clone sheep to sheep, or dogs to dogs, but not sheep to dogs.

Likewise, you can clone 92s to 92s, and 93s to 93s, but not 92s to 93s.

How could one expect to clone 500 channels to 300 channels?

How could one expect to clone LTR channels to a radio that doesn't receive LTR?

Guees you need a pencil and a piece of paper, a lot of time, and do it the old fashioned way!

I live right outside the city of St .Louis Mo.
I'm new to Trunking and I need to know what Trunking system to select for St. Louis

The Pro-2052 Setup allows me to select one of these. . . .
E1 Motorola Type I, 800 MHz frequencies
Ed EDACS frequencies
E2 - UHF Motorola Type II, UHF frequencies
E2 - Hi Motorola Type II, VHF frequencies
E2 - 800 Motorola Type II, 800 MHz frequencies
E2 - 900 Motorola Type II, 900 MHz frequencies

I know that St. Louis uses Motorola type (II i ) ---------whats the ( i ) for ?? and witch one do I select?

St. Louis Trunking Freq's are in between 856.4375 up too 860.7125. . . .
Thanks Jon Ludwick
Happy, Happy!!!!!

Source record: 56401

Hello,

If there is anyone in my area (of Pinellas County) with a BC780 that is willing to clone my radio from theirs, or assist me in loading in the file i sure would appreciate it. I'm new to trunking radios, and programming with excell. I've been having a pretty rough time with it, and i'm kind of at my wits end.

I would be happy to give you a good base scanner antenna for your time assisting me. It is a good one to. I bought 2 and am using one now. i also have an old base scanner you can have also.

In Canada. AS most everyone knows. You may listen to almost any frequency you want. But once you divulge what you hear. Then it is illegal. There is not that many Cells on analog anymore either. Most Pay As You Go ones that used to be analog are now digital.

Actually, I believe the government also takes far more as a percentage of
the GDP than it did back in the 60s. I seem to recall running the numbers
a year or two ago and coming to the conclusion that if we simply took Jimmy
Carter's last budget, and adjusted it for population growth and the rate of
inflation, the government would be spending something like $400B *less*
than even the allegedly conservative (on spending) Republicans want.

I'd like to see somebody ask a politician what it is that consistently
makes the per-capita cost of government increase faster than the rate of
inflation when this happens in virtually no other sector of the economy.

> an earpiece that will work at all the hills.

A scanner will allow you to receive Patrol frequencies at probably all of the hills, assuming that the scanner is capable enough. Some areas in Colorado use VHF, some UHF, and some trunked 800 MHz. Not all scanners will receive all bands, or be capable of trunk-tracking (listening to only the ski patrol, for example, instead of hearing all traffic on the system such as janitorial, parking shuttles, etc).

> Is there a radio that will fit the bill in terms of working on
> multiple frequencies, so that I can scan to a new channel at
> different hills. I obviously also need receive and transmit, so it's
> not technically a scanner.

I suggest that you do an internet (google, altavista, etc) search looking for frequencies used by the hills you plan to visit. You may find that they're all in the same basic frequency range. If so, you may be able to buy a radio which covers all hills of interest to you. I suggest rec.radio.swap or www.ebay.com.

If they're not in the same basic range, you may need to borrow a radio at each hill or ski with a local patroller.

I'm fortunate: my fire department and my ski area are both in the VHF band, so my personal 2-way radio is compatible with both.

Ski safe!

Do you have the two radio scanners PRO-92 and PRO-93 BOTH set up
the same way? Try them side by side, programmed exactly the same, with
say two or three trunking systems and 25 to 50 conventional frequencies,
all in the same order and if you know the PL/DPL tone codes for them
engaged this feature on the PRO-92. Now see how the two radios follow
each other What your looking for in this little endeavor is to see
which radio misses calls, drops calls/talkgroups and with the
CTCSS/Digital tone squelch working on the PRO-92, see if the PRO-93
misses calls when hung up on unwanted communications that are bypassed
with the PRO-92's tone coded squelch. Even with PL/DPL the scan rate of
the two radios should render some interesting results.
A site to visit is <http://www.pro-92.com> they support both
radios and have software with files supporting frequencies of different
regions of the country.

each
> other when stacking the radios?

That could be a major factor. With close spacing, any local oscillator signals leaking from one scanner will be picked up by the other scanner's antenna. Everytime you halve the distance between a signal source and a receiving antenna, the signal will increase by a factor of four (6 dB). Conversely, everytime you double the distance between a signal source and a receiving antenna, the signal will decrease by a factor of four.

Solution: move the scanners further apart or, better yet use an outdoor antenna with well shielded cable. Same goes for computer noise.

Art Harris N2AH

When two antennas are close together, there is very little "path loss" between them. Eveytime you double the distance between the antennas, you quadruple the path loss.

I have a Pro 94a and it IS a great scanner... but I'm thinking of
taking it back and waiting for the Pro 93 to go on sale.

Ok I need some opions on Mobile Scanner Antennas. Want to get
something better than I have now (RadioShack Thru-Glass Scanner Antenna
which looks like a cell phone ant). Primary interest in coverage would
be MilAir. I have no interest in 800MHz.
Thanks
George

That's what I noticed. There seemed to be absolutely NO traffic in that low band range. It seems they have moved to 460MHz and 800MHz.

> Town to town
> still uses 45.860 for chases, wants, etc.

I did pick up that one and suspected it was some form of tactical FQ.

> but many towns rely on the phone
> or collect system so it is far from complete.

I spoke to a state Trooper who told me they are using 800MHz now(possibly trunked). I wonder how long ago they mage this switch?

I captured a whole bunch of frequencies, and while post them for who wants them. I didn't have enough time to identify them, but most of it sounds like PD/MED/Train. I may have picked up some businesses also. I heard some guy try to commit suicide on Thanksgiving Evening . . . sad.

Here is a list of the VHF maritime channels.
http://www.marinewaypoints.com/learn/vhf.shtml

You should be able to hear some good stuff. You'll definately hear the Coast Guard, even on your rubber duckie antenna. The USCG seem to have a kick butt signal. If you have an external antenna and have a clear shot to the ocean (Florida is fairly flat, so I assume you'll have good reception) you should be able to hear the boats as well. I am 15 miles from the Pacific, and unfortunately I live in a valley, so I am not able to hear all the boating traffic on VHF.

Why are Americans so stupid?

weeeellll...going back to the topic of EDUCATED americans being stupid...that's
just cos american universities
will admit and graduate virtually anyone with the cash to pay for credits. no
more standards for them. and if
you say it ain't so, just take a look at the ivy-league eejit who's the
president at the mo.
of course, there is an up-side to all of this. as the americans have been
dumbed-down so, it makes us
immigrants look all that much superior.

Ps, keep your canadian comments to yourself. Ignorant idiot

I've done some homework on the 93... there are some problems with the
first release of this product. I would expect RS would fix these
problems under their warranty, but am hoping to get a clarification.
It's quite possible that they will not, however and I will end up
keeping the 94.

The RS Window Mount was the worst piece of junk
I ever used for mil-UHF! A rubber duck outperformed
it when I was doing some on-scene monitoring in the
Moody 1 MOA a few years ago. I have used 220mhz
ham quarter waves, an Antenna Specialists NMO mount,
the RS mag mount, and a Diamond SG7200NMO.

The best one of the bunch surprisingly was the SG7200NMO!
I was surprised that it performed as well as it did considering
it's an antenna tuned for the 2m/70cm ham bands. The only
drawback to the SG7200 is that it has poor lowband reception.
The 220mhz quarter wave and the Antenna Specialists I would
consider tied for second, and the RS Mag Mount third.

USCG Stations and Groups usually have several transmitter/receiver
sites that they can use individually or as a group, which gives them
a good signal all through their area. There is a section of the USCG
Navcen website that plots out tx/rx sites for the USCG Groups and also
gives the coverage areas for them. It's a pretty good resource - I printed
out the one for Group Charleston and Group Mayport - the two groups
I can monitor. Just scroll down thru the following URL and find the
group closest to where you live:

http://www.navcen.uscg.gov/marcomms/cgcomms/nds.htm

In article <20011123203937.11012.00001321@mb-cn.aol.com>,
fcathell@aol.com says...
> My MVT-9000 when in SSB mode is 200Hz off the true frequency. This error is
> the same when in either USB or LSB (the zero beat is about 200Hz in the same
> direction away from the true freq.) Any recommendations on how to easily
> correct this? Please E-mail me if you have any experience with this rig.
>
> Thanks,
>
> Frank
> Frank
>

Well, 200HZ isn't all that much, it isn't worth worrying about, IMO.
Mine is about a hundred, a friend's is 350. Neither of us is too upset
about it. It would cost more to fix than it's worth, since it doesn't
hurt anything.

Source record: 56442

All I can find on this model makes it sound like the ultimate radio.
One HUGE problem. The US models have a huge gap in the 800 MHz range.
I want to listen to my local RTA in in the 850 MHz range...:) So I
guess I have to shell out the extra (gulp) fundage for an unblocked
model, don't I?

Sigh.

Has Icom fixxed this "feature" yet? Is it posable to download and
clone from a nonblocked model? Thanks.

I have used the "Hustler" hole mount on my vehicles for over 15 years. I like the performance, I have never been disappointed. We use them on our police and fire units also on VHF high/low and UHF bands. I use the hustler mag mount on the scanner at Emergency Management Agency Command Post and it also performs very well. This hustler is center loaded, it's about 25" tall and from my experience it can be retro fitted in many ways.

Good luck in your search and "God Bless America"

Trying to find the SG7200 but can't find it listed anywhere. In the
AES catalog the only 220MHz Diamond mobile antenna is the CR320A which
is a 2M, 1 1/4M, and 70cm antenna (3.8 dB Gain on 1 1/4m). Has the
SG7200 been discontinued?

People who spend time in news group bashing others
can't have much of a live (i. e. 48 years old, fat, bald, lives
with mother, etc.). The only "power" they have in their lives
is the feeling of "superiority" they get by criticizing others.
They 'live" through other people's responses to their posts.

So don't give them the pleasure of a response. Simply filter
them out with your news reader and "ignore them to death".

# 2798. FS. Pro-76 Handheld Scanner

# 2809. Wireless Headset Communicators at Football Game

Newsgroup: rec.radio.scanner
Date: 2001-11-24 22:46:20 UTC
From: "Al, N2NKB"
Message-ID: <0rVL7.195553$3d2.8148319@bgtnsc06-news.ops.worldnet.att.net>
Source record: 56360

On Thanksgiving, I was able to tune in to the coaches headset's during my son's HS football game.
They were on the 900 MHz cordless phone band. Big fun, by the way. My fellow fans loved to hear "the future".

I noted that at least one set was always transmitting during the whole game. And there was no doubling between the three sets. Anybody know how these work?

My guess is that they can be set up as master/slave, the master always transmits, and when a
slave either pushes a talk switch, or a voice activated switch turns on the slave carrier, the master
automatically stops transmitting. Note that I did hear an very short periodic low level clicking sound every
500 mS or
so, switching data? It could have been external interference, I'm not sure.

Al

It's quite possible that it has. I've had mine for about 4 years or
so. It has a "pigtail" coil about 1/4 of the way up, an enclosed
coil about 1/3 of the way up and an enclosed coil about 2/3 of
the way up. If they have it's a shame! It may be a good idea to
keep an eye on the hamfests....

Currently I have a DJX-10XE scanner and looking at upgrading to the DJX2000E one, is there any great benefit in doing so, It would appear that the only great thing that has changed is the freq. counter and 800 more stored channels also have they improved the scanning speed and they made it more sensitive?

Thanks,

After checking a few other online Ham Radio mailorder houses as well as
Diamonds own website it looks like the 7200 no longer is available.
I'll look for another 220 antenna and give it a try. Anything has to
be better than the RadioShack "thru glass" antenna.

Should try to buy from them and use a foreign address. It stuffs the computer, I have a 4 digit zip and 3 letter state and it rejects it every time. They give up and process it without. When I'm in the USA, shopping from RS is frustrating.
p.s. They are no different here either.

Not sure which model you were observing. Most of the good ones
(Telex, Motorola) are full dupex (multiple frequencies) and most are
secure. Given it was a high school game, perhaps they are using
something less expensive I'm not familiar with.

AMATEUR RADIO NEWSLINE(tm) REPORT #1267 – NOV. 23, 2001

Amateur Radio Newsline report number 1267 with a release date of
Friday, November 23rd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Six meters suprises the world and the night of the meteors are first on this weeks Amateur Radio Newsline report number 1267 coming your way right now.

(Billboard Cart Here)

**

THE BIG 6 METER OPENING

--
Cold Open Audio Here: N6KNW working Japan on 6 meters
--

That’s Brad Marckwardt, N6KNW, in Santa Clarita California working Japan on Saturday November 17th. No big deal you say? Well the band was 6 meters. It was the wrong time of the year for this kind of D-X. And less we forget, while Brad was working Japan, other hams were making equally amazing 6 meter D-X contacts like California to New York and Alaska to the lower 48. Take a listen:

--
Audio Here: Alaska to California, New York to California
--

The 6 meter DX was not limited to North America. Reports came in from around the world of similar single, double and even triple hop F 2 contacts.

From Costa Rica, Carlos Diez, TI5KD, reports that he started out the day working Europeans including GW4VEQ at about 13:50 UTC. Ten hours later, at 23:05 UTC Carlos crossed the Pacific with his signal, contacting JA4MBM for his first ever Costa Rica to Japan short path QSO.

The experts say that that the current solar cycle peaked in 2000 and that we are on the downside. But it appears that someone forgot to tell the VHF and UHF bands that its not time for D-X. It simply keeps rolling in on 6 meters and above and seems to get better and better with each opening.

Our thanks to Dave Booth, KC6WFS, who took time out from working some of the DX to make the recordings you heard in this report. And less we forget, the six meter band is still opening up almost every day – at least as this newscast is being prepared. (ARNewsline (tm))

**

THE ROCKS IN THE SKY: THE LEONID METEORS AND HAM RADIO

As if the 6 meter opening were not enough to bring bragging rights to many V-H-F enthusiasts, a few hours later came the light show in the sky. It was the Leonid Meteor Shower and hams who enjoy bouncing their signals off the ionized trails of meteors were not disappointed. One of them was Joe Hannigan. WL7M in Fritz Creek Alaska heard commenting during another 6 meter F2 opening:

--
Sound here
--

We do not have any of the sounds of the contacts. Much of it is high speed C-W or computerized using WSJT. But we do have some reports courtesy of the VHF Reflector.

Lets start with Sam Horton, KD4ESV of Bradenton Florida. He says that he was operating from grid square E L 87. Horton says that by 18:23 UTC he had worked twelve states including Alaska.

But that’s not all. Tim Marek, K7XC, of Fallon Nevada, operating as a Rover from grid square DM09 had one of the best meteor scatter reports. We don’t have time to cover it all, but here are a few stations that he worked starting with KB5XC in DM65, then AA7A in Arizona, K7MI in grid CN73 and W7USB in DN17. Tim added that W1IPL in grid DN62 went in the log along with K5JL in EM15 at about 03:23 AM local time.

K7XC says that all of these contacts were made mobile on 2 meters. Marek used an Icom IC 706 Mark 2 G transceiver driving a 170 watt power amplifier into a yagi antenna on his rover vehicle. Marek says that he spent the entire night chasing QSO’s on the space borne rocks. He wrote his report at about 6 a-m local time adding that he intended to crawl into bed and planned to sleep till noon. That is, if his pet cat would let him. (ARNewsline(tm))

HAM RADIO IN SPACE: HAPPY BIRTHDAY AO-40

The AMSAT Oscar 40 ham radio satellite has celebrated its first year in space. Then called Phase 3 D, the satellite was launched on November 16, 2000 aboard an Ariane 5 booster rocket from Kourou, French Guiana.

Even though the bird suffered some major damage during an orbital transfer maneuver, it has survived. After several months of work by the team at AMSAT Germany, transponder operation started last May 5th. At that time the U-band and L1-band uplinks were connected to the S-2 transmitter passband downlink via the satellites on-board Matrix switch. Since then, hams on Earth have made hundreds of contacts though the satellite.

AO-40 is currently in a long period during in which the Earth eclipses the Sun near perigee. The eclipses actually began about August 28th, and will rapidly increase in length. They will continue well into June 2002. For the current transponder operating schedule visit:

http://www.amsat-dl.org/journal/adlj-p3d.htm (AMSAT-NA)

AMERICA AT WAR: FCC GETTYSBURG CHANGES MAIL ADDRESS

We told you it might happen and it has. At least for package deliveries. This, as the FCC’s Gettysburg, Pennsylvania office, announces that it has moved its mail handling facilities off-site.

The reason is the same as reported for FCC in Washington and CQ Magazine. Simply a precaution in case some of the strange people that we all call terrorists decide to target the Gettysburg licensing facility.

Its all fairly simple. Effective immediately, all overnight couriers, United Parcel Service and Federal Express deliveries have to go to a new location. That address is the FCC Gettysburg, Rear entrance, 35 York Street, Gettysburg, PA 17325.

The change does not affect US Postal Service deliveries. At least not yet. They will continue to be accepted at the office's physical address on Fairfield Road and diverted to the off-site mailroom. (FCC)

**

AMERICA AT WAR: VANITY LICENSING ON HOLD

I’m Henry Feinberg, K2SSQ, with late breaking news about the Amateur Radio Vanity Call Sign program which is now, effectively, on hold. This, after the recently announced changes in mail handling procedures at the FCC's Gettysburg, Pennsylvania license processing facility.

As reported, mail directed to the FCC Gettysburg office was being held pending the start of special handling precautions to address any biohazards. Now that ARRL has issued a further bulletin on the matter. It quotes the ARRL’s VEC Manager Bart Jahnke, W9JJ. He says that the FCC has processed vanity applications received through October 14. But says Jhanke, vanity applications received after that date remain on hold for now.

There is some good news. The FCC is tracking the receipt date for each piece of mail. Because the agency gives equal priority to paper and electronic applications, all vanity processing was being suspended until the mail situation is resolved. Once the FCC begins opening its backlog of mail, most applications will probably be processed in about 18 days based on date

received.

But there could still be problems for another group of filers. These are hams who waited till near the end of the two year grace period on renewing ham radio licenses. Jahnke says applications from those filing for renewal near the end of their two-year grace period will only be accepted for processing if they get to the FCC before the grace period expires.

For the Amateur Radio Newsline, I’m Henry Freinberg, K2SSQ. (ARRL Bulletin, FCC)

**

AMERICA AT WAR: THE PSYCHOLOGICAL SIDE OF RADIO

The media is not only reporting the war against terrorism. According to the Media Network e-newsletter, it has also become heavily involved.

Here in the United States, media organizations like NBC were the first to be targeted by those spreading the anthrax virus. And the e-newsletter says that in Afghanistan, silencing the Taliban's voice and putting in a replacement was one of the first aims of the US led military campaign. That plan seems to be succeeding, with the restoration of "normal" radio services in the key city of Mazar-e-Sharif and a few days later in Kabul itself.

In another development, the psychological warfare broadcasts of "Information Radio" have only been heard irregularly on shortwave. Media Network says that it has contacted those responsible for running the operation to find out its current status.

As soon as Media Network get some updated information, it will be posted at http://www.rnw.nl/realradio/features/html/afghanistan010917.html (Media Network)

ENFORCEMENT: FCC VS. RF ELECTRONICS- AN EPILOGUE

The FCC says that it is thanking the owner of R-F Electronics for his decision to stop selling non certified amplifier kits and says that its closing the matter. But the owner of the company does not appear to be ready to say “you’re welcome.” In fact, Sidney Lee Martin, KD4YBC, is using the World Wide Web to launch a verbal counter attack against the regulatory agency. Amateur Radio Newsline’s David Black, KB4KCH, visited the spot in cyberspace and has the rest of the story:

--

Sidney Lee Martin ran afoul of the FCC for allegedly selling illegal power amplifiers for use on amateur HF and 6 meter frequencies. On September 19th, the Commission's Riley Hollingsworth wrote to Martin, telling him to stop the sales -- or face enforcement action.

With the threat of being taken to court and having his amateur radio license put in jeopardy, Martin shut his sales operation down September 25th. And he's

taking a few verbal shots at the Commission.

Accusing the agency of being on a jihad, Martin says the FCC attacked and destroyed his business while letting another company continue selling non-certified amplifier kits. Martin says he will use his former business website to provide updates and comments on his tangle with the Commission. He's urging amateurs to ask questions and learn the truth.

In the meantime, the FCC appears to be closing the matter, at least as far as Martin's business is concerned. In an October first letter to Martin, the FCC's Hollingsworth notes Martin's comments that he has stopped selling non-certified equipment and thanks him for his cooperation.

The letter closes with Hollingsworth saying the Commission will review information Martin supplied about other sources selling non-certified equipment.

From Birmingham Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

If you are interested in seeing what Martin has to say about the FCC, take your web browser over to http://members.aol.com/rfelectron/rfelect.htm (ARNewsline)

**

ENFORCEMENT DOWN UNDER: A VERY BUSY ACA

The United States is not the only place where the government has been actively enforcing its radio regulations. So has the Australian Communications Authority -- or ACA. And the figures for the past year are now in and Q-News Graham Kemp, VK4BB, has them:

--

From this years ACA Annual Report we learn that this year, 12 penalties in lieu of prosecution were issued, three are under consideration by the ACA for withdrawal, seven were paid totalling $6,270 Australian, and two went to prosecution. In addition, prosecution proceedings without issuing penalties in lieu were instigated against six other persons for a total of 22 offenses.

During the year, the ACA conducted 1,200 Radiocommunications licence investigations, resulting in the issue of 267 verbal and 557 written warnings. No licence suspensions or cancellation actions were undertaken this year.

The ACA also investigated 781 complaints of interference to Radiocommunications services, and search and rescue authorities were assisted with the location of approximately 104 emergency
position-indicating radio beacons. Although careless handling or faults caused many of these, 21 beacons had been maliciously activated with the intent of disrupting emergency services.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Be it the United States, Australia or anywhere else, the same words always apply. Don’t do the crime if you cant pay the fine. (Q-News, ACA)

ARRL NEWS: THE BIG PROJECT EXPANDS

Some good news out of Newington. This, with word from the ARRL Schools wishing to take part in the Big Project can contact Jerry Hill, KH6HU at ARRL Headquarters, Field and Education Section, 225 Main St., Newington Connecticut, 06111. You can also find them in cyberspace at www.arrl.org. (ARRL)

**

ARRL NEWS: THE 2001 ARRL DIVISIONAL ELECTIONS

The results are in for the fall 2001 ARRL divisional elections and there are really no big surprises. In the Southeastern Division, Georgia Section Manager Sandy Donahue, W4RU, of Atlanta, Georgia, outpolled West Central Florida Assistant Section Manager Paul Toth, NA4AR, of Seminole, Florida by 478 votes. The final count was Donahue at 2783 and Toth at 2305. Both were contending for the seat being vacated by Vice Director Evelyn Gauzens, W4WYR, who decided not to seek a new term after 22 years of service.

In the Southwestern Division, San Diego Section Manager Tuck Miller, NZ6T, of National City, California, defeated Ned Stearns, AA7A, of Scottsdale, Arizona. The vote was 2485 to 2208. Miller assumes the vice director's position being vacated by Art Goddard, W6XD, who ran unopposed for director.

Last but by no means least, incumbent Pacific Division Vice Director Bob Vallio, W6RGG, of Castro Valley, California garnered 1924 votes to beat back a challenge by Gerald D. Griffin, K6MD, of Pacific Grove, California. Griffin polled 1225 votes. All those elected officially take office on January 1st, 2002. (ARRL)

**

HAM INDUSTRY NEWS: ELECRAFT IMPROVES THE K1

Elecraft's very popular K 1 compact CW transceiver has just became a four-bander. In addition to the 2-band version, the rig is now available with a single band-switched module that covers 40, 30, 20, and either 17 or 15 meters. No hardware or firmware changes are necessary to use the 4-band module and the module can also be ordered as an option to upgrade existing K 1 transceivers. For more information or to order, visit www.elecraft.com or e-mail sales@ elecraft.com. (Elecraft release)

COMMUNICATIONS BUSINESS: MORE LAYOFFS AT MOTOROLA

High tech giant Motorola has announced that it is reducing its work force by another 7,000 jobs, including an unspecified number of layoffs. The announcement came a day after the telecommunications giant reported a $1.4 billion loss for the quarter ended September 30.

Faced by a weakened economy and slower industry growth in worldwide cellphone sales, Motorola already this year had announced 32,000 job cuts to a work force that stood at 147,000 last December. That would increase the total cuts to 39,000 and trim the work force to approximately 108,000 by the end of the year - a reduction of about 26 percent. A company spokesperson indicated there could be more. (Published news reports)

**

HAMFESTS AND CONVENTIONS: SUPERFEST 2002

The Amateur Electronic Supply 8th annual Superfest open house is now slated for April 5th and 6th 2002 at the AES store in Milwaukee Wisconsin. According to a note from Molly Schreiber of AES, manufacturer representatives will be on hand displaying their wares and several forums are being scheduled. And as in years past, ham radio clubs are being invited to participate with free display space. Information on this and more is at the AES Superfest website. Its a long URL. Its in cyberspace at /www.aesham.com/superfest/sf.html. (AES Release)

**

RADIO PUBLICATIONS: DEPARTURE MESSAGE

CW aficionados attention. This one is for you. It’s a new book called Departure Message by Charles Lunsford that tells the story of an enlisted aircrew member flying as an Airborne Radio Operator in the 1950s.

Lunsford’s book traces one of the last of the Radio Operators trained in International Morse Code and who flew in the last aircraft purchased by the United States Air Force which had a Morse key as standard equipment. The book also describes some of the radio and radar aids of the time and the first top-secret transponders for identification.

Departure Message is published on-line by greatunpublished.com and is available in paperback or for download. More information is on the web at greatunpublished.com. (Charles Lunsford)

**

EMERGING TECHNOLOGY: APPLE I-POD

Apple Computer has unveiled a revolutionary new portable music player that can hold an entire music collection. It also takes Apple outside its core computer business for the first time in eight years.

The Apple "i-Pod" is the size and shape of a deck of cards, with a small LCD screen and round dial on a white front and a stainless steel back. It holds

about 1,000 songs in the MP3 music format and has a battery life of 8to 10 hours.

The only negative. The “i-Pod” currently will only work with Apple Macintosh computers, but that may change. About 7 million existing Macintoshes have the necessary hardware and software to be compatible with iPod. Apple president Steve Jobs says the company is considering porting it to windows based machines as well. (Apple release)

**

TECHNOLOGY FAILURE: COMPUTER FAILURE AT THE CALTECH USGS EARTHQUAKE MESSAGING SITE

A 5.1 magnitude earthquake near Anza California on October 30th should have generated an almost-immediate e-mail message to all southern California Seismic Network e-mail subscribers. However, this particular message was delayed about seven hours due to a catastrophic network hardware failure that occurred minutes before the shaker. To subscribe to this free and usually reliable reporting service, see http://pasadena.wr.usgs.gov/latest/mailing_lists.html (CGC Communicator)

**

INTERNATIONAL - FRANCE: ARISS-EUROPE QSL ADDRESS

The ARISS-Europe QSL Bureau's address has changed. Effective immediately, all European requests for ARISS QSL cards are to be addressed to AMSAT - France, 14 bis, rue des Gourlis, 92500 Rueil Malmaison, France.

Those applying for a QSL should include a self addressed envelope and two International Reply Coupons to cover the handling cost. The ARISS-Europe QSL Manager is Christophe Candebat, F1MOJ. His email address is F1MOJ@aol.com. (ON1CAU)

**

INTERNATIONAL - AUSTRALIA: VK 80 METER SSB BAND TO BE EXPANDED

The Australian 80-meter SSB 'DX Window', at present limited to a 4-kHz segment around 3798 kHz, is due to be expanded - but not until 2004. Jeramy Boot, G4NJH, has more:

--

The Australian 80-metre SSB 'DX Window', at present limited to a 4-kHz segment around 3798kHz, is due to be expanded - but not until 2004. In Australia, the band 3700 - 3800kHz is presently allocated to the commercial land mobile service, effectively limiting amateur SSB operation to a single frequency. Following an approach by the Wireless Institute of Australia, the Australian Communications Authority has agreed to proceed with a change in the allocation of the band 3776 - 3800kHz. The ACA's intention is to reallocate this band to the amateur service on a primary basis from the 1st of January 2004. Jeramy Boot, G4NJH.

--

Current commercial users of that spectrum won’t be left out in the cold. They will be moved to existing land mobile spectrum adjacent to the new amateur band by the end of December 2003. (RSGB)

**

SPECIAL EVENTS: K7A PEARL HARBOR DAY STATION

Pearl Harbor Day will be celebrated in the ham radio world December 7, 8 and 9, when Special Events Station K7A comes on the air from Phoenix Arizona. K7A will be operational on most High Frequency bands. More information is posted on www.aztenx.org (Superstition ARC)

**

DX

In-D-X, Jim Weidner, K2JXW, who is the founder and president of the Amateur Radio Lighthouse Society announced the groups second annual Lighthouse Christmas Lights QSO Party. The event is scheduled for December 22nd to the 23rd. For more information please visit www.arlhs.com on the world wide web. (News release)

**

THAT FINAL ITEM: VK HAM RADIO IN THE AIR ON THE AIR

And finally this week, the story of the celebration of an old airplane and the part played by ham radio. It was an unusual job for hams. Again, from Australia, Q-News Graham Kemp, VK4BB:

--

VK4's Redcliffe & Districts Radio Club Inc. ran a radio link, at the request of Redcliffe City Councillor Ian Poyitt, from an aircraft to Redcliffe Radio Station 99.7 FM. The Link commemorated the 70th anniversary of the Tiger Moth. There was approximately 100 old aircraft participating in this rare fly-past.

--
Flight Audio Here
--

A hand held scanner's audio was fed directly into the mixing desk. A 2 meter radio using a quarter wave antenna from the aircraft, then a crossband link to take the 2 meter signal from the aircraft and retransmitted this on 70cm using the clubs new Yaesu FT-847.

The flight went off without a hitch with Steve Harris VK4HRS as the Aeronautical Mobile Announcer, having flown for the first time and enjoyed himself immensely.

--

Well done Steve and all at the Redcliffe Club. (Q-News)

## 2849. Any suggestions for an antenna A/B switch?

Newsgroup: rec.radio.scanner
Date: 2001-11-25 22:28:02 UTC
From: Johnny <johnnydoe6969@hotmail.com>
Message-ID: <251120011628086148%johnnydoe6969@hotmail.com>
Source record: 56299

I need an A/B switch for my mobile setup, to switch between the cellphone antenna and my 2m/440 antenna for everything but 800-ish MHz. My local PD is 800 trunked, and is staticy and weak, even in town on the dual bander, but most everything else I listen to in the 2m/400 areas which the dualbander is great for.

Any suggestions besides the Rat Shack TeeVee A/B switch? I've looked around the antenna commercial sites on the net but haven't found anything but HF switchers.

Thanks for your time!

I just noticed today while messin around that sometimes when I don't hear the car side when its on the Base channel, but if I then switch up to the accompanying mobile channel I can. The problem is that the base keeps the tower open while the call is active. Just wondering what everyone does to hear both sides, I don't want to sit there and switch channels manually all the time.

I was hoping someone can help me out. I am looking to buy a scanner and have narrowed it down to these three:

BC245XLT
PRO 93
PRO 94

Only because I believe they offer the most from a handheld perspective.

I am looking for your opinion on which one I should buy. I am new to this area/hobby and I am looking for everything I can get including the trunking capabilities, as I live in an area which require them.

Also, any suggestions would be greatly appreciated.

Please advise.
George

It is not possiable to view the regular TV signals with a computer and scanner. YOu can do the sstv. SSTV is just audio signals. Not sure what frequencies you are going to get on the scanner but if you can find any FM signals that are sstv tehn you should be able to receive them. There are several sound card programs that will decode the sstv audio and display the pix on a computer.

Look here for some:

What about a double-pole, double throw toggle switch? Do you need
amplification?

# 2866. Re: Pro-92 and Pro-93 Cloneable?

Newsgroup: rec.radio.scanner
Date: 2001-11-26 03:59:33 UTC
From: ericDONOTSPAMMEthered@eudoramail.com
Message-ID: <kcf30uo6a8tq73nvbrgjviqcqehjcaj15g@4ax.com>
Source record: 56317

Here are some links to the comments of others... the more I think
about it, I want a Pro-95 with all of the features of a Pro-92, the
enhancements of a Pro-93, the neat things of a Pro-94 and I'll buy the
1st revision of that product <grin>

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=499
usability

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=563
quirks

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=525
alpha tags

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=333
adapt-a-plug

And a comparison to the Pro 92 makes me want to wait for the "Pro-95":

http://www.trunkedradio.net/cgi-bin/ultimatebb.cgi?ubb=get_topic&f=23&t=000032
who writes:
I am not so certain about the Pro 93. About the only thing that I did
like was the fact that it runs on 4 batteries instead of 6. You have
200 less channels than the Pro 92, less trunking capability (LTR), no
CTCSS/DCS search and display as the Pro 92, no aviation, and no
supporting programing software. Also, the Pro 93 operates off of
firmware version 1.0 (Not Good)if ths is the same firmware used in the
initial pro 92. And the price is the same as the PRO 92. So why pay
the same for less?

If you have a ctcss capable scanner, when you have the freq. (i.e. 141.195) in there attach the ctcss tone with it. (107.2) Then you should be able to hear both sides of the conversation.

# 2873. OPP how to get rid of the squawking??? Ontario

Newsgroup: rec.radio.scanner
Date: 2001-11-26 04:48:07 UTC
From: R&D Smith <rdsmith@recorder.ca>
Message-ID: <jQmM7.3$Pa3.502835@news.ripnet.com>
Source record: 56326

I am monitoring the OPP (Ontario Provincial Police) They have 9 different towers with an abc in each division so itd would go 1a 1b 1c, 2a 2b 2c and so on and every tower has a mobile and a base frequency or a frequency and a mobile where the frequency being the tower. ex. 1a mobile 139.470 1a base 141.390 1b 139.185 1b base 141.195 and so on.... and it says that all opp frequencies use CTCSS PL-TONE 107.2 Hz. Set your CTCSS tone to this to get rid of the computer generated squawking.... but its seems to be not working , i have a BC 245 xlt radio and i can pick up there mobile repeaters but i have a hard time getting rid of the squawking.. so could a OPP fellow monitor or someone who knows what im talking about please help me.... I have the winscan software and its has a spot where i can set the pl tone to anything i want os this apply to my scanner,, i am assuming so... so please help

goto where they stop for coffee and scan them.
look in the window or ask to sit'n'see, look for brand names and post or search for what the company says there product can do.
Goto where they speed trap alot and scan for the mic or the rx mixer IF oscillator (advanced).

Most SSTV signals are found below 30mhz, the most popular being the 20
meter band 14.230mhz thereabouts. These are ssb transmissions.

Actually the R3 pulls in regular TV fine. If you are looking to get
other video then that too can be had.....for a price. My dad actually
pulled in good signals off of his security cams from a couple of blocks
away, but he had to use a commerical yagi antenna for that band and it
was quite pricey, about 400 bucks. The nice part was the thing LOOKED
expensive! Gold tone, very well made and looks like it will outlast
humans on earth. Luckly he was just testing both. He never did get the
R3. Got the Yaesu 500.

# 2879. Radio Frequencies for Dawson Creek

Newsgroup: rec.radio.scanner
Date: 2001-11-26 06:59:55 UTC
From: abiance@hotmail.com
Message-ID: <4d94f70e.0111252259.758fea84@posting.google.com>

Hello, a short while back I was at a website which listed frequencies for Dawson Creek, British Columbia, Canada. Unfortunately I cannot find that website; I believe it has been taken offline. I wondered if anyone managed to save the site, or at least that portion of it. Am specifically interested in the RCMP here. As the Chetwynd repeater is so entertaining, I'm assuming the Dawson Creek one will be as well! But I just cant seem to find it.

Thanks in advance!

I have the ctcss tone programmed in, but do not always hear both sides. I know most, if not all of it is because my antenna is not as high as the base. I actually lowered the delay and its working for some. I still have to check to see if I can hear the mobile on some.

Thanks for the suggestion though.

The BC245 does not have a CTCSS tone decoder so you will not be able to get rid of the tower. You can still listen to the mobile as they do not use CTCSS, although I have found two are open all the time. This may be just interference in my area though. I used to have one of these scanners and used the following trick, although it is a pain.

Lock out the towers that are squawking and then when you hear another one start to squawk, unlock all and scan they should be talking on one of the ones you locked out previously. I know this is quite the pain.

George's *biggest* problem is that he's eager to get websites up,
without spending the requisite amount of time to really develop a good
understanding & familiarity of the general topic matter and specific
items he wants to cover on his web. This has been the case with him
for a couple years.

I might have been the same way when I was 14 or 15 years of age, so
assuming George is around that age, I suppose we should just humor him.

Nice try (not...), but they're not on continuously. Most are rigged so
that the VCR only starts recording once the emergency lights are on, and
the wireless mics are manually turned on by the officer.

Anyway, the RF is usually in the 169-216MHz spectrum.

What's "intermittent?"

As for your range claim, that's kind of worthless. That's probably
the range in the specifications for the units, but I think most of us
will routinely hear them at greater distances.

A is 1, B is 2, etc.

OE is 05, may
ID is 94, 1994

that one is too new to be modified, the steps are wrong for cellular even
on the older models.

Jan 94 and some Feb 94 were the last.

Message-ID: <UmEM7.1244209$si5.54475150@typhoon.kc.rr.com>
Source record: 56248

Trust me... I have reps across 6 states selling in-car video/audio systems. As to the range... Most are 50mW and VHF (Kustom Eyewitness / Mobile Vision System 7) with a typical distance of 250' (sure, under very good conditions sometimes further). The in-car video system we install (Lear CruiseCam) comes with a 50mW UHF transmitter that will reach out to 500' (our field tests yield transmissions to 650' under various conditions, but that's about it). Your right in that it is the published specs., however published specs (while conservative) are published for a reason.

Intermittent was misinterpreted. The officer only turns his wireless on (manually) only when he needs it (reason- battery drain: 8hrs max).

# 2899. Pro 2050 question re. trunking in Calgary, Alberta

Newsgroup: rec.radio.scanner
Date: 2001-11-27 04:41:41 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10111262140310.31292-100000@srv1.calcna.ab.ca>
Source record: 56249
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a copy of the Alberta Frequency List, and in it I have looked up the Motorola Type I trunk frequencies for my area. I have entered these frequencies into a Radio Shack Pro 2050 Trunk Tracker scanner while the scanner was in trunk mode. I put all of these frequencies into a single channel in a single bank, in ascending order. The frequencies in the book range from 853.4875, 853.7875, etc., up to 858.9875 MHz.

There are no sounds coming out of the scanner's speaker when I put the scanner into trunk tracking mode and get it to scan this bank. If I scan these exact same frequencies in conventional mode, I get voices, beeps, and squawks. I have let the scanner "scan" in trunk mode for several hours during the day (at the same general times as when I tried the same channels in conventional mode) but have not heard anything.

Sometimes while in the trunk scanning mode the display goes out and a square channel activity indicator goes on, and the frequency number is replaced by dashes; but there is still nothing from the speaker, and no ID numbers appear. Pushing "SCAN" and "SEARCH" at this time do not help.

I set the squelch down to nothing while in trunk scan mode, just as the manual said. The Pro 2050 does not have an adjustable search step, but is hard wire progammed to track Motorola Types I and II systems, as well as hybrid systems. These are systems I am trying to track, if they exist in my area. I have not tried to track Motorola Type II systems or hybrid systems as of yet, because there are already signals happening on the (listed but not to me certain) Type I systems here.

There is no-one available at the local ham radio club (which I have contacted) who understands trunk tracking scanner programming.

Apparently, trunking is used in Lethbridge, which is a smaller city near Calgary; so there is a strong possibility that trunking is used in Calgary as well.

I have done some web searches about trunk tracking scanning, but they have not yielded the kind of results I need in order to get the Pro 2050 up and running in trunk tracking mode. The search results just give ads for scanners and explanations of basic principles of trunked systems and scanning them.

An additional disadvantage I have is that I have never used a trunked system to talk to other trunked radio users.

The scanner works fine in conventional mode (to listen to air traffic controllers, etc.).

My questions are these:

1) How much voice activity (if any) is on Motorola Type I trunked systems in Calgary? Are these systems used only for things like gas meters (if at all) in this city?

2) Why can't I get my scanner to work in trunk tracking mode?

Thanks in advance for any help,

Ian Douglas

The TOC is the area of a CD that tells the CD player or CD-ROM drive where the begining of each track is. Stands for "Table Of Contents" not to be confused with books.

# 2903. FOR SALE - AS IS - Clearance

Newsgroup: rec.radio.scanner
Date: 2001-11-27 07:24:08 UTC
From: Lou <tech@dp.net>
Message-ID: <9tvg3m$11v9$1@news.dp.net>
Source record: 56255

ALL below offered for parts value only. AS IS - NOT RETURNABLE.

BC 800 XLT - Have the AC cord, nothing else. Unit comes on, Display goes weak usually either right away, sometimes after a short period of time. Not sure if it still receives. It was when last checked. If you need parts or feel you can repair it, here ya go! I understand from Uniden the parts for these are no longer available. $20 shipped. The transformer alone should be worth about that much.

Regency Crystal Controlled scanners. One seems to work but needs crystals. It is in fair to good condition. The other seems to have a scan problem, an antenna mod was attempted, though the rest of unit looks unbutchered. Perhaps the second can be a parts radio. It is similar to but not the same as unit 1. No antennas or power cords and some case hardware is missing. $25 pair shipped.

Other items available. Scanner crystals - many new in sealed packages, and so on. If you're looking for something especially a little older, ASK!

MOST items sold AS IS even if new, as most is on clearance. I will tell you to the best of my knowledge up front the condition of any item being bought.

Postal MOs only accepted. Most orders shipped same day or within 24 hours.

yep. 1 of our stores early last year told me they weregetting rid of their stock.I thought the manager was just beinga prick. Like usual. He was always rude. Most RS around here don't sell any parts anymore. Two days ago I went in to get a replacement on a defective item. The guy thought he was smart and shit. He types the item in the computer and says. Nope it is discontinued. "You must of bought it years ago". I told him I bought it about 3 months ago. He still didn't know what this crappy item was. He says. What is a discone. I said, a Dumb antenna that only works on some frequencies well. My 2 meter 5/8's works better on low vhf and so on. but uhf is a diff story. I am glad my electronic wholesaler is still selling electronic parts.

I dunno. I had a flood of rg-6 laying aroung. it worked way better then rg-58, But recently I changed to rg-213. Major improvement again. No matter. I will only tx with 50 ohm coax. I tried as a test with 72 ohm rg-6. I didn't like it.

but. everyone has a different opinion. rg-213 is much cheaper now. so I bought 100 feet. I never regreted it yet. I still like matching my radios with the coax with the antenna.

hi, I'm new to this group. I have a uniden bc172xl that I used for about a year some time ago.

After a year or so of sitting, I went and plugged it back in to see if the thing would work and it didn't.

The desplay doesn't come on and no audio. I opened it up and there are no fuses to be seen and it is all surface mount as it looks to me. Is there anything I should check? It has a small power transformer, but I wouldn't think that it was bad. Nothing looked burned or damaged.

Thanks!

I would like to get this thing working again. Any mods for this scanner?

Tim
Where is your website? Personally George is the one who turned me
onto milair listening. I have seen another post on here in the past
month were there was another person turned on to milair by George. I
find his list of frequencies to be accurate and active. I live in
Florida also and am glad for his website. Without it I would have to
spend all my free time in search mode leaving no time for listening.

I have seen a few people (tim, allen, and glenn) who have condemed
George up one side and down the other. But the problem is that his is
one of the few sites (he runs relating to radios) where I get
frequencies that actually work.

Tim, my question to you is this. Would the radio world be better off
if George removed his webpages?

Bill

They were taken down on 11 SEP because they (at least the ones you're
referring to in the feeble point you're trying to make) dealt with
strategic command, control & communications.

But so what. Regardless of whether or not I have any web sites, it
doesn't invalidate my observation about George.

> Personally George is the one who turned me
> onto milair listening. I have seen another post on here in the past
> month were there was another person turned on to milair by George.

How nice for you, but again, it doesn't invalidate any claims. You're
apparently a newbie, and found George's list helpful. That's nice. But
also recognize that as a newbie, you're not exactly one to judge the
technical merits & accuracy of any web page on the topic.

> I live in
> Florida also and am glad for his website. Without it I would have to
> spend all my free time in search mode leaving no time for listening.

Maybe you would, but it'd only be out of ignorance. Besides,
searching isn't a bad thing. Here's some education for you: Search
with one scanner, and scan with another.

> I have seen a few people (tim, allen, and glenn) who have condemed
> George up one side and down the other. But the problem is that his is

Does this mean you had top-secret information on your website? Does this mean that the miliatry really doesn't know that people are listening in. Does this mean that the military can not keep secret communications out of the hands of those who don't need to know? I guess I don't understand why some MilAir monitors feel they have "secret information". Come-on people, point blank, if the Military doesn't want you to hear what they are saying then YOU WONT!.

Even national magazines are printing CAP freqs and detailed callsigns of CAP flighs/missions, except for Florida CAP freqs, you can go to any bookstore and get a list for your area. The only reason I haven't printed the Florida CAP freqs on www.MilAirComms.com is simply out of respect of the wishes of others.

>

Everyone doesn't have time to "search" and want to hear something now.
If you want to promote a hobby then you want people to enjoy the hobby
and in some areas of the country its a very long process for finding
MilAir freqs via a search. Not all new people entering the hobby have
more than one scanner to do as you suggest.

>
> You mean, as the kid threatened to do?
>

Kid? I don't get this one, do you think I'm a kid?

In summery I'm starting to realize something about the Hobby of MilAir
monitoring. There are a lot of "snutty" people with their noses stuck
pretty high in this hobby. I'm starting to see that if you aren't "in
the click" you're casted as someone who doen't know anything. To the
new people entering this hobby, don't give up they all aren't "snutty"
people, its just the "snutty" ones are the loudest ones.

Message-ID: <5934-3C03D299-544@storefull-211.iap.bryant.webtv.net>
Source record: 56267

Hi gang, I can't locate my manual. The uniden site wants $7.50 for one, and it's currently unavailable.

I can't remember how to program the favorite or 'private' channels and the 'memo loss' indicator is on the display. When I hit the program button I get 'prg-loc'.

If anyone knows how to reprogram I'd sure appreciate the info.

Many thousands of thank you's for any help!

-Shecky

If you do decide on a Pro-92, make sure you get the Pro-92A or
Pro-92B. The original one does not do Motorola trunking very well on
big systems.

Are you using the original power supply or a new one? The new one might
have the wrong polarity (if it supplies DC power).

## 2920. Cordless Phone Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-11-27 20:11:56 UTC
From: Paul Bailey <paulb@america.net>
Message-ID: <3C03F38C.C08A5A72@america.net>
Source record: 56270

Is there a complete list of frequencies used by cordless phones?

Is there a standard RANGE at least?

If I am trying to find the BASE frequency to a cordles phone.
What ranges should I search.

I was thinking 43.7 - 47.0
902-908
925 - 928 in the event the base and handset are
reversed.

Am I leaving anything out????

Thanks, Paul

Reliable trunking operation and reception. No otherr are needed!

CB Band
Faster scan rate
4 batteries instead of 6

The Pro 93 is reliable and the Pro 92 is not.

What is the best scanner to buy that has the most coverage and modes.

I can not stand having holes in coverage.
I would also like to copy some code, lisiten to some SW and monitor some SSB activity on 40 meters.
And have ACCESS to cell freq's for when it becomes legal to monitor RF that someone is blasting onto my property, (without permission).

What should I look for?

As you might suspect, it's a signal generator. That, in this case, is probably an RF oscillator. Unless you're a demented antiquarian ham, it's hardly "special/unique" and, in today's context, it's essentially useless. I'd suggest using it for a doorstop - it's probably too small to be a boat anchor.
cheers,
grendal

Hello Ian, I do not have a trunk tracker, however I just wanted to
remind you that there is a trunk for police/fire/ambulance in the
866-869 Mhz range here in Calgary.
> 1) How much voice activity (if any) is on Motorola Type I trunked
> systems in Calgary? Are these systems used only for things like gas
> meters (if at all) in this city?
There is a lot of activity in both trunks, however I'm not sure if
they are type one or not. (I use a Pro60 that receives the trunk but
does not track it). I have truly read success stories about trunk
tracking. Jason Low comes to mind, he used to be on this newsgroup,
but I have not seen any postings from him lately. Another Calgary and
area scanner buff is Steve Mason, hopefully he will see your message.
If not, maybe you can try hime on the calgary.general newsgroup.
Good Luck, and happy scanning.
Sincerely
Fred Burgess

## 2930. ctcss and scanning

Newsgroup: rec.radio.scanner
Date: 2001-11-27 21:30:00 UTC
From: grendal <grendal@nowhere.com>
Message-ID: <3C04064D.4F26F192@nowhere.com>
Source record: 56278

I've noticed a few misconceptions regarding CTCSS tones
on this NG and thought the following might be helpful:

CTCSS tones are used between CTCSS-enabled reciever
transmitter pairs. They allow the receiver to open squelch
when a freq contains a specific tone and are useful to keep
from receiving other transmissions. A scanner/receiver tuned to a
specific freq can (and will) ignore CTCSS and simply monitor whatever
transmissions occur on that freq. It is not necessary to have
a "CTCSS enabled" scanner (most are not) to monitor an RT pair
that is using CTCSS. I've never seen a scanner that has CTCSS
capability - maybe because it's self-defeating for a monitoring
function.

CTCSS only hides non-CTCSS transmissions from a CTCSS receiver.
To do that, both receiver and transmitter
must specifically choose the same CTCSS tone for the freq used.
CTCSS only claim to "privacy" is to perform this function. In fact,
it's not "privacy" at all. It is used when a group of RT's are using
the same freq and don't want to hear every conversation on the freq.

cheers,
grendal

And why bother. Most cell phone users are on digital, PCS or Nextel now. Besides, do you really care about who's gonna pick-up the kids or has to work late. If you want to know what's really going on monitor ambulance services and fire. When all hell breaks loose they will be the first dispatched.

Actually it helps keep out the morse code station IDs that are
irratating to hear. When they transmit these IDs there is no CTCSS
used like when there is voice traffic. It isn't really needed for most
users IMO for other than that. I assume that people who own Uniden
made radios like CTCSS because of the poor interference rejection and
to cover up for their poor receivers. For Example: On Uniden radios
155.46 and 155.475 (national) both carry mobile transmissions and
interefere with each other with bleedover. Well if you use CTCSS then
the non CTCSS National traffic won't bleed through on 155.46 which
uses CTCSS. So Uniden radios need CTCSS to cover these bleed-throughs
and GRE and other radios don't need it.

Bottom Line: CTCSS helps cover up poor Uniden receivers.

CTCSS can be very useful. If different users share
the same frequency CTCSS is a great way to ensure that you
are not bothered by communication from the other users.

The use of CTCSS also means that your radio will not open on any
interference caused by strong nearby transmitters (intermodulation) or
electronic equipment eg. PC's. Even professionally made radioes may have
such problems which can be extremely annoying.

Most scanners suffer from intermodulation problems when connected
to efficient outdoor antennas. If the services you are monitoring
use CTCSS, you can use CTCSS on the scanner to ensure that it only
opens when there are actual transmissions to listen to.

Here in Denmark CTCSS has become very popular on scanners for
one particular reason: It blocks any encrypted transmissions
used by the police.
Without CTCSS the scanner will stop on the encrypted transmissions
which sounds like white noise - very annoying to listen to :-)
With CTCSS the scanner will not open at all.

Regards
Per

GRE scanners have exactly the same IF filters that Uniden radios have and
the specs are the same too, at least for the newer models. There is no
difference between the two for adjacent channel rejection. GRE does have
more immunity to front end overload and intermod but that is another issue
completely. Compared to professional gear, both GRE and Uniden fare poorly.

An unblocked Yaesu VR-500 will get you all you want for around $200. Go to www.bander.com, but inquire via e-mail for the latest price...they don't keep their web page up-to-date. And you'll need a decent aftermarket antenna because the stock ducky is junk.

# 2941. OPP monitoing.. how to get rid of squaking noise

Newsgroup: rec.radio.scanner
Date: 2001-11-28 00:24:09 UTC
From: R&D Smith <rdsmith@recorder.ca>
Message-ID: <AbWM7.7$4j2.759842@localhost.localdomain>
Source record: 56292

I am monitoring the OPP (Ontario Provincial Police) They have 9 different towers with an abc in each division so itd would go 1a 1b 1c, 2a 2b 2c and so on and every tower has a mobile and a base frequency or a frequency and a mobile where the frequency being the tower. ex. 1a mobile 139.470 1a base 141.390 1b 139.185 1b base 141.195 and so on.... and it says that all opp frequencies use CTCSS PL-TONE 107.2 Hz. Set your CTCSS tone to this to get rid of the computer generated squawking.... but its seems to be not working , i have a BC 245 xlt radio and i can pick up there mobile repeaters but i have a hard time getting rid of the squawking.. so could a OPP fellow monitor or someone who knows what im talking about please help me.... I have the winscan software and its has a spot where i can set the pl tone to anything i want os this apply to my scanner,, i am assuming so... so please help

Look for a good scanner and a good SW reciever. One radio will not do all of what you want well.
If you have to go the one radio route then go for one of the higher end hand helds from Yupi or AOR. The Yaesu VR5000 or AOR 8600 are good base radios too. If you have the bucks go for the Icom 8500 or R9000. Forget about the cellular thing there is little or no analog cellular left in the 800 MHz area, same is pretty much true for cordless. Phones are going digital, spread specturm etc and while you can receive the signals you will hear little or nothing.

Having a CTCSS enabled scanner is useful when you want to block out
one or more agencies transmissions on a particular frequency.

For example, the local PD (using CTCSS) is on the same frequency as a
moderately distant local government truck pool operation. Using CTCSS
blocks out all the unwanted transmissions, leaving the local PD clear
as a bell.

canadian scanners are illegal to own outside of Canada or Europe. Well, um. Let me rephrase that. You can buy a scanner in Canada for the US. Only if it is a blocked version and not a unblocked version.

I don't believe it's an offense to *own* a current production unblocked scanner in the US, just as it's not an offense to own a gun (unless you're a felon). However, it is an offense to listen to "banned" frequencies such as cellular phone, cordless phone, etc., just as shooting someone with that gun.

It also is illegal to import into the US and/or manufacture in the US, a production unblocked scanner product. So technically it's illegal to order one from Canada and have it shipped here or bring it with you across the border, if it's in current production. I am not sure how all this applies to *used* scanners, that may or may not be currently in production. It gets kinda murky.

In any case, it's not illegal to simply posess a current production unblocked scanner. If for no other reason than it's OK to also own a unblocked scanner that is OUT of production.

Yes you will need the 107.2 Hz PL tone to lock out the data signal being sent, when the voice is being sent the tone turns on and when they unkey it stops transmitting.

Ironically, The OPP will be switching to a new VHF Motorola Astro digital trunked radio system very shortly. You will need to purchase a new digital scanner from Uniden next fall when it's released for sale in North America, in order to listen to them on their new system.

I'm hoping that the next firmware revision fixes the identified
problems with a 93. It may be better than the 92, don't know, but
I've decided to hold off on the 93 for a little while.

# 2961. FS: MALDOL MH-510 6M/2M/440 "Active Hunter"

Cricket purchased the other available 5 MHz CDMA band sliver
in the Portland, OR area. (B band I think) Cricket is national and
I don't know what they have in other cities.
Some carriers had to forfeit the bands they bidded on after not
being able to actually build out.
I'm not sure of the status of the auction on the 700 MHz band.

My sincerest apologies for offering what I thought was something of potential use to the people in this "scanner" newsgroup.

My ISP was promptly informed "I" was going against charter with my recent post.
I was then told about it - "politely" by them. I can only wonder if the others offering items FA or For Sale, have been warned as well. It isn't like I've done this daily and as I can see, I am not the only one guilty of doing so. My listing appeared with my "business" tag, but it was still only to offer something I thought was of use to "someone" with an interest in "scanners". Guess I was wrong.

I've removed this newsgroup in the past for other reasons which were not of subject matter. Constant bickering for one. Something those who hold a "charter" near and dear to their hearts, should also look long and hard at.

I'm out of here.

He he :-)
I guess that _IS_ the correct answer. However, I was really looking for an
'electronic' piece of equipment. That is, what do people use for an
all-round scanner/receiver?

Well, for a lot of band coverage in the VHF and above region, I use a PRO2005 and a couple of PRO2006's. I've had the 2005 since it was new and obtained the 2006's in the past year or so used. I was at RS this past weekend and they STILL don't have another scanner that is up to the specs or quality of these units.

Maybe we should "solve" that problem the same way, by making it illegal to watch. :)

I use a BC780 for everything from 25-1300 MHz, along with an IC-706G. I also use a Pro-2026 and a 2036 in the shack.

I plan on building a console for the scanners with a circuit to feed all scanners into one or two speakers with separate volume controls for each.

Jason

I think the 700 has a lock out switch on the back.
As for programming just go to the channel you want to program
go to Freq. you want store, pushprogram when it starts blinking just
go back to thr channel and push program agin

don't hold me to that

good luck

I don't mind 15 (or 30 rnds.) either but that cellphone band will never be given up.

The product was not "dumned down" it was restricted from public sale.

Your argument is purchase or remanufacture am illegal product because someday it might be legal. I think I'll run and get some kiddie porn, heroin and sawed off shotguns just in case the law changes.

Besides, if it ever become legal to own don't you think there will be a flood of them available cheaper than they are on the market right now?

We all know monitoring Cellphones is illegal. The perception is that monitoring cordless phones is also illegal. As I understand the law the only protected freq are those belonging to Cellphones, PCS, Nextel, etc. The law pertaining to cordless phones, i.e. the ones connected to the wired phone service using a base station, prevents your discussing, sharing or profiting from what you hear. It does not forbid listening or owning a receiver capable of doing so. Does anyone agree with me? Not that I listen to these freq. Been there, done that, BORING!

Mark

Depends... I use an R8500 and a VR5000 for weak signal stuff and the 780XLT
for local trunked stuff.

The 780XLT is feature rich but deaf compared to better receivers.

If you don't need trunking bypass the 780 for a better receiver.

You're right. It's not illegal to listen. It IS illegal to share the
information.
A few years ago an Indiana town marshal arrested a woman after hearing her
discuss a drug deal on her cordless phone. (He was sitting outside her
house in his patrol car listening to her on a scanner because he suspected
she was dealing)
The case was dismissed because he lacked probable cause for the arrest. The
judge cited that what the cop heard on the phone freq. was inadmissible.
Now had he had a warrant to "tap" her phone......

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

I've just added information on www.MilAirComms.com on current HF, VHF, and UHF frequencies for NASA which will be used for tomorrows launch of STS108. Included is a complete guide (as complete as I can write with the knowledge I've acquired) on how to monitor NASA communications before, during and after the mission.

Also included are links where you can hear live mission audio during the entire mission. Handy for those who can't pick up a rebroadcast via Ham Radio. I also have included a link which you can watch Live NASA TV during the mission.

Check out http://www.MilAirComms.com, your current frequency guide for Military and NASA communication frequencies.

Is there a complete modification yet for enabling the 800MHz range in the Pro 2021. I know there are a couple of diodes that when clipped out allow scanning in that range and another but is there an additional mod to activate one of the input rf sections so the unit will really work in that range?

Source record: 56159

Mark,

Why do you think the cell phone band will never be given up? I think one day it will. As technology screams forward at unthinkable speed. I think it to be a very logical conclusion to believe that we as a people will, at some time progress beyond our current restrictions (referring to restrictions in technology). Only time will tell, however it seems time is on my side. 75 years from now my argument can still be made.

I am not sure what I have written that makes you think or feel that I am making an "argument" for the purchase of or re-manufacturing of an illegal product. If this is what you understand me to have written, it is a misunderstanding. I can abide by a law at yet disagree with the law. I am NOT making this "argument". Though my preference would be that this law had never been written.

My argument... I do not like the federal government making a law that says I can not OWN something. If you intend to continue the debate please do not ask "Do you think anyone should be allowed to OWN a tactical nuclear weapon?" No! I do not. We all draw the lines at different places. I would prefer the line to be drawn somewhere on the other side of a RADIO an yet on this side of the A-BOMB. I strongly disagree with the government making a law that regulates what I do with RF that is being transmitted onto my property. This RF is un-solicited, and if those responsible for it, don't want me to use it, then point the antenna or satellite somewhere else!

I used the phrase "dumbed down" for lack of a better term. I just do not like a company having to do extra work, to make there product do less, for the American public.

Your last point I concede. Mfg.'s would have the product on the shelf within a week.

Hopefully my opinion is well understood. I do not own illegal weapons, receive satellite channels I am not paying for or look forward to spending my free time listening to someone else talk on the phone.

Every law, takes some freedom away, from someone, somewhere.

No offense has been taken by me, none has been intended for you.

God Bless, Paul
What a privilege it is, to live somewhere that private citizens can debate something like this in the open.
At least for now?

Source record: 56160

Can't be done. The so-called mod just allows the display of 800 MHz frequencies. The needed internal circuitry to actually receive and deliver the signal to the audio section is not in the scanner. This is not a case of unblocking certain portions of the 800 MHz band, as you would do with the Pro 2022, the Pro 2021 never was intended to receive the 800 MHz band at all, so the necessary RF section just isn't there. I own both the 2021 and the 2022, so I've looked into it previously. The only way to receive 800 MHz on a 2021 is by using a downconverter, such as the Super Converter 9001 that was sold by GRE. These converters, which convert 800 MHz signals to the 400 MHz band, are no longer legal to manufacture or sell new in the U.S., they are occasionally available used on eBay.

You are correct. You can't profit from what you hear regarding ANY
transmission (with a couple of exceptions), but the cordless phone
case went to the supreme Court four or five years ago and they said
there was no expectation of privacy. It is okay to listen to cordless
phones.

# 3011. Re: Need advice on trunking

Are you nuts?* That may be, but I'm not a doctor. Can you receive the trunking systems where you live, and is there anything on the trunking systems you want to listen to? If the answer to both questions is yes, then get one if you want. If the answer to both questions is no, then unless there are other features you can use that are only available on a trunking scanner, stick with a conventional scanner. Why buy something you can't/won't use. You'll probably never be able to monitor Nextel.

Mark

* I own 5 base scanners, 2 mobile scanners (1 trunking), 7 handheld (1 trunking), and an unknown quantity of older crystal-controlled scanners (and a LOT of ham gear). Just how many scanners do you have to have before you are considered nuts. A former girlfriend felt that owning any at all placed my sanity in question, she told me it was either the scanners or her. I don't really miss her.

# 3012. Question: Alinco DJ-X2T vs. Icom R-2

Newsgroup: rec.radio.scanner
Date: 2001-11-29 03:41:02 UTC
From: James Rubin <jimrubin@mindspring.com>
Message-ID: <jimrubin-A85B16.22410228112001@nntp.mindspring.com>
Source record: 56163

Greetings Fellow Scannerheads,

These days, it pays to be discrete when scanning mobile (it always was a good idea to be discrete, actually) and along those lines I am considering purchasing either the tiny Icom R-2 or the even tinier Alinco DJ-X2T handhelds to augment my collection. Does anyone on this list have experience pro or con with either of these units? I will be using it in an RF-rich urban enviornment for the most part, so intermod rejection is important and am primarily interested in VHF/UHF public service reception. I have read the specs on each, but am interested to see what anyone here has to say. Thanks in advance!
Cheers,
Jim

Tony,
You are not nuts if you can afford it and if you feel you are missing
out on the local action because of it. If you can follow what is
happening locally with your present set-up, then you might as well hold
out.
Cheers,
Jim

How did you get just a PO Box with the on-line ham call
sign look ups buckmaster and QRZ.
I'd like to do the same. I'm out of the country a lot and
would like QSLs to go to a PO Box.

thanks

# 3020. Re: Who thinks listening to Cordless phones is illegal

Here in Calif it is illegal to "intentionally" intercept a cordless phone call without the knowledge/permission of both parties (involved in the phone conversation), regardless if you share the information or not. This law is at the state level and is a misdemeanor. Note the quoted word above, it is in the Penal Code as such.......
Eric G.
one can have all the intelligence in the world, but with the lack of common sense, makes one just plain DUMB

Actually, it is my understanding that the ECPA was modified a couple of years ago to specifically include cordless telephones in the monitoring ban. Fortunately, there has been no requirement to block those frequencies in new scanners since the same frequencies are used for many Part 15 devices. If I can find a link, I'll post it.

Here is a link to the StrongSignals website for Rich's New User FAQS page.

http://strongsignals.net/access/content/new_user.html#SEC10

Click on the What's Illegal faq, and it states that Federal law makes it
illegal to:

~4. Listen to transmissions relating to the following services :
cellular phones
cordless phones
~etc.

Please go to the link to read the full text.

Again, someone is quoting a private website for legal fact. Any cop or lawyer knows you should only consult the actual government code. I can find websites that say Kennedy was killed by the CIA, that Apollo never landed on the moon and that Bigfoot walks the Pacific Northwest but that does not make it true. Give me a state or federal law and I'll believe you.

> information
> http://www.grove-ent.com/nasa.html

Grove has too many frequencies! If you put all theirs in your scanner you would miss most of the good stuff as your scanner would be spinning its wheels to get back to an active frequency. I have tired their list before and found too many frequencies they list are not relevant to the shuttle launch.

George's page www.MilAirComms.com has the good relevant frequencies in bold. George had his list on another website during another launch, I used his and found it much more useful.

It appears that George has been to launches and knows more of what is interesting to listen to. It appears Grove has never been in the launch area and just publishes frequencies licensed to NASA.

My Thoughts,
Bill

Canadian prices too expensive.

Try JAVIATION in the UK.

BANDERCOM in Denmark

NEVADA RADIO in the UK

BANDERCOM is currently having it's annual Xmas sale, prices real good and service, as with all the above, is great.

Pro 43 Scanner for Sale

- Overall in nice condition (8 out of 10)
- Keypad seems to be new
- Some scratches on inside of lens (outer perimeter) which
does not at all affect the view of the display.
- Unit has been modified (50-88) (868-896)

$200 or best offer

# 3045. Re: f.s. MINT pro 2022 with full true cellular coverage in 30khz steps 165.00US shipped

Newsgroup: rec.radio.scanner
Date: 2001-11-29 20:35:14 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10111291332080.21022-100000@srv1.calcna.ab.ca>
Source record: 56099

I am asking this for information only, as I am not really in the market for such a scanner at present.

Does the "cellular coverage" feature mentioned below mean that you can actually listen in on cell phones? There is a difference between a scanner that receives in the cellular bands and one that can get CDMA, DSS, etc. signals. What types of cell systems (if any) can you get with a scanner that searches or scans in 30 kHz steps? Does the Pro 2022 scanner have a variable step rate?

Thanks in advance,

Ian Douglas

Ian, I suspect this has more to do with your scanner, and less to do with Calgary. I have copied this followup to rec.radio.scanner, in the hopes that someone there can assist you.

Best regards,
Dan.

You all know the specs and if you don't, look it up. I took this in on a partial trade and don't need it. I already have a general coverage reciever/transmiter. This is in brand new condition cosmeticly and electronicly. Comes with all the docs, box and everything just like it just came from the store.

Price: $250 shipped COD, Prepay or PayPal.

Check this:
(4)
(b)
(ii) if the communication is the radio portion of a cellular
telephone communication, a cordless telephone communication that is
transmitted between the cordless telephone handset and the base
unit, a public land mobile radio service communication or a paging
service communication, the offender shall be fined under this title.

Which is from this:
http://frwebgate5.access.gpo.gov/cgi-bin/waisgate.cgi?WAISdocID=07612613439+7+0+0&WAISaction=retrieve

I USE a 780XLT trunk tracker. with a good outdoor antenna it gets the signals, I really dont see whats the point in spending 1000+ on a IC8500 when the IC8500 sucks for HF compared to the IC-75 reciever excells in HF monitoring for about 530 dollars

your best bet is a IC-75 for the .1 to 60Mhz reception (VHF-lo) is covered for interesting millitary skip and other communications about 530 dollars

the 780XLT for 60-1240 range. since the police etc.. is now trunked you can listen to it (unless it is digital) I use my 780 for AM aircraft band listening and I am quite satisfied with its performance using a 102inch antenna for that band.

so for under 1000 you will get a nice range

# 3055. Re: f.s. MINT pro 2022 with full true cellular coverage in 30khzsteps 165.00US shipped

Newsgroup: rec.radio.scanner

In short. When someone says they have a cell capable scanner with 30k steps. Like this one. The older analog 800 Mhz cell phones used 30k steps. each channel was 30Khz higher or lower then the other channel. Whenever you see this. it is for analog cells only on 800.

Dev

Really? I see a loophole. The signal transmitted from handset to base
is only the voice from the handset. The signal from base to handset is
the one you want to listen to! I guess that would be legal, right?

This may be more of a Railfan question but I was hoping some fellow listeners here might be able to help. I am new to the monitoring of Railroad Traffic and am rapidly getting familiar to the railroads operating in the Northeastern Illinois area. I know about Bryn Mawr, DeVal, Shermer, Valley... KO ... but have been hearing alot of reference to Mileposts or Milemarkers. Is there a source on the Internet or elsewhere that would have maps that will include the blocks and mile points or a cross reference to the formentioned and other blocks and their corresponding mile posts. Specifically I have been hearing alot on UP -- Kenosha , Sub, Harvard Sub, Milwaukee Sub and Geneva(?) Sub. WC -- DeVal to Antioch etc. and CP -- former CMSP&P North from Shermer to Roundout. I have been hearing alot of BNSF and the yards at Proviso and Bensenville but haven't quite nailed the frequencies to them down yet. Thanks for any help.

Actually the R8500 is excellent below 30mhz.
The R8500 is very very good throughout it's 0 - 2Ghz
receive range. It's built like know other radio I've tried when selectivity
and image rejection is a concern.

I own an R75 also and they are both excellent.

>all you hear is inane conversations nothing interesting
>
I agree with the statement "whats the big deal". However I do have a pre-ban scanner (PRO-2006) and from time to time see how much is still analog. I agree, there is a lot of digital however you would be suprised to find TONS of analog still being used. However there isn't anything interesting to listen to, evertime you find a "good" conversations a few minutes later you loose it as one of the callers traveled to a different Cell site.

I've had more fun with Cordless phones! They never move and its fun trying to guess which neightbor it is you're hearing. But then again, unless you lock into a "good" conversation who wants to hear about "Aunt Janes vacation at Disney World?".

It amazes me how many messages you see on Newsgroups and email-scanner lists where people ask "Is there a mode for the XXX-XXXX scanner"..... In buying a new scanner that is the LAST thing from my mind!

Close, but no cigar.

It doesn't say "from the handset to the base unit", it says "between the
handset and the base unit".

## 3065. Re: apologies

Actually, there is nothing in the charter that forbids posting a
pertinant ad, however, some ISP's these days don't allow such unless
the charter specifically states such is allowed (which wasn't typical
of most ISP AUP's when many newsgroups were created, so people didn't
think of it when many charters were written :P )

>
>
>What charter?

from ftp.isc.org:

Subject: newgroup rec.radio.scanner
Approved: tale@uunet.uu.net
Sender: tale@uunet.uu.net (David C Lawrence)
Organization: UUNET Technologies, Inc
Date: Tue, 31 Aug 1993 14:30:18 GMT
Message-ID: <CCMoAI.266@uunet.uu.net>
Lines: 16
Xref: uunet control:707675

rec.radio.scanner is an unmoderated newsgroup which passed its vote
for
creation by 298:24 as reported in news.announce.newgroups on 25 Aug
1993.

For your newsgroups file:
rec.radio.scanner "Utility" broadcasting traffic above 30 MHz.

The charter, culled from the call for votes:

rec.radio.scanner is a newsgroup for discussion about "utility"
traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio
and broadcast satellite-related material doesn't belong to
rec.radio.scanner because they have their own newsgroups. This

newsgroup replaces alt.radio.scanner. In addition, the
rec.radio.scanner will be gatewayed to a mailing list which will be
created as soon as possible after newsgroup creation, as there are
many who do not have access to USENET news.

The best way to work both HF, you know short wave radio, either
broadcast or utilities and
police calls on VHF UHF 800/900 MHZ is to purchases two (2) separate
radios.
One HF the other a scanner.
A PRO 94, PRO 92, PRO 2067 or Uniden BC 780 XLT would be a great
scanner,
and for HF a Radio Shack AM/FM-SSB Short wave radio would do, with an
antenna tuner and
forty feet of copper wire out side your monitoring post.

Yeah, uniden has really crap support on their website, they spend lots of money to make it look flashy, but with all the bells and whistles they still have most manuals missing, and promised to get them online for years but never have....
But you can download the adobe pdf file manual for the bc350 manual, the operation instructions are the same, the only difference is the 800 band.

Hello:

I live in Milford, Mich., recently I have been picking up some new talkgroups on my BC895XLT, from the Oakland County trunked radio system. They are: 28400, 28272, 28448, and 28464.
Last night two units talking on 28400 and they were talking about a traffic stop at Walnut Lake Road and Halsted, and one of the cars was going to check up on the officer to make sure he was ok.

The 28272 and 28448, radio repair was doing a 5 count and testing some radios. Anbody got a clue as to who this might be?

Thanks,

Ken

OK for those out there who are learning-impaired, or otherwise incapable of conducting a web search, check this link:

http://www4.law.cornell.edu/uscode/18/ch119.html

UNITED STATES CODE
TITLE 18 - CRIMES AND CRIMINAL PROCEDURE
PART I - CRIMES
CHAPTER 119 - WIRE AND ELECTRONIC COMMUNICATIONS INTERCEPTION AND INTERCEPTION OF ORAL COMMUNICATIONS

Sec. 2511. Interception and disclosure of wire, oral, or electronic communications prohibited

(1) Except as otherwise specifically provided in this chapter any person who -
(a) intentionally intercepts, endeavors to intercept, or procures any other person to intercept or endeavor to intercept, any wire, oral, or electronic communication;
(b) intentionally uses, endeavors to use, or procures any other person to use or endeavor to use any electronic, mechanical, or other device to intercept any oral communication when -
(i) such device is affixed to, or otherwise transmits a signal through, a wire, cable, or other like connection used in wire communication; or
(ii) such device transmits communications by radio, or interferes with the transmission of such communication; or
(iii) such person knows, or has reason to know, that such device or any component thereof has been sent through the mail or transported in interstate or foreign commerce; or
(iv) such use or endeavor to use (A) takes place on the premises of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or
(B) obtains or is for the purpose of obtaining information relating to the operations of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or
(v) such person acts in the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States;
(c) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this

subsection;
(d) intentionally uses, or endeavors to use, the contents of
any wire, oral, or electronic communication, knowing or having
reason to know that the information was obtained through the
interception of a wire, oral, or electronic communication in
violation of this subsection; or
(e)
(i) intentionally discloses, or endeavors to disclose, to
any other person the contents of any wire, oral, or electronic
communication, intercepted by means authorized by sections
2511(2)(a)(ii), 2511(2)(b)-(c), 2511(2)(e), 2516, and 2518 of
this chapter, (ii) knowing or having reason to know that the
information was obtained through the interception of such a
communication in connection with a criminal investigation, (iii)
having obtained or received the information in connection with a
criminal investigation, and (iv) with intent to improperly
obstruct, impede, or interfere with a duly authorized criminal
investigation, shall be punished as provided in subsection (4) or shall be
subject to suit as provided in subsection (5).

Note, the law used to read:

Sec. 2510. Definitions

As used in this chapter -
(1) ''wire communication'' means any aural transfer made in whole or in part
through the use of facilities for the transmission of communications by the
aid of wire, cable, or other like connection between the point of origin and
the point of reception (including the use of such connection in a switching
station) furnished or operated by any person engaged in providing or
operating such facilities for the transmission of interstate or foreign
communications or communications affecting interstate or foreign commerce
and such term includes any electronic storage of such communication, but
such term does not include the radio portion of a cordless telephone
communication that is transmitted between the cordless telephone handset and
the base unit;

But it now reads:

Sec. 2510. Definitions
US Code as of: 01/02/01

As used in this chapter -

(1) ''wire communication'' means any aural transfer made in
whole or in part through the use of facilities for the
transmission of communications by the aid of wire, cable, or
other like connection between the point of origin and the point
of reception (including the use of such connection in a switching
station) furnished or operated by any person engaged in providing
or operating such facilities for the transmission of interstate
or foreign communications or communications affecting interstate

or foreign commerce and such term includes any electronic storage
of such communication;

(12) ''electronic communication'' means any transfer of signs,
signals, writing, images, sounds, data, or intelligence of any
nature transmitted in whole or in part by a wire, radio,
electromagnetic, photoelectronic or photooptical system that
affects interstate or foreign commerce, but does not include -
(A) any wire or oral communication;
(B) any communication made through a tone-only paging device;
(C) any communication from a tracking device (as defined in
section 3117 of this title); or
(D) electronic funds transfer information stored by a
financial institution in a communications system used for the
electronic storage and transfer of funds;

Note the deletion of the part at the end of (1) wire communication, that says: "but such term does not include the radio portion of a cordless telephone communication that is transmitted between the cordless telephone handset and the base unit;". In fact, reading the amended law at the Cornell website shows that all references to excluding cordless phones have been deleted. Given the change to the defintion of wire communication, then (12), electronic communication, which clearly references radio, would apply.

Other parts of the code provide the exception which makes scanning governmental agencies legal. I won't go into that, read it for yourself.

The up-to-date section was taken from the link given above, which is Cornell University's Legal Information Institute wensite. I trust that is good enough.

Mark S.

I said I wasn't going to look this up again, but certain self-appointed web "experts" made me decide to do so, if only to combat the spread of their ignorance.

>What could be wrong?

If you can find the backlight, it will work. I think there are just a couple of wires to solder. The problem is finding one. Radio Shack had sold them for $10, but they may be out of stock. The scanner was made in the early 90s. Try their web site, or look in some place like Al Brand's Yellow Pages (is that still being published?) for one that is junked and use it for parts. I would not hold out too much hope, though. I've got a PRO-2004 that is just about shot, too. OTOH, I have a PRO-2003 from 1983 that is still bright. It's a neon bulb display, though, and causes a lot of hash.

I'll help cut to the chase...

US Code
Title 18
Chapter 119

Section 2510: Definitions

As used in this chapter --

...

(12) "electronic communication" means any transfer of signs, signals,
writing, images, sounds, data, or intelligence of any nature transmitted
in whole or in part by a wire, radio, electromagnetic, photoelectronic or
photooptical system that affects interstate or foreign commerce, but does
not include--

(A) the radio portion of a cordless telephone communication that is
transmitted between the cordless telephone handset and the base unit;

---

Section 2511: Interception and disclosure of wire, oral, or electronic
communications prohibited

(1) Except as otherwise specifically provided in this chapter any
person who--

(a) intentionally intercepts, endeavors to intercept, or procures any
other person to intercept or endeavor to intercept, any wire, oral, or
electronic communication;

(b) intentionally uses, endeavors to use, or procures any other person
to use or endeavor to use any electronic, mechanical, or other device to
intercept any oral communication...

(c) intentionally discloses, or endeavors to disclose, to any other
person the contents of any wire, oral, or electronic communication,
knowing or having reason to know that the information was obtained through
the interception of a wire, oral, or electronic communication in violation
of this subsection; or

(d) intentionally uses, or endeavors to use, the contents of any wire,
oral, or electronic communication, knowing or having reason to know that

the information was obtained through the interception of a wire, oral, or
electronic communication in violation of this subsection;

shall be punished as provided in subsection (4) or shall be subject to
suit as provided in subsection (5).

---

This clearly points out, even to the most dense of individuals, that it
is illegal under US Federal law to intercept, try to intercept, disclose
the content of or knowingly accept contents derived from illegal interception
any communications from a cordless telephone. Additional passages to Section
2511 also protect cellular phones, encrypted, scrambled, paging, etc. services.

For those desiring to read the full content of the ECPA, they can go here:
http://www.eff.org/Legal/ecpa.law
which is the legal portion of the Electronic Frontier Foundation web site
(but I guess that doesn't count because it's on a web site and they likely
have other material which states that aliens killed JFK, etc.)

For those wishing to read the contents from an official US federal governemt
source, you can go to http://thomas.loc.gov/ and do your own research.

Hello,

I would like to construct an antenna for my UHF handheld.. aprox 400-500 mhz frequency range.

Could someone please give me some tips on how to go about this? What other details should I consider other than sticking a length of wire into the end of a TNC plug.

Cheers
Sam

Jim,

Thanks for the input. I agree with what you have said. However I am looking to add something new to my collection of radio gear. I already own 2 Shortwave receivers, 2 HF Rigs, 2 scanners, 2 VHF/UHF and 2 Hand Held VHF/UHF radios. But often I need to get away from the radio but am expecting to hear from someone on particular frequency. Usually local to my location. This is why I thought it would be nice to be able to have a VHF and HF portable in a hand held unit. I realize the antenna would be VERY inefficient, however I am hopping that it will at least allow me to hear the other party so that I might get back to the shack or mobile and hook up for a QSO.

Paul

Voice Frequency Inversion

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

I've done this a number of times with other equipment and its a great idea. Adds a nice bright but not hard to look at lighting effect and they do virtuallty last forever. You may have to do some small additions to drop the voltage or whatever depending on the radio, but hell just find a constant source and yer all good :) Just depends on how anal you are heh.. I think radio shack still sells the EL, but they've gone from around $10 up to last time i bought one $35 a peice.

Also, anyone that has a blown up/dead 2006 they wanna sell for parts let me know, i just fixed mine after having it sit forever only to have an angry female throw it out the appartment window and have it hit the ground 3 floors bellow and not survive. I could use parts :) Its either that or buy a new scanner and god knows i'd miss this old thing :)

In either country, if you make it obvious you listened in on a
conversation and do anything with the info that hurts the people, you're in
trouble (if nothing else you can be sued for damages by the people whose info
you spill). This area of civil law applies whether you use a scanner or
overhear a conversation at the next table in a McDonalds.

finally. How many times have we said this over and over. The only time US Canadians will be in trouble is if your neighbor heard us talk about them. If someone does not want to be listened to. GET and damn landline. hehe. If you are in the US. Even though it IS illegal to listen. Some state laws are different. Anyways. Don't blabb to everyone that you are listening to the frequencies and 90% change no one will know.

Go to Radio Shack and buy a TNC or BNC to RCA Plug adapter. Also buy a package of solderable RCA Plugs. Solder an appropriate length of wire into one of the RCA Plugs, plug it into the TNC/BNC adapter, plug said adapter into the radio, and you're on your way.

What would be an appropriate length of wire?
Is the centre conductor onely used on the TNC plug to connect the antenna?

Thanks

I have no idea what they are, but I will plug them into the ID scan on
my online scanner at
http://www.michnews.net/scanner/michigan.asp
and try to figure out who they are.

You might want to keep an eye on Les Butler's site at:
http://my.voyager.net/~lbutler/oakland.txt
(I just checked...he doen't currently list those groups).

BTW...I see you have a BC895XLT. If you're interested, I have a FREE
programming and control utility for BC895XLT's (along with BC245XLT,
BC780XLT, and PRO-2052 scanners) at
http://www.michnews.net/scanner/software.asp

It doesn't have a gazillion features like the $70+ programs do, but it
does make it A WHOLE LOT easier to backup, program, and "Computer
Keyboard" control your scanner. And. like I said, it's free (and
always will be...even after I add -half- a gazillion features.

Note: I hope to have the next release in approx. 2 weeks - programmed
using the BCX Basic to C converter and then hand-optimized to save
time and resources over Visual Basic.

# 3117. Minor MVT-9000 problem

Newsgroup: rec.radio.scanner
Date: 2001-11-30 23:41:42 UTC
From: fcathell@aol.com
Message-ID: <20011130184142.14838.00000094@mb-ci.aol.com>
Source record: 56065

I have a Yupi MVT-9000 in which the zero beat frequency of any carrier is 250 Hz above the real freq. when in either USB or LSB modes. The freq. seems to be correct when in the AM narrow mode. Is there an easy way to calibrate this correctly for the SSB mode?

Thanks,

Frank

Pidgeonpost,

If you want to be able to use a computer to program your
scanner go with the AR8000. I f you don't care about
computer control etc. then go with a brand new Yupi 7100.

monty

One possible place is the TerraServer. An example is shown below:

http://terraserver.homeadvisor.msn.com/image.asp?S=10&T=1&X=2829&Y=19514&Z=16&W=2

On the left hand side, they have demographics, school, and crime.

Might not be what you are looking for, but gets close.

Good luck.

Message-ID: <3C082B14.64E3BC11@worldnet.att.net>
Source record: 56068

Length of wire:

Wire should be 1/4 wavelength. This is approximately

7500 cm / frequency in Mhz.

I.e., for 750 Mhz, the length would be 10 cm, or 3.9 inches.

Such a wire would be connected only to the center pin of the plug.

If a ground plane, or an array of several radials, is desired, it
would be connected to the outer conductor. These are typically not
used.

Hi folks

I'm looking to buy a new handheld scanner - it doesn't need to have all the bells and whistles under the sun, my main priorities are a low number of birdies/unusable frequencies, a wide range (say 500kHz up to 1.2GHz or so) and decent sound quality. Would be nice if it wasn't enormous as well, my MVT-7100 is like a brick. What would you guys recommend?

R

# 3124. Question RE: 800mhz GTE Airfones

Newsgroup: rec.radio.scanner
Date: 2001-12-01 01:52:43 UTC
From: joepwalker1@cs.com
Message-ID: <20011130205243.15569.00000082@mb-mp.news.cs.com>
Source record: 56072

I had a couple of questions regarding monitoring the GTE 800mhz airfones being utilized onboard commercial aircraft.

(1) I've read that the transmissions are AM - Are they encrypted? Has anyone had any luck monitoring any of the transmissions?

(2) Anyone have a list of air carriers using the GTE airfones?

(3) I understand that when monitoring the conversations, they are one-way (ie: ground-to-air freq & air-to-ground). Would a 800mhz beam aimed at aircrafts passing overhead enhance the chances of hearing anything from the aircraft? Or would a beam even be needed -- I know when monitoring/decoding ACARS, the signals almost beat the scanner to death there are so many out there. Which brings up another point -- are passengers utilizing the phones very much? I know whenever I've flown (not to often), I've only seen the phones used maybe once or twice.

Thanks in advance

Joe

most CG stations have 'high site' antennas that they use for
communicating to 20-25 miles offshore. at CG station sandy hook, we
have no problem contacting small fishing vessels out that far.

The backlight on mine went half out -- half of the display is darker than the other side -- after only about a year of use. Guess I'll have to order another bulb from Uniden and put it in. :-(

Mike

## 3139. Looking at buying a mobile scanner

Newsgroup: rec.radio.scanner
Date: 2001-12-01 05:36:05 UTC
From: Phil <plicht@optonline.com>

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am looking at buying a new mobile/base scanner that will allow me some freedom in programing my own frequencies. i am trying to stay away from anything that is primarily going to use preset frequencies stored in memory for scanning. from what i understand, some bearcat scanners are set up that way. maybe i am wrong. if anybody can give me some feedback as to what would be a good purchase to make. i am looking to stay under $500 which i think won't be a problem. i am kind of leaning towards the bearcat 780xlt. anybody have any feedback on that unit?

thanks for the help.
phil

## 3140. Re: help: making a UHF portable antenna

Newsgroup: rec.radio.scanner

Thanks for the help Walter :)

If I were to go further into antenna design, how would I go about getting
further rx/tx range?

# 3142. ARNewsline 1268 - Nov 30 2001

Newsgroup: rec.radio.scanner
Date: 2001-12-01 06:42:50 UTC
From: radionews@aol.com

Source record: 56088

AMATEUR RADIO NEWSLINE(tm) REPORT #1268 - NOV 30, 2001

Amateur Radio Newsline report number 1268 with a release date of
Friday, November 30th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. A enforcement issue involving a contest station and lots of news on ham radio in space are first on this weeks Amateur Radio Newsline report number 1268 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: SPLIT FREQUENCY OPERATION BRINGS INTERFERENCE WARNING NOTICE FROM THE FCC

If you are operating split frequency and another ham calls you on the phone to tell you that you are interfering with his QSO, listen to what he or she says. It could save you from getting a citation from the FCC. This advice comes from many operators after the FCC’s chief ham radio rules enforcer Riley Hollingsworth says he's letting stand a Warning Notice he sent to a Pennsylvania radio amateur after receiving allegations of deliberate interference that took place during a contest.

--
Hollingsworth: “We reaffirmed our Warning Letter to Joseph Brue, K3NM, of Pennsylvania in the case of interference he caused when operating split on 40 meters during a recent contest.”
--

The background on this story is quite complicated and will take a few minutes to explain it in detail. This is because it is very important to any ham who operates spit frequency in a contest or while chasing D-X.

The issues involves Joseph Brue, K3NM. He was sent the Warning Notice on September 12th after a Louisiana ham named John King, K5PGW, officially complained about a September 9 incident on 40 meter SSB. King claims that K3NM was operating split mode on during the Worked All Europe Contest. King says that during part of that contest period he was in QSO with Roy Ezell, K9ROY, in Kentucky when K3NM came on frequency. King says that K3NM did not bother to ask if the frequency was clear before beginning to call C-Q contest.

King says that he and K9ROY attempted to contact the operator at K3NM and alert him about the QRM. Unfortunately. he was listening outside the US phone band. Since neither King or Ezell could reach K3NM by radio, K9ROY reverted to an older form of communication. He telephoned Brue, to let him know that his station was interfering with his contact and asking him to move. In fact, King

claims that there were two calls made to K3NM but that station never did change frequency.

And here is where it all gets a bit more complex. You see, the person operating K3NM’s station at the time of the incident was not Joseph Brue. Rather a guest in the person of the Matt Vanni, callsign LU9AY. And it was Vanni who first responded to the FCC. He said that he could not hear K5PGW or K9ROY. So, even though he acknowledged the phone calls, he continued operating the station on the same transmit frequency. He also told the FCC that he always monitors his transmit frequency whenever he operates split frequency. Brue later confirmed Vanni's version of what happened to the FCC. But he also acknowledged receiving the two telephone calls from the complaining hams.

So why issue a warning letter? Hollingsworth explains it in the reaffirmation message itself. His key words to Brue are these:

"The fact remains, however, that both you and Vanni had notice, directly from the complainant operator in two separate telephone calls, that your station was indeed interfering with specific ongoing communications."

Hollingsworth added that based on the phone calls from Ezell that it was not good Amateur practice for the K3NM operators to ignore the complainant and continue operating the station. At least not without a good faith attempt at compromise or taking corrective action.

And the bottom line for all hams may be what Hollingsworth wrote in the original September 12th letter to Brue. There he said that Amateurs are responsible for taking steps to make sure they do not interfere with ongoing communications, and contest participants have no greater rights to any specific frequency than other hams. (RAIN, FCC)

**

RADIO LAW: TACOMA BANS NON FCC CERTIFIED CB GEAR

Tacoma Washington may be the first city to prohibit Class D 11 meter C-B operators from using non-FCC certified transmitting equipment. Adopted last September 12th but only now becoming widely known, Tacoma City Ordinance 26851 amends Chapter 8.38 of their Municipal Code in two ways. First is Section 8.38.010 which directly prohibits use of non-approved radio equipment by CB’ers. And if a CB’er breaks the new law he or she is subject to Section

8.38.020. This makes using such a radio a misdemeanor punishable to a fine of up to $500, and/or up to 6 month imprisonment.

Tacoma enacted Ordinance 26851 based on an earlier amendment to the Communications Act of 1934, as amended, which was adopted by Congress a couple of years ago. As this was a Congressional action, not an FCC action, any challenges by C-B operators to the new Tacoma local law would have to go through the federal courts. As far as we can determine, the new law is carefully crafted to affect only C-B operators and no other radio operators in the Tacoma area. (Various news sources)

**

LEGAL ISSUES: ANTENNA LAWS WILL BITE SOUTH AFRICAN AMATEURS

Ham radio operators in South Africa have something new to worry about. Expensive antenna regulation and added costs for evaluating an antenna installation. Q-News Graham Kemp has the details:

--

Following a lecture on Antenna regulation and planning, South African Clubs in many provinces have been urged to meet and appoint a mutual provincial representative to work in this field.

Tim Ellam, a Telecommunications lawyer, sketched the situation in Canada but the hams in ZS land soon discovered they are worse off! Amateurs there could soon be paying in access of Rand 10 000 to have a scooping study done before submitting plans for approval.

That is the reason the SARL installed the CPAS committee, a body with members representing each province to monitor development so that timely intervention can put the case for Amateur Radio Towers. This was successfully accomplished in the KwaZulu-Natal.

CPAS now has KZN and Eastern Cape and Western Cape represented. Will the rest of the country wait till it is too late?

--

According to Kemp, Tim Ellam put forward many useful suggestions and dealt extensively the South African situation. For our listeners in South Africa, C.P.A.S. itself is on e-mail at cpas@intekom.co.za (SARL via Q-News)

**

BREAK 1

This is ham radio news coming to you from the United States of America. we are the Amateur Radio Newsline, heard on great bulletin stations around the world, including the 145.21 MHz repeater serving Andover Minnesota.

(5 sec pause here)

**

HAM RADIO IN SPACE: EXPEDITION 4 CREW ON ITS WAY TO THE ISS

A new crew is headed to the International Space Station and could be there by the time this newscast goes to air. This time a Russian is in command of two Americans and all three have an interest in ham radio. Amateur Radio Newsline’s Roy Neal, K6DUE, gives us some insight into the Expedition 4 crew and what to expect while they are on board the I-S-S.

--

The new crew board the International Space Station plan to work in some hamming between work sessions of their sixteen hour daily schedule. Astronauts Dan Bursch and Carl Walz, both Flight Engineers are KD5PNU and KC5TIE and their commander, Cosmonaut Yuri Onufrienko once spent 193 days on the Mir Space

Station and was on the radio a lot.

They plan to use NA1SS, the amateur station on board the ISS, whenever they get a chance. If they come close to the records set by Frank Culbertson and Susan Helms of the last two station crews, it will be surprising. That's because they have a very ambitious work schedule.

Among other things, they are charged with delivering and installing a huge 356 foot long girder-like truss. They plan at least eight space walks, two of which will be used to install new ham radio antennas outside the space stations crew quarters.

Add a few such things as changing out the stations command and control computers with new, solid state memory units and playing host to two visiting shuttle flights and a Russian Progress taxi mission, plus more than 400 hours of carrying out scientific experiments, and you begin to get the idea. When the Expedition 4 crew comes back to Earth next May..they'll need a rest. Meanwhile, we hams look forward to at least a few contacts with them on 2 meters, via NA1SS, the ham radio station on board.

For the Amateur Radio Newsline, I'm Roy Neal. K6DUE.

--

A new crew is not the only ham radio change taking place on board the International Space Station. According to ARISS Chairman Frank Bauer, KA3HDO the new ham radio antenna system mentioned in Roy's report has been approved for flight and manifested to be flown on the STS-108 flight. Once installed around the perimeter of the Russian Service Module early next year, the new I-S-S ham radio antennas will cover the H-F, VHF, UHF and microwave bands up to 2.4 Gigahertz.

**

HAM RADIO IN SPACE: AMSAT THANKS DONAHUE

Newly elected ARRL Southeastern Division Vice Director Sandy Donahue, W4RU, has received his first award. In fact he got it before the ballots had even been counted.

The recognition came at the recent 2001 AMSAT Symposium awards which included a presentation to in grateful appreciation for work as the ARRL Liaison for the event. W4RU's dedicated service and hard work in this role was also well noted.

**

CONVENTIONS AND HAMFESTS: RSGB STOPS ORGANIZING TRADE SHOWS

The Radio Society of Great Britain says that its no longer going to organize ham radio trade shows. Instead it will participate at conventions organized on a local level. That a major change in policy as we hear from Jeramy Boot, G4NJH:

--

With the continuing success of the RSGB Regional organization it is becoming possible for the RSGB to have a presence at an increasing number of amateur radio events, rallies and trade shows around the country. In view of this enhanced activity, the RSGB has decided that it will no longer itself organize amateur radio trade shows.

The RSGB believes that there is a need for more convention-style meetings where radio amateurs can discuss new techniques and other innovations in seminar-like events and that such events represent a better use of the RSGB's resources.

Jeramy Boot, G4NJH.

--

In other words, the moneys saved can go into other projects aimed at furthering the cause of ham radio in the U-K. (RSGB)

**

CONVENTIONS AND HAMFESTS: GREENFIELD INDIANA

Things are a lot better here in the USA where there’s a hamfest almost every weekend. And Brad Hewson KB9VZL tells Amateur Radio Newsline that the Hancock County Amateur Radio Club Hamfest December 9th from 8 am to 2 p.m. It all happens at the Greenfield Indiana at the Greenfield Central High School with talk-in on the 145.33 MHz W9ATG repeater. For more information please contact Brad by e-mail to kb9vzl@excite.com. (KB9VZL)

**

CONVENTIONS AND HAMFESTS: HAM RADIO UNIVERSITY 2002

New Yorkers attention. Mark down Sunday, January 20, 2002, for the next Ham Radio University session. The first 2002 session will be a part of the ARRL’s New York City and Long Island Section Convention. Sponsored by the Great South Bay Amateur Radio Club, both events will be held at the Babylon Town Hall Annex in North Babylon, Long Island. Ham Radio University 2002 will be a technical education forum featuring twenty one-hour presentations along with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be hands on, with many demonstrations including emergency communications. For more information, contact Chairman Phil Lewis N2MUN or New York City Long Island Section Manager George Tranos, N2GA at their callbook address. (K2DO)

**

RADIO AT WAR: SHORTWAVE RETURNS TO AFGHANISTAN

A new shortwave radio station is broadcasting to Afghanistan. According to the Media Network e-newsletter, the arrival of Radio Voice of Afghanistan seemed to surprise just about everyone except those behind it. Who are they? As of airtime, they have chosen not to reveal their identity.

It was Glenn Hauser's DX Listening Digest that broke the news to the world. Then a Mexican listener to Radio Netherlands Spanish service, Adolfo Murrieta González, claimed credit for the first logging on November 17th. Clandestine

Radio Watch was soon on the chase as well with Takuya Hirayama of it's Japan Bureau listening in. Hirayama understands Pashto and Dari. He wrote a summary of the broadcast on November 22nd. Read more in the Media Network Afghanistan media dossier at http://www.rnw.nl/realradio/html/afghanistan.html. If you want to listen to the audio sample go to http://www.omroep.nl/cgi-bin/streams?/rnw/medianetwork/rvoa011123.rm (Media Network)

**

RADIO IN THE USA: CLEAR CHANNEL BUYING ACKERLY

The United States largest radio broadcaster, is getting a lot bigger. This as Clear Channel Communications Inc., announces that it is buying the Ackerley Group, which owns billboards and other outdoor advertising as well as radio and television stations.

Clear Channel, operates about 1,180 radio and 18 TV stations in the United States, already is involved in events promotion and billboard advertising. It is paying about $500 million in stock to acquire Ackerly. (Broadcast Weekly)

**

NOAA WEATHER RADIO: CRAIG AND DONNA NOT MUCH BETTER THAN PERFECT PAUL

Two well respected broadcasters who also happen to be ham radio operators have voiced their opinions on the new voices tapped by the National Weather Service to replace the not so perfect -- Perfect Paul. For those not aware, Perfect Paul is the nickname given to that mechanical sounding computerized voice that currently voices NOAA Weather Radio. Take a listen:

--
Perfect Paul Audio Here
--

The closest thing to it our world of Amateur Radio are the automated voices heard on many repeaters. You know, those announcements that say this is the W-A-3-such and such repeater. The ones that users are always complaining about.

In the case of Perfect Paul, the NOAA Radio received so many complaints that he will soon be replaced by two new and far less computer sounding voices named Craig and Donna. This came after months of evaluating voice technologies and receiving public input, including over 19,000 Internet survey comments. Based on this input, NOAA awarded Siemens Information and Communication Network a $633,615 contract for the voice improvement software product, known as Speechify. Siemens teamed with SpeechWorks International of Boston to provide software that combines phonetic sounds with natural language modeling. Heres a sample:

--
Audio Here
--

A lot better than Perfect Paul? Some say yes but Richard Rudman, W6TIA, is not that enthusiastic. Rudman is the chairman of the EAS National Advisory Committee and the Los Angeles County local emergency committee. He is quoted in the November 21st issue of the trade publication Radio World as saying he wished that the committee choosing the new voices for NOAA Weather Radio would have waited for something better to come along. W6TIA says that the new voices chosen are an improvement, but still have major shortcomings with regard to quality and inflection issues that bother him.

Also quoted in the Radio World article is Chris Boone, WB5ITT. He says that the voices still sound computer-like and canned. Boone says he can hear the digital artifacts in them and would not put them on a broadcast station. Even so, the computerized Craig and Donna would be a welcome change to the automatic I-D voices used on most ham radio repeaters today. (Radio World, NOAA, NWS, others)

BREAK 2

By telephone, satellite and the World Wide Web, we are the amateur Radio Newsline with links to the world at our only official website - www.arnewsline.org.

**

HAM RADIO ON THE BOOKSHELF: TUNE IN THE UNIVERSE

“Tune In The Universe” is a new book on CD-ROM by SETI League Director H. Paul Shuch, N6TX. The book is unique in that it is both interactive with the reader and because it can be read using any web browser. No special reader software is required.

Why a book now? N6TX tells Amateur Radio Newsline that its kind of overdue:

--
Shuch: “Ive been on the lecture circuit for SETI for the past seven years and everywhere I go people ask if I have a book about all of this. Well, we have a website but not everybody has an Internet connection and some other peoples download speeds are a bit slow. So I took the best material from seven years of running the SETI League and tried to put it together in one convenient place.”
--

And that’s exactly what Dr. Shuch has done. Called a ham radio operators guide to the search for extraterrestrial intelligence, the book is divided into six sections that cover every aspect of ham radio’s involvement in SETI as well as the ongoing search itself. Also included are a mix of photos and even some songs that Dr. Shuch says should educate as well as entertain. Why music you ask? N6TX says that its a fun way to learn about anything:

--

Shuch: “As any teacher knows, memory is enhanced and multiple learning styles are accommodated by invoking as many different sensory pathways as

possible. That is, we educators try to stimulate the students auditory, visual and tactile systems all at once to maximize the learning experience. Why do you think we are always writing on a chalk-board and asking you to take notes while we drone on in a monotone?

Somewhere along the line in my teaching career I figured out that music was another sensory pathway worth stimulating. And, just maybe would make my lectures a tad less monotonous. So I began introducing songs as learning aids.

--

Tune In The Universe" is published by the American Radio Relay League and is priced at under $25. For more information visit the League's website at www.arrl.org. More about the SETI League is also to be found in cyberspace. It's at www.setileague.org. (N6TX, SETI League, ARNewsline(tm))

**

HAM RADIO AND EDUCATION: FAR ANNOUNCES SCHOLARSHIPS

Speaking of education, the Foundation for Amateur Radio, in Washington, D.C. says that it plans to administer 62 scholarships for the 2002 through 2003 academic year. The foundation, which is made up of more than seventy-five Amateur Radio Clubs fully funds seven of these scholarships using the income from grants and its annual hamfest. The remaining fifty-five are administered without cost to the donors. For more information or an application, please contact the F-A-R Scholarships, PO Box 831, Riverdale, Maryland. The zipcode is 20783. You can also check the website at www.amateurradio-far.org (FAR elease)

**

HAM RADIO ON THE INTERNET: NEW FLYING HAMS REMAILER

Joe Della Barba, N3HGB says that he has started a new Internet mailing list for anyone interested in airmobile ham radio. In a web posting, Joe says that he has been operating 2 meter airmobile for years now and finds it to be lot of fun. Joe notes that A-P-R-S adds a whole new dimension to airmobile operations these days as well. To become a part of that discussion and lots more you sign up by sending an e-mail to cqairmobile-subscribe@yahoogroups.com. (CQAIRMOBILE)

**

INTERNATIONAL - CANADA: DISABLED EXAMS

On the international front, word that an Industry Canada document pertaining to the examination of disabled candidates will be ready for incorporation into rules by January 31, 2002. This document, based on a proposal from Radio Amateurs of Canada, will provide guidance to medical doctors when asked to justify an exemption for disabled candidates for the Canadian Amateur Radio examination process. (RAC)

**

INTERNATIONAL NEW ZEALAND: RADIO EDUCATION TRUST

Amateur Radio Newsline’s South Pacific Bureau correspondent Jim Meachan, ZL2BHF reports that a charitable foundation called the NZART Radioscience Education Trust, founded in January 1998 is taking root. Jim explains that the trust was formed to help and encourage persons wishing to further their education in the science of radio. ZL2BHF says that the trust is financed from income produced from invested donations. More information can be obtained from the NZART web page at http://www.nzart.org.nz/nzart/nzart/trustweb.html (NZART)

**

DX

In the DX department, K5OE reports that OM5CM in the Slovak Republic has been active the AMSAT Oscar 10 satellite. Also, ZS2ACP in South Africa recently created a weekend pile-up on
AO-40, operating when both Europe and North America were in his window. (GB2RS)

Meantime, a little bit lower in frequency, well, take a listen:

--
6 m audio here
--

That was N0JK portable HC8 working the world the weekend of November 24th. And he was not the only D-X being heard. The VHF Reflector was loaded with reports from around the world of unexpected F 2 openings as more and more hams buy radio gear and discover the magic of the Magic Band. (VHF Reflector - audio supplied by KC6WFS)

And an Internet posting from the ARRL’s Wayne Mills N7NG says that an operation from war torn Afghanistan has been approved for DXCC credit. Mills post says that The DXCC Desk has received acceptable documentation for YA5T operated by ON4WW, ON6TT, S53R or SM7PKK. The documentation is for QSOs made November 20, 2001 and after. No other callsigns or operations have been approved as of this date. (VHF Reflector, OPDX, other DX remailers)

**

THAT FINAL ITEM: A REPEATER CONTACT CONTEST?

And finally this week, while we here in the United States frown on contesters interfering with repeater contacts, down-under its a different story. Can you believe that Australia has a contest where only contacts made over repeaters count toward the final score? Well they do and Q-News Graham Kemp, VK4BB, is back again with the details:

--

Westlakes unique CQ Repeater Contest where amateurs are encouraged to put a little life into usually quiet repeaters. The aim of all contests is to promote good will between amateurs and to encourage on air activity. The big difference

with this CQ Repeater contest is that all contacts MUST be made on repeaters.

The rules have been even simpler. Contest numbers do not have to be exchanged - just keep a record of the station spoken to and on which repeater and at what time the contact was made.

Contest Period is from 0001 local from 1st of January 2002 to 2359 local on the 7th January. The bands are 10 Meters, 6 Meters, 2 Meters and 70 centimeters. The mode is FM only ad scoring is 1 point for each contact. It doesn't get any simpler than that!

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB, of Q-News Australia.
--

Could such a contest be successful in North America? Maybe, but we do not know of any repeater owners who really want to find out. (Q-News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address
is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at
Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio 45401 or by completing the convenient e-form on the web at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying God Bless America, 73, and we thank you for listening."

# 3143. Pro-93 Or BC-245xlt ?

Newsgroup: rec.radio.scanner
Date: 2001-12-01 07:12:58 UTC
From: trapshooter870@aol.com
Message-ID: <20011201021258.17763.00000121@mb-bh.aol.com>
Source record: 56089

I have been looking to buy a new handheld for a couple weeks now, I had my sites set on the Bearcat 245XLT but the dealer I was going to get it through has been out of stock. So when I see Radio Shack put the Pro-94 on sale for $149.00 I decided to give one a try. I had it for a few days and then read here that the Pro-93 had better audio and the text tag feature. So I went out today and bought the Pro-93 to compare the two. After just a few hours of playing with the 93 I took the 94 back. I really like the 93's text tag feature and I do think the audio is louder and clearer. I also programmed both units to receive the neighboring town's trunked system, the 93 picked up the signal just fine and 94 failed. Another feature I liked was the back lighting of the 93's display, you can set it to remain lit and it shows up better than the 94 in the dark. So all though I have only had it a few hours, I am pretty satisfied with the 93.
Now I am wondering if I should just forget about the Bearcat 245xlt. I kinda wanted to play around with its computer controlled features, but other than that I didn't see any reason to give it a try. I tried to locate a retailer where I could buy a BC-245 to try it out but Uniden doesn't sell it through any local retailers.
Has anybody out there actually compared the Pro-93 to the BC-245xlt? If so, what did you like or dislike about them?
Thanks in adavance ..... Steve L.
PS: Any Pro-93 owners have any tips or tricks I need to know about ?

> >radios. Anbody got a clue as to who this might be?

Last Tuesday night, I was listening to some prep-to-prep traffic on 28400, and heard the following:

"37 to 32, I'm northbound Middle Belt approaching Orchard Lake, I'm going to turn around and check the other direction, in case they might have doubled back. Check with 1408 and see if you can get a better description." and the other unit replied, "Ok, when you get back in the area, switch back to talk-around"

I suspect this might be some command officers for West Bloomfield Twp. PD, or maybe Orchard Lake PD. I have heard past rumors that West Bloomfield Twp. PD wants to switch over the Oakland County TRS, for better coverage.

fascinating, educational, and, at times, a bit funny.

On Nov. 15th, 2001, two trains (including one carrying hazardous materials) collided in North Oakland County, Michigan.

I have placed a portion of the Oakland County Sheriff's Dept. traffic from the accident online at:
http://www.michnews.net/audio
including soundbites of some of the more interesting exchanges, as well as a condensed continuous-loop streaming audio replay.

IMO and experience, the Oakland County Sheriff's Dept. is a very capable and professional organization, and I believe some of the nation's "Barney Fifes" could learn a lot from them.

Alas, if only I could say the same for some of the locals from Pontiac, Auburn Hills, Keego Harbor, and Waterford.

Those are definitely West Bloomfield locations. Orchard Lake, Keego
and Sylvan Lake use W.B. dispatch.

I've been monitoring those TGs all night with ScanRec
(http://www.davee.com), but haven't got anything, so I'm sure they are
just testing for now. Things are not THAT quiet in West Bloomfield.

Illegal in Australia? I saw plenty of stores selling scanners in
Australia. Dick's Electronics had loads of them. But if you spend five
weeks in the bush, it's deadsville. I did hear the digital hiss of the
GRN which sucks, but that's another story.

I just got back from Australia from the US. Carried a daypack on board
with the AR8200b, the ICOM R-2, cell phone, opto-scout, palm pilot,
Kestrel 4000 weather station, binoculars, camera and color palm pilot.
Complete with wall-warts. Went through about 15 security points at
least, each way. Once a security checker asked me to open it, I did and
explained, "3 radios, weather station, cell phone and so on and so forth.

I thought I was all clear walking thru my first security checkpoint
leaving the US, but forgot about the condoms in my wallet. OOPS! :))

Scanning in the airport is probably not such a good idea, and there's nothing to hear in a plane, that's a no-no anyway.

Keep in mind that most of the employees at these types of jobs are not looking for a career. They are simply trying to pay their bills while they look for a career. I'm sure there has been many a student employee that became a amateur radio operator from having their interest stirred while working for companies like radio shack. Lets not be so critical of their lack of knowledge and just hope that maybe seeing some of us having fun with electronics will spark an interest in them. A big part of being a ham is educating the public.

Message-ID: <AZ6O7.934$T5.63698@news1.epix.net>
Source record: 56005

Hi,

Well. it's time for a scanner upgrade, at least in the BASE category anyway. The equipment I'm now using is a Regency HX1500 HH, and a BC-560XLT and BC-210XW as BASES. With a budget cap of $300, what scanner "new from the box" would you recommend in both the HH, and BASE categories in terms of sensitivity, audio volume, and reliability? My primary monitoring falls within the VHF 159.810 -161.565 MHz range using a homemade "copper pipe J-pole antenna for the BASE scanner.

In addition, who is generally regarded as a reputable retailer from which to purchase this scanner?

Thank you in advance for all your input.

Dave

I remember hearing these many years ago between 894 and 895 MHz. They were indeed on AM and not encrypted. I seem to remember searching in 5 kHz steps. I'm not sure if they're still widely used.

To truly track an aircraft with a beam, you would have to steer the antenna in both azimuth and elevation. An simple "eggbeater" type antenna (as is often used by hams for low earth orbit satillites) might be a good choice. See:
http://members.aol.com/k5oe/eggbeater.htm

Source record: 56012

I'm thinking about buying a new "DC to Daylight" receiver.
I'm been looking at Yaesu VR5000 or AOR 8600, but don't know which to choose.
Are there someone who have some experience with those?
Are there any other receivers on the market, for the same task?
I'm looking for good performance on HF (SSB, FAX, RTTY etc).
I also want good performance on VHF and UHF (also high UHF frq.)
I'm only interrested in multi-mode, unblocked versions. (I don't live in the US! :-)

M.S.

No way a stock PRO-2006 picked up cellular. Only the very early PRO-2004's
did. Later 2004's and ALL 2005/2006's were blocked.

I dont think the imcompetence at Radio Shack is any less than the incompetence found at any other business or bureaucracy (especially the latter). The Peter principle ensures that incompetence is the standard :) At the CDC they didn't realize that anthrax could escape an ordinary sealed envelope. We're talking GROSS incompetence folks :-o

But with the "snip" of a diode it will..... I didn't say "unmodified
PRO-2006", just Pre-Ban. the Ban I was refering to was the ban on
"easily modifiable scanners".

Most of the people at Rat Shack are not technical, and many hams
delight in going into a RS damn well knowing that the 18-yr. kid
behind the counter knows diddly about electronics, or what the
company sells in the parts isles, just to be able to put the clerk
down as being a moron.

Fifteen minutes research in a
catalog, or online, will yield the part number, which any clerk can
then look up to verify if, and where, it is in stock.

Everything you've said is true. The issue, however, is that RS as
a company has cultivated a market niche hungry for electronics
expertise. The slogan, "You've got questions, We've got answers,"
fairly cries out "technical knowledge." Something, at one time, RS
was well known to provide in abundance. But when Tandy, now
RadioShack Inc, moved away from hiring competent electonically
informed personell, they did not position themselves away from the
'providers of expertise' notion. Rather, they continued to cultivate
it.

For that, alone, RS deserves more than a little of the contempt
heaped on them.

And that 18 year old kid has gone out of his way to try to present
himself as a technical whiz kid, whether he knows which end of a
battery is up, or not. If you've ever heard a clerk telling a
prospective customer that a headphone is digital ready because 'it
has more megahertz' or that a NiMH battery is a new kind of Ni-Cad,
and may be used, and charged interchangeably, you'd see that many of
these kids invite the kind of abuse that old line hams have brought
to them.

RS abandoned hard electronics in the 70's. We knew it. Truth is,
THEY knew it. They've always admitted that for serious quality
components, we all go somewhere else.

Even so, they've continued to present themselves as the 'experts'
in electronics.

It's an open invitation to the kind of childish abuse you
describe.

And as we all know, here, there are plenty out there who live to
provide it.

OK, I'll try this one more time with a heck of a deal for this receiver before it's off to eBay..

I am selling an ICOM R-2 Receiver, like new condition, in box with manual and accessories. US VERSION.

$100.00 plus $5.00 for shipping via USPS Priority Mail, insured.

US Postal money order, or PAYPAL. Personal check OK, but will delay shipping until it clears.

NO C.O.D., NO TRADES.

Check my eBay feedback under OFFDAN

E-mail if interested.

Dan

Peter:

> The slogan, "You've got questions, We've got answers,"
> fairly cries out "technical knowledge."

i agree... in the past many of the guys behind the counter were hams or 'into' electronics and knew a great deal. maybe their new slogan should be "You've got questions... We've got cellular phones with 50% more gighertz.".

i know that inside we're not bashing Rat Shack... we are instead mourning the loss of competence behind the counter... some still exists but its like the taliban... in small pockets. sadly if the trend continues your trip to radio shack might look like this someday: in the store window you notice a sign that says 'no germanium diodes, go check the bakery next door'. then you open the door to the 'the shack' and carnival music starts. upon entering a clown with a big nose that looks like a cross between big bird and ronald mcdonald's evil twin will greet you and say 'how about a cellular phone? little partner.'... then he'll squeeze his red nose... *beep beep*... to this you'll say 'get lost bozo' and then whisper to your kids 'avoid eye contact with the lunatic while i get some of them fine 1 mAH green batteries'. 'Bozo Shack, We've got cell phones!'

reminds me of a benny hill skit:

benny: 'what's he got that i haven't got?'
girl: 'well, he's got wavy blond hair'
benny: 'well, I'VE got wavy blond hair!!!'
girl: 'well, he's got strong white teeth'
benny: 'well, I'VE got strong white teeth!!!'
girl: 'well, he's got brains and intelligence'
benny: 'well, i've got strong white teeth'

phil :)

'You've got questions? We've got strong white teeth!!!'

Anyone that has such a low opinion of himself that he has to put down an "18 year old kid behind a parts counter" in order to feel "smart" is in such sad shape as to deserve our pity and "many" hams do not have time for such child like behavior they are too busy helping on the community with Sky-Warn, and other activities.

If you have a scanner wich tunes 800Mhz, and you can't hear them, only "noise", then they may have gone digital. In which case no presently available scanners will pick them up.

According to international regulations, it's unlegal for passengers to operate radio transmitters (mobilephones/cell phones/amateur etc..) and radio receivers (scanners, shortwaveradios, TV's etc....) onboard aircrafts without the permission from the aircraft owner and the pilot in command (The Captain.). (The captain is rarely the owner of airline, so you need permission from both.)
(Ref: Joint Aviation Authorities, Federal Aviation Administration, International Civil Aviation Organisation)
The captain of the aircraft is the authorities onboard and he can legally confiscate anything.
Any way, he will have to deliver the equipment back at the destinations.
(That will don't apply for weapons, narcotics and other stuff known to be unlegal.)

Yes, it's the truth, take it from me, I work at an airline.

Martin

Message-ID: <HnfO7.33185$z8.6936847@news02.optonline.net>
Source record: 56035

I'm ready to turn in my old RS Pro-62 and get a real scanner in the United States. I want something up to date and under $400. My main goal is to get rid of all those stupid gaps. I WANT WIDEBAND!! I'm thinking like a VR500 type radio. Send me links to pages that have a selection for me to choose from. Send me your recommendations. Send me money . . . just kidding :)

I'm looking for a keypad programmable portable scanner/receiver that covers something "like"(Does not have to be exact) 100 kHz to 1200 MHz(No Gaps) with:

a) 10 Banks or more
b) 200 Channels or more
d) Enough amplitude for it's speaker to succeed in noisy city streets: I'm "satisfied" with the Pro-62 and the Pro-92's speaker performances, but I'm not impressed with the Pro-94(too quiet).
e) 12-14 hours batterylife/charge.

I'll be monitoring:

3m and 30cm HF/UHF/VHF
UHF Landmobile(400MHz)
Aviation(100MHz)
Military Air
Commercial Radio
Television

# 3187. FS: SMA-to-BNC custom fit antenna adapters

Newsgroup: rec.radio.scanner
Date: 2001-12-02 03:14:45 UTC
From: gulyas@earthlink.net
Message-ID: <12235960.0112011914.5792baa2@posting.google.com>
Source record: 56037
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify-radio-model)

Ya I agree. Somedays when boring times are around. I somedays scan thru the 800 band with my R2. Still pretty boring though. Hard to believe my town still has the majority of phones analog. Well one provider is digital. the main one is analog. But out here in the boonies. The phones rarely change channels either. I guess this is what I get for moving to a small town of 16000 people in canada. LOL. Snow is more interesting.

I'm thinking about purchasing a scanner from this company in Canada, but I don't know anything about them . . . http://www.dxcomm.ca/ . Please let me know if you know anything about them.

I'm looking for their unblocked R-10 because it's cheaper than the government issue R-10 in America. By the way does anyone have a clue WHY it costs the government over $100 to get an unblocked scanner??? $299 for R-10 standard U.S. version and $439.95 for government version??? Are we being charged to have a diode removed or something?? What's going on??

# 3195. Re: Taking scanner on flight?! Advice

Looking for a very clean Radio Shack scanner that can do cell or cell images. With the exception of a 3000xlt I am also lookin for. Must be clean with antenna, manual and ac adaptor(hopefully). Items in particular Pro 26 or 43 or similar. If you have an actual pic please send it to help me out. Please give me your best price. However I am willing to pay a good amount if the right one comes along. I know some of you guys have some really nice gear. I can send a postal money order. thanks

Yes, my brother works for WBTPD, they are currently testing out radios for handheld coverage on the Oakland County and the State Police systems for comparison coverage. The department along with Keego Harbor and Orchard lake will probably move to one of the systems by late next year or sooner.

Bring on a digital scanner ASAP!

Message-ID: <_JIO7.1435$351.375837@news1.news.adelphia.net>
Source record: 55950

I don't think it is, I know it is (in New York State). But
don't take my word for it:

New York State Penal Law

ARTICLE 250
OFFENSES AGAINST THE RIGHT TO PRIVACY
Section 250.00 Eavesdropping; definitions of terms.
250.05 Eavesdropping.

S 250.00 Eavesdropping; definitions of terms.
The following definitions are applicable to this article:
1. "Wiretapping" means the intentional overhearing or
recording of a
telephonic or telegraphic communication by a person other
than a sender
or receiver thereof, without the consent of either the
sender or receiv-
er, by means of any instrument, device or equipment. The
normal opera-
tion of a telephone or telegraph corporation and the normal
use of the
services and facilities furnished by such corporation
pursuant to its
tariffs or necessary to protect the rights or property of
said corpo-
ration shall not be deemed "wiretapping."
2. "Mechanical overhearing of a conversation" means the
intentional
overhearing or recording of a conversation or discussion,
without the
consent of at least one party thereto, by a person not
present thereat,
by means of any instrument, device or equipment.
3. "Telephonic communication" means any aural transfer
made in whole
or in part through the use of facilities for the
transmission of commu-
nications by the aid of wire, cable or other like connection
between the
point of origin and the point of reception (including the
use of such
connection in a switching station) furnished or operated by
any person
engaged in providing or operating such facilities for the

transmission
of communications and such term includes any electronic
storage of such
communications.

S 250.05 Eavesdropping.
A person is guilty of eavesdropping when he unlawfully
engages in
wiretapping, mechanical overhearing of a conversation, or
intercepting or
accessing of an electronic communication.
Eavesdropping is a class E felony.

I live in Canada. but. most canadian/eu version have just different firmware. Most but not all. That page keeps crashing on me tonight. But. I only bought from Radioworld and Burnaby Radio so far. Both shipped very fast. talking to radioworld in person. when I last did. they were rude. compared to burnaby radio. They were friendly. But both ship out of canada and are 2 that I reccomend. All depends where you are in the US. Burnabyradio is in British Columbia and radioworld is in Ontario. This Icom I just bot works great.

I have an excellent condition Pro 2006 scanner for sale. It comes
complete with the owners manual and original antenna. I can send a pic if
you are really interestsed. Cell and speed mod done. Backlight is bright and
I would give it a 8 on a scale of 1 to 10 in brightness. Scanner is
extremely clean and I don't smoke. Scanner is in perfect working order and
will guarantee not doa. Price is $250 including UPS insured shipping. Postal
money orders only. thanks

I found a complete list here:

http://www.panix.com/clay/scanning/Frequencies/Marine/marine-vhf.html

VHF is line-of-sight for the most part, and 10 miles away is not too far. A small external antenna would be a plus though. I use my home-made 1/4 wave ground plane 2 meter antenna to receive Marine band and pick up transmissions 20 to 30 miles away. That's with the antenna mounted on a 5 foot mast on my chimney (20 to 25 feet up). Your best bet for local frequencies is to use the above list to set a high and low point for a frequency search on your scanner and spend a little time by the radio logging the active ones.

Coming from a lothsome piece of shit like you, that is painfully laughable. You are worthless trash; an immense failure who is so pathetically desperate for attention that you even seek out people's disgust and scorn. You're like a little dog that has been repeatedly abused, and so it goes around cowering, sniveling and crawling on his belly.

Thanks God there are filters for newsreaders, because you of all people, should be removed from the sight of normal people.

Goodbye loser.

If RS is going to push their advertising slogan "You've got
> questions, we've got answers," they damn well should hire personnel who
can
> provide those answers.

Picky, picky, picky. Their slogan is just advertisement and for a large percentage of the dumb clueless people that walk through their doors with a question, they have the answer and do remarkably well. Just stand there and listen to the majority of the customers ask a question. Example: " I need this thing-um-a-bob that hooks onto this other widget that makes this other thingy go around, and non of it came from Radio Shack. Oh, BTW, my seven year old hit it with a hammer and decided to take it apart and lost half the parts, especially all those springs. Can you help?"

You must really go into orbit when you hear other advertisements, such as " Built Ford tough....." or "Built like a Rock...." or " Just like Grandma used to make..." or "Farm Fresh...." or " this food is good for you..."

I bet ya a Radio Shack floor person knows more about what is in their store and how it works than a car salesman/real-estate salesman. The intelligence of a car salesmen and real-estate personnel, now there is a whole newthread.

>
> I don't blame the employees; it's RS corporate management's fault.

Like I mention above. You better be bitching about all the rest of society/corporations/advertisement firms/slogans

Point well taken! And of course we have all had fun with our own
interpretation of those slogans.

Burger King - Have it THEIR way!
Ford - Found On the Road Dead!
Or my favorite when I owned my Fiat.... Fix It Again Tony !

I think we have all seen the expertise level dropping in all consumer sales
fields. Lets face it, if a kid knows his stuff about electronics, he can
make twice the wages offered in the sales field by putting his knowledge to
work in the field.

Though I'd like to talk with someone who is not "electronic challenged" at Radio Shack I suspect we shouldn't really expect that. At today's rates I don't think it feasible nor necessary to hire techs for the sales positions. I'll conceed that if they imply expertise they should rethink their advertising campaigns.

Radio Shack stores contain two basic types of material. Components such as caps, solid state devices, connectors, cables take up much of the inventory while the balance are consumer electronic devices. I think it fair to assume that a customer seeking a component has the necessary degree of competence to know what he wants and why. Just as we don't expect McDonalds order-takers to be chefs when we select from a menu why expect a sales clerk to be a tekkie when we plop 2N2222 onto the counter? We don't expect the TV salesman at Sears to be a qualified repairman or the Chevy salesman to be a mechanic in the case of consumer products.

The Radio Shak kid (or other) is simply making a buck, often has no expectation of staying long enough to call it a career. Maybe we, as hams, should take the opportunity to offer some of our knowledge rather than place our noses in the air when we go to Radio Shack.

> I also want good performance on VHF and UHF (also high UHF frq.)

When it comes to good performance on HF both radios are suboptimal! Both are designed to be very good on VHF to SHF but on HF both are not the best choice. You have to climb up a few price classes to an ICOM IC-R8500/9000 or AOR AR5000 to have a rig which provides also good HF performance. Or choose a HF-only rig like NRD 535/545 etc for FAX, RTTY.

Regards
Howard

> Burger King - Have it THEIR way!

From a couple years ago, ad song:

We do it like you'd do it
if you do it like we do it at Burger King.

> Or my favorite when I owned my Fiat.... Fix It Again Tony !

I had a lot of trouble with the NAPA parts guy locally.
I had an 850, and whenever I went in to get parts, he always gave me parts
for HIS 124.

Hi i'll i've read alot on the web about scanners ect.. in 2 months i'm looking at buying a base scanner however i'm not sure what one to get

i was looking at the
Bearcat
BC780XLT-500 channel
or
BC895XLT
i do live in canada so not sure how available these are yet
but what other scanners have the pc software with ect..
what sort of options should i look for ?
do the 2 listed above have the pc software.. ?

Why don't some of you guys who have trouble with the level of expertise that you find at Radio Shack go to work there and see what you can do about improving the situation?

I know what you mean. On slow days I go out and examine the snowflakes too. On one outing I found about six or seven of them that were identical in every way. Shape, weight, pattern, everything was identical. When I brought them in to the house while I phoned the Guinness Book of Records they all mysteriously disapeared. Guess I have to find some more...

LOL! I was waiting for this. I did. I tried working there when I
was in high school. I was not hired specifically because I was
overqualified. These were the manager's words. This was in the late
60's.

I tried again part time some years again, and during my
'orientation,' was told by the manager, "You don't always have to be
right. It's not rocket science, and these people don't know what
you're talking about anyway. Throw around a couple of buzz words,
tell them it's Digital, and ask for the sale."

This was the same manager I watched take a return of a receiver
that had failed, put the new receiver in the customer's old box, the
old receiver in the new box, and returned the new box to the shelves
at full price. "Someone will buy it. Otherwise we have to eat it, "
was his explanation.

I've seen this done in dozens of Radio Shacks throughout the
Midwest, and have had manager's admit to it in several more.

I did write a letter to Fort Worth about this practice on a number
of occasions. They sent me a free battery card.

What's interesting here, and the source of the conflict, is that
RS has continually positioned themselves as a place where one can go
to get answers in matters of technology. And yet, as a culture, they
avoid anyone who actually has answers. This is certainly not the 18
year old's fault. It comes from, either by design or default, the
corner offices in Fort Worth. What IS the 18 year old's fault, is
that he/she doesn't take it upon his/herself to get smart quick.
When I tried pointing out to one clerk that transistors and IC's do
not need to be periodically replaced like vacuum tubes, I was asked,
"what the hell do YOU know about it?" Not the sign of a hungry
mind.

One other point that was brought up during this thread was that RS
clerks know more about what's for sale in their stores than car
salesmen know about their products...

This, too, is false. Time and again, I've watched a customer walk into a RS ask for a product and the clerk has to ask the manager if it's available. Usually while standing in front of the product on the shelves. In one more or less hilarious incident, a customer came in looking for a cell phone accessory, I believe it was an earpiece/boom for a Nokia. (They sell them there, btw. Jabra is the brand.) Anyway, the customer was asked "what kind of phone?"
The customer replied, "Nokia."

The clerk said, "Oh, I'm sorry, we only handle Verizon."

He said this standing in front of the Sprint display.

So to repeat: Yes, there are those of us who have tried to bring technical know how to RS.

The truth is, they didn't want it.

This problem is unfortunately in every audio/visual store in the land. Go to Best Buy and try to get some answers. . .Hell go and try to get any of the sales people to even talk to you! Before I buy anything now, I go to the Internet and newsgroups and do copious research. The problem is, even if you know what you want, the salespeople do not even know where to find it in the store. I think they should at least know where to look. If I am doing a mod, I get so excited that I want to be in and out of RS with product in hand ready to solder. . .Not standing around watching the salesperson look at the catalog.

Thanks
Greg

In Texas, it is illegal to listen to any telephone conversations, be
it cellular, cordless, or whatever.

I also think, the same way alot of others do, if they don't want you
to listen in on these calls, then change from analog transmissions to
digital spread spectrum DSS. Also, anything transmitted in the "clear"
and passes through your private residence, should be your decision
wether you listen to the transimission or not.

After all, these companies and individuals did not offer to pay you
for transmission rights to cross your house and personal property.

# 3229. Pro-2067 Not Trunking! Ideas please...

Newsgroup: rec.radio.scanner
Date: 2001-12-02 19:24:31 UTC
From: Frank <frankl@home.com>
Message-ID: <3C0A807A.378323B8@home.com>
Source record: 55980

Just bought a used 2067. Seller confirms he had no problem with MOT trunking systems. I cannot get the unit to lock on a talk group. The 'conventional' part works as advertised, however the trunking part won't lock on. I programmed (following the manual) all frequencies, including the control channel (N San Diego County RCS, MOT Type II) exactly as in my Bearcat 895, including the talk group IDs. I hooked up both units to the same external antenna. The Bearcat trunks perfectly; the 2067 never comes out of "Scanning". I have reset, re-initialized, re-checked the frequencies and switched antenna cables, all to no avail. I have eliminated conventional freqs in the trunking band, no help. Before I send this thing in to RS for repair(?) (and a whopping bill, I imagine), does anyone have any ideas I haven't tried (besides throwing it against the wall) that might make a difference?

Thanks for reading.

Frank

The 2067 will not track splinter systems. There are some in San Diego and maybe the one you are interested in is a splinter system. If the frequencies are 85x.xxx0 instead of 85x.xxx5 it is a splinter system. This deficiency was corrected in the PRO-2053.

No, but I *do* expect them to know which items have onions in the
sauce, etc. They usually do, too, since management doesn't want to be
sued by a customer who found out the hard way that they were allergic
to a product the counter guy told them would be ok.

How many car salesmen are going to keep their jobs very long if they
don't make at least a basic attempt to learn the features and specs of
the models they're selling? Most of the new car salesmen I've dealt
with could at least quote the specs and identify all the major
components under the hood.

It's $299.99 for U.S. unblocked. I don't think cellular is worth $140.

No matter what the state laws claim to regulate, I believe FEDERAL law
takes precedence in all matters relating to what you can receive,
listen to, etc. The exception to this is what you can operate in a
state licensed motor vehicle, where state licensing regulations takes
precedence over federal law.

> Jeez. For a country that touts freedom-
> you've sure got a LOT of things you can't listen to.

It's called "blame anyone but the criminal."

I read in "Popular Communications" and/or "Monitoring Times" four or five years ago where a criminal took his case to the supreme Court, saying that the police couldn't use his cordless phone conversation as evidence against him. The supreme Court ruled against him, so *apparently* that would make it legal to listen to cordless phones. At least for the police. Whether that will hold true for the average, law-abiding citizen is another matter. I feel that the average, law-abiding citizen should be able to listen if he/she damn well pleases. They're not hurting anyone.

We have police friends in a small town nearby and they listen to the drug dealers down the street.

Interesting, I've heard there is something like a 300% employee turnover at
fastfood establishments. Just how much do you think they care what has
onion. Management is more concerned about how will they staff the next
shift because of this turnover and nomadic workforce.

Good advise. I've been doing that most of my life.

The problem is, even
> if you know what you want, the salespeople do not even know where to find
it
> in the store. I think they should at least know where to look.

Hmmm, most of the time, I tour the store and pretty well know where to find things. After a few visits, I got the store layout and merchandise offered pretty well figured out. But, on those occasions that I don't find it, then I will ask. What really screws me up is when two stores from the same franchise organize their stores differently. Crap, I have to start the search and seek process all over again.

I don't have a 93, but it is a nice combo of features. Especially the CB range. But it has been reported by a number of people that the current revision has some bugs. I don't know if these will be covered under the warranty or not. If yes, then this might be a good deal on sale.

# 3255. HELP needed w/ PRO-92 Trunking

Newsgroup: rec.radio.scanner
Date: 2001-12-03 04:43:22 UTC
From: David Honeycutt <dhoneycutt1@home.com>
Message-ID: <KpDO7.10867$Il4.1664944@news1.rdc1.ga.home.com>
Source record: 55905
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hello Everyone,

This is probably a "newbie" question, but I need your help w/ my PRO-92 scanner. I've been using it for about 4 months, scanning primarily 800 MHz Police, EMS, FD, etc. The scanner seems to do quite well scanning the trunked calls, but during busy times, I hear alot of annoying 'clicks', much like a scanner set to monitor a priority channel. I have switched from scan to manual on a call that was particularly noisy to monitor the Talk Group ID's and found the scanner displaying several different ID's while the conversation was going on. Later in the day and late at night when traffic is lighter, the clicking noise is not present. Calls are crystal clear. Could be another aspect of Trunking that I do not understand.

Help me understand, if you can...

Thanks,
David

# 3256. 42 MHz bounce?

Newsgroup: rec.radio.scanner
Date: 2001-12-03 05:12:53 UTC
From: Tom Tretheway <tomt@ncal.verio.com>
Message-ID: <3C0B0A05.81B56715@ncal.verio.com>
Source record: 55906

I routinely listen to the California Highway Patrol on 42.65 MHz
here in the SF Bay Area. I recently installed a Diamond discone antenna
and now am hearing something odd on this frequency. Mixed with local
CHP, I am hearing what sounds like highway patrol broadcasts from the
Southern part of the US. Everyone in these broadcasts has a deep drawl
and nothing sounds local. When the local CHP dispatch broadcasts, they
easily cover the Southern broadcasts, and I'm really curious about what
I might be hearing.
I'm hearing these Southern broadcasts at mid day on the West Coast.
I haven't been able to hear enough to identify the origin. Does anyone
have any thoughts on how 42 MHz might bounce, mid day, from the Southern
part of the US, to California?
Tom

# 3257. Re: 42 MHz bounce?

Source record: 55907

You might be hearing the North Carolina Highway Patrol (PL 173.8). Another possibility is the South Carolina State Police. I regularly hear these agencies from my location in San Diego. The Missouri Highway Patrol uses frequencies in the 42 MHz range as well, so that could be another guess. If I remember correctly, their PL is 192.8. I'm sure many other police agencies can be found here as well. If you search between 30-43 MHz, you will hear a lot of comms originating from the east coast, and possibly other countries as well. It seems most of the law enforcement stuff can be found between 37-38, 39-43, and 44.500-46.600 MHz.

Here are a few sites you might want to visit, that explain in detail about VHF skip.
http://www.strongsignals.net/access/boards/skip/board.cgi
http://groups.yahoo.com/group/vhfskip (good email group!)

If you have a scanner that supports CTCSS you can program the local frequencies along with the tones to filter out the east coast stuff if you don't want to hear it on local PD channels. It can also help you identify some of the not-so-local agencies you've been hearing.

Hope this helps.

Brandon

I just returned from the aborted launch 11-29-01.

The most active frequencies where KSC Security and the News Media. I had two scanners running full tilt and each scanner did not have the same frequencies programed in them. I was sitting in my vehicle on KSC property.

All the Grove frequencies are not what they are made to be.

Worse case scenario..... use whatever word processing program you may have.
Or whatever database or spreadsheet program. Any of these can be used,
although not the best solution, they can be used. Have any of those types
of programs??

These are a disaster if you change connectors a lot. Stephens adaptor
has an extra rubber ring around it that prevents the adaptor from
wiggling and thus breaking off the HH side of the sma connector.

Bear in mind that beam heading and compass heading are not quite the same.
In many areas, true north and compass north can differ by more than 10
degrees. And if you "correct" in the wrong direction, you can be more than
20 degrees off!

I heard a very unusual transmission on 14790kHz or so. Every few seconds a short tone could be heard, which quickly went from a high to a low pitch. It continued for a few minutes and then I lost it. This happened about 0700hrs UTC or so.

My location is Brandon, Florida USA (27° 56' 38" N / 82° 18' 0" W )

From: mankind@aol.com
Message-ID: <916CAE1EBmankindaolcom@24.18.102.151>
Source record: 55931

The big deal is the cellular companies lobbied for and got a law passed banning cellular phone monitoring and later banning the sale or import of scanners capable of monitoring cell phones. All this so they can ensure privacy to their customers. The moral of the story ? Got cash ? Get legislation. There was an article in MT years ago of how congress had Bob Grove testify and he was really treated horribly, like he is a criminal or something. They brought him to Washington to testify about how the scanners can be modified to receive cellular but in fact he was there to be the bad guy.

Source record: 55933

>I routinely listen to the California Highway Patrol on 42.65 MHz here in the SF Bay Area.

Tom,

There's an incorrect digit in the frequency you gave ... 42.65 MHz is not a standard allocation.

If you meant 42.56, it might be NC Department of Corrections you'll hearing. As another poster mentioned, the tone would be 173.8 Hz. All the prison camps have a base station on the channel, but internal comms at the camps are usually on high band. Units I-D with 3-and4-digit numbers.

Most of the other 42-MHz allocations in NC are used by the Highway Patrol. Again, the tone is 173.8 Hz. The dispatch centers I-D by location, and the mobile units I-D in the letter-number-number-number format.

South Carolina Highway Patrol also uses 42 MHz., and I believe Mississippi does, also.

You may also hear law enforcement on 42 MHz from Missouri, Michigan, Illinois and Massachusetts (? about Mass).

You should start receiving skip from the East Coast around sunrise at your location, and it will end as sunset overtakes your target location.

Fell free, if you believe you heard the Carolinas, to send me the details, and I will try to confirm.

Jeff Multer
Fort Mill, S.C.

# 3284. Re: Pro-93 Or BC-245xlt ?

To be a bit more precise, these bugs have been reported by others:

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=499
usability

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=563
quirks

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=525
alpha tags

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=333
adapt-a-plug

And a comparison to the Pro 92 makes me want to wait for the "Pro-95":

http://www.trunkedradio.net/cgi-bin/ultimatebb.cgi?ubb=get_topic&f=23&t=000032
"I am not so certain about the Pro 93. About the only thing that I did
like was the fact that it runs on 4 batteries instead of 6. You have
200 less channels than the Pro 92, less trunking capability (LTR), no
CTCSS/DCS search and display as the Pro 92, no aviation, and no
supporting programing software. Also, the Pro 93 operates off of
firmware version 1.0 (Not Good)if ths is the same firmware used in the
initial pro 92. And the price is the same as the PRO 92. So why pay
the same for less?"

Scenner looks almost new and it works great. Great reception. Comes with antenna and power supply. No manual but one can be seen at Uniden website. 300 channel scanner. $120 shipped UPS payable by Usps money order. First person with verifiable address and phone number gets it.

# 3288. 800 MHz Outdoor Antenna Advice Needed

Newsgroup: rec.radio.scanner
Date: 2001-12-04 01:22:21 UTC
From: David Honeycutt <dhoneycutt1@home.com>
Message-ID: <hzVO7.11293$Il4.1751277@news1.rdc1.ga.home.com>
Source record: 55938

I know there's been much discussion about the best scanner antenna for 800 MHz Trunked reception. What's the final word?

I'm using an ordinary RS Ground Plane all-channel scanner antenna w/ 65' of RG-58 cable. Reception is good, but not that much better than from the handheld's own antenna. Would my reception be improved (noticeably) w/ a better 800 MHz antenna and cable?

What antenna and cable do you recommend?

My primary interests are (2) 800 MHz trunked systems, (1) about 6 miles away, the other about 11 miles away. The closer one is received well the other, not so well.

Thanks in advance for your help,
David

Pick up a cheap GPS on eBay. Enter the coordinates of the place
you're trying to aim at, (available from MapBlast.com) and it'll give
you the heading in true or magnetic, and the exact distance for
bragging rights.

If you go the GPS route don't forget to punch a hole in the wall and run a cable for the outside antenna you will probably need :-) unless you are very lucky. I have had to drill a few holes into by basement 'shack' already!!

# 3291. Uniden America Service

Newsgroup: rec.radio.scanner
Date: 2001-12-04 01:47:57 UTC
From: Bart Bailey <f@l.se>
Message-ID: <3C0C2B4D.F5071146@amsat.org>
Source record: 55941

Back a couple months ago I finally ordered my BC780XLT and
it came right on time,
I was really pleased to discover, one by one, all the nifty
features it had.
Then,
not quite a month into my ownership,
as I was getting more familiar with it,
I discovered that the "beep alert" feature was inoperative.
This wasn't too big of an inconvenience,
since it would be only rare occasions when this feature
might be used,
however the thought that a microprocessor driven device had,

perhaps a blown gate,
didn't reassure me that there weren't additional anomalies
to be discovered at some later date,
maybe even after the expiration of the warranty.
On the first of November I sent the unit back to Texas for
repair or replacement.
This was after calling tech support and having them walk me
through the seemingly simple steps,
just to confirm that there was indeed a problem,
and also to confirm the return procedure.
OK, so now I just had to wait maybe 5-10 business days plus
3 days for shipping, and I would be back to enjoying this
unit.
Too easy, it seemed,
as if the $17+ dollars I had to pay to return weren't
enough,
subsequent status check calls soon began to create that
haunting ( I've been had) feeling.
I called on the stated date of repair Nov 27 and was told
the unit had been repaired but there were some issues with
the shipping department and it would go out the end of that
week.
That week passed and this Monday morning I called to get a
tracking number and was told that they couldn't even confirm
that the unit had been repaired,
and due to some backlog,
they couldn't give me a estimate of when, if ever, I would
get my 780.

In summation; If you're considering "anything" from the
Uniden America company, I would advise you to re read my
narrative above and get yourself accustomed to the ponderous

process you might encounter if anything should, be or go,
wrong with it.

~~Bart~~

Can anyone tell me if their are any handheld scanners that will pickup 235mhz to 381mhz...as well as the "normal" frequencies and trunk ability? My local Coast Gaurd "Search and Rescue" uses these frequencies, and I would really like to listen in on those missions. As far as getting a scanner modify, is there any certain qualified people that would do this? And how do I get a hold of such people?

I have gone through 4 or 5 of Stephen's adapters over the last couple of years,
but the life span of his adapters is much better then the cheap adapters that
you can obtain elsewhere. I use the adapters every day in
all sorts of extreme environments, such as sitting in my van with my Icom R2 in my pocket.
Not a smart thing to do. Only one of the adapters failed for an unknown reason, as I was
changing
out antennas, but all of the other adapters failed because I tortured them. My whip
antennas also
wear out every few months.
The bottom line is that the adapters lost, the radio won.

mmmm...sort of a brief "ratcheting" ie like when a pneumatic wrench reaches its torque setting. Sounds like a short digital signal similar to the ry ry ry that beacons a teletype frequency.
RN Gibraltar (Royal Navy) is the most likely candidiate, at 14790Khz. Although (and this is unlikely) INA Baghdad (Baghdad news agency) is at 14799Khz and CNA Taipei (press agency)is at 14785Khz. There is also a faint CW beacon on the frequency. A quick scan of the surrounding frequencies reveals no obvious interference although XNA Beijing is close and S9 at 14760Khz, and there are heaps of RAF frequencies and USN/Mars in the general area. Perhaps you might like to post a wav file.
cheers
Mal

I can't talk about Lowrance or Magellan but on my Garmins when doing a planning function I can turn off the annoying "Poor GPS Coverage" message by switching to Simulator Mode. And since it is a quick one-time thing, the message will only come on a time or three. This is assuming that the "shack" is not moving (RV, boat, etc. would then require an antenna). Hopefully your basement is stationary :).

I have been hearing the same from the Northern Ca area. It has been coming in on my handheld scanner for about 3-4 months now. I have heard Carolina related agencies. It happens throughout most the day/night. I get it when I use my roof mount antennae. once in awhile while using the standard rubber ducky, I get it too.

Stand outside with the GPS until it gets a lock, then turn it off and
go inside. All three of mine just assume they're still at their last
valid location until they get another lock.

No, the 92 and 93 do that. There is no software for the 93, however.

> You may also hear law enforcement on 42 MHz from Missouri, Michigan,
Illinois
> and Massachusetts (? about Mass).

Jeff,

Hear the NC Highway Patrol all the time on our Massachusetts State
Police freqs...especially Troop C on 42.4MHz. Also heard southern-sounding
law enforcement on the old Troop D 42.5 and talkaround 42.38.

# 3310. ANY SCANNERS THAT HAVE 235MHZ TO 381MHZ?

The desktop/Mobile Uniden 780XLT is the only one I am aware of.

Plenty of handhelds with the coverage but none with Trunking.

Had the same thing happen, posted a For Sale ad and someone found the need to go to my server's "abuse" desk and report that I had been abusing the newsgroup, propmpting a full and complete investigation in which the server looked at the group and found multiple for sale posts prior to mine, for many years, and therefore determined that the NG essentially has been in long term violation of its own charter. (Not to mention the years of foul crap about Bill Cheek and any one else who was deemed a worthy target.) If "off topic" posts are such an issue, perhaps a moderated NG like rec.guns would be in order.

Oh, and in order to keep this "on topic". does anyone have a decent faceplate for a BC760 that they would like to sell? Had a table lamp go over and cracked the corner of the panel.

The Station license can use a PO box for the mailing address, but I believe you still have to provide a location (street address) for the primary station location of the licensee. Matbe I'm wrong but that's the way it used to be....

> map centred on your location.

You should know better than to do this. Attaching binary files to messages in this group is not appropriate. Many of us have no option rather than to read this group via a slow landline and had to wait several minutes for that large 428 k file that we did not want to download. One should direct one to a program somewhere on the net. In that spirit, I recommend the following *free* program to find bearings and distances ( and also to do the reverse, find the coordinates of a point given the bearing and distance):
< http://www.mentorsoftwareinc.com/PRODUCTS/FWDINV.HTM >

# 3316. Re:do not open 572kb file if you don't want azimuth program

Newsgroup: rec.radio.scanner
Date: 2001-12-04 12:31:04 UTC
From: Mr Malcolm C Hedley <Kayakkhan@bigpond.com>

the posting in reply to re compass bearing to transmitter contains a copy of
a program azimuth..which allows the generation of a great circle map for
your coordinates..it is 572 kb so may take time to download the post..best
to skip it if you don't want it..sory for the inconvenience.

The 572kb post has caused a person to react in anger. If there are others
who find this has caused some difficulty..I apologise. I have found from
past experience that a response of help with programs etc. has led to a
flood of requests requiring repeated emails. I had expected that users would
recognise the size of the file as containing an attachment, and would make a
reasoned judgement as to whether they would downloads this post or
not...this has not been the case for one person so far ..there may be a
silent majority out there who simply didn't email me in disgust.....I
apologise once again to the group for any inconvenience this has caused.

That's funny, your post containing the program never arrived at my end...
Must have been filtered by the news provider being this isn't a binary
group... You could always post it to alt.binaries.radio-scanner if your
provider offers that group...

# 3323. AR8600 Battery Operation?

Newsgroup: rec.radio.scanner
Date: 2001-12-04 14:21:59 UTC
From: rljames@hotmail.com
Message-ID: <694cac21.0112040621.1244c5f2@posting.google.com>

I'm *thinking* about a new AR8600 but would be interested in using it on battery power. Can anyone offer first hand experience with this option?

Other comments on the radio in general?

Thanx,
Bob

/*
* Disclaimer: I Am Not A Lawyer. This is opinion, not legal advice.
*/

According to 47CFR15.214(c) there is a label which needs to be affixed
to a cordless phone saying "Privacy of communications may not be
ensured when using this phone."

So at least according the FCC, there doesn't appear to be any
expectation of privacy with such devices.

That said, I'm sure various state legislatures have standards about
evidence gathered from cordless phones.

You all know that even under the original Radio Secrecy Laws (Section
605, of the Communications Act of 1934), it is not legal to disclose
or act upon what you may hear from these devices. This is hardly a
new thing.

I would say that for all practical matters, nobody can reasonably stop
you from monitoring cordless phone calls. However, you would be wise
not to say or act on ANYTHING.

Yes, 30kHz, unless it is NAMPS, then it's 10kHz....
Some Motorola switches/sites still use this.

Hi all,

I've just purchased a Yaesu VR-500. My previous scanner was a Commtel 202 - so i'm trying to get to grips with a whole new range of frequencies! I've just got a few questions to ask:

1) I've heard you can make a reasonable HF aerial out of a simple length of wire - is this true? If so what is the optimal length?

2) Is there anyway to adjust the default recieve modes on the VR-500 - mine tends to jump from AM to WFM or USB to AM at inconvinent times.

3) My main interest is mil-air - I'm located near Exeter in SW UK. I've got a copy of Military Air Scan 2001, which has 1000s of freqs in - but it doesn't have any indication of which ones are in regular use. Can anyone suggest some "hot" mil-air freqs (USB or AM) that I'll be able to pick up in this area and hear some action on (i fully appreciate that traffic on these channels will be less than on the civil airband). I'm especially interested in freqs for the "Thursday War" navel exercise - the aircraft involved in this pass over regularly.

I'd be grateful if anyone could provide some answers to these questions - or point me in the direction of some websites that will!

Cheers,

Tom W.

Tom,

At the local library I was able to check out an excellent book on the variety of antennas. He covers what and how to build for what purpose. The title is " Practical Antenna Handbook", author is Joseph. The library had two editions on hand, I took the newer that was here, the third. You may want to check to see if there is anything newer.

# 3337. OUTSIDE ANTENNA v/s "stock antenna"

Newsgroup: rec.radio.scanner
Date: 2001-12-04 23:56:32 UTC
From: dogmarty@aol.com
Message-ID: <20011204185632.23079.00001396@mb-fo.aol.com>
Source record: 55886

Can anyone please tell me:
Does a outside antenna mount make much of a difference v/s a "stock scanner antenna"? I live on Long Island...relatively flat...in a rural area...acre lots, woods next to me on one side...and live in a wood shingled two story house. My listening range really consist of 15 miles in diameter. Right now I listen to the scanner mostly while I am on the second floor. Would a outdoor antenna + 10 feet in height really help me? And would I loose on an "over-all " frequency spectrum? Thank You

# 3338. Re: FS: SMA-to-BNC custom fit antenna adapters - Correction

I just received my adapter from Stephen Gulyas and highly recommend
this product to anyone that wants to use antennas with BNC
connectors on any radio with SMA connectors on them.Not only is this
a great product but Stephen himself went above and beyond what one
would expect.I had made a mistake on my order to him and he went what
I consider to be way out of the way to help me out.
Steve gets my ***** award.
Mike Tesznar;
KC8RRM
They are much better than the adapters you can get at the local radio
shop.They stand up much better at the base of my HT because of the extra
support he puts on them.

# 3345. FS: RS PRO-51, great condition, extra antenna

Newsgroup: rec.radio.scanner
Date: 2001-12-05 04:40:50 UTC
From: John LeMay <jlemay@njmc.com>
Message-ID: <pan.2001.12.04.23.42.49.87689.2785@njmc.com>
Source record: 55896

Hi folks,

I've been staring at my PRO-51 for a while now. I don't think I've used it more than 20 hours since I bought it - I stick with my 2005 most of the time at home. Anyhow, I'm looking for a good home for it. It's in very good condition - not a mark on the front or sides of the rig, some small rubbing marks from it being slid around on my desk most likely on the back. Definitely almost new condition. I have the original rubber duck and a RS extendable whip (the one for hand helds with the center loaded coil) that I'll include. Sorry, no box or manual for this one unless I come across either between now and then.

The specs are 200 channels in 10 banks of 20 each, "HyperScan" at 50 ch/sec, 29-54/108-174/406-512/806-956 MHz coverage, sans cellular (of course there is a work around on this rig - check google!) plus "auto search" of Weather, Air, Fire, and Marine bands.

Serial number 45002338, date code 7A4 for those interested. I purchased this rig new, so it's only a single owner model.

I'm looking for the best offer over $125 (these have been going for up to $165 or so on ebay recently) by 11 December. Bank check or money order preferred, personal checks accepted but may be held until they clear the bank. Please do not post responses here. Instead, email me directly with offers or questions at jlemay@njmc.com.

Thanks!

# 3347. FS: RS Frequency Counter, in original packaging

Newsgroup: rec.radio.scanner
Date: 2001-12-05 04:49:35 UTC
From: John LeMay <jlemay@njmc.com>
Message-ID: <pan.2001.12.04.23.51.33.981048.2785@njmc.com>
Source record: 55798

One more tonight people while I clean out the radio closet,

I also have a RS RF Freqeuncy Counter that I bought in September of '97 according to the warrantee info in the box and probably used all of three times. It is in the original box with the original manual and antenna. The warrantee slip is in the box - that expired in September of '00. Condition is truly like new since it was used so few times and stored it the original box.

The model number is 22-306 and it covers 1 kHz to 1300 MHz, has a backlight, and various settings (range, gate speed) to help capture that elusive frequency.

I think I paid $100 for this unit, probably around the original retail price of it. I'll ask for the best offer over $50 before 11 December on this one. Bank check or money order preferred, personal checks may be held until they clear.

Thanks!

# 3348. pro 2030 discrim. tap question

Newsgroup: rec.radio.scanner
Date: 2001-12-05 04:50:01 UTC
From: "Shawn M." <eagle@ez-net.com>
Message-ID: <3c0da531_3@corp.newsgroups.com>
Source record: 55799

I have been trying for a few days to get the discrim. tap to work in my Pro 2030.The problem is when I ground the jack it opens the squelch on the radio and also opens the speaker on the scanner but with a real low volume. Part of the problem is there is no place to ground to other than the antenna screws everything else is attached to the plastic case. I have put a tap in my BC895xlt with no problem but I just cant figure this one out.

Hi all,

I've just purchased a Yaesu VR-500. My previous scanner was a Commtel 202 - so i'm trying to get to grips with a whole new range of frequencies! I've just got a few questions to ask:

1) I've heard you can make a reasonable HF aerial out of a simple length of wire - is this true? If so what is the optimal length?

2) Is there anyway to adjust the default recieve modes on the VR-500 - mine tends to jump from AM to WFM or USB to AM at inconvinent times.

3) My main interest is mil-air - I'm located near Exeter in SW UK. I've got a copy of Military Air Scan 2001, which has 1000s of freqs in - but it doesn't have any indication of which ones are in regular use. Can anyone suggest some "hot" mil-air freqs (USB or AM) that I'll be able to pick up in this area and hear some action on (i fully appreciate that traffic on these channels will be less than on the civil airband). I'm especially interested in freqs for the "Thursday War" navel exercise - the aircraft involved in this pass over regularly.

I'd be grateful if anyone could provide some answers to these questions - or point me in the direction of some websites that will!

Cheers,

Tom W.

If you listen to any services with units that don't go through a repeater, it
will help dramatically with those mobile/handheld units. A wood frame house
with vinyl siding cuts singals a lot, aluminum siding , bricks or plaster with
mesh re-enforcing can cut it a lot more.

A few tens of metres, horizontal, as high as you can put it.
>
>2) Is there anyway to adjust the default recieve modes on the VR-500 - mine
>tends to jump from AM to WFM or USB to AM at inconvinent times.

No mode adjustment? I'd recommend you get a proper HF receiver
as scanners are a hell of a compromise for HF.

11175 kHz is a good frequency to start with on HF. US SCOPE Command
(GHFS) world-wide air to ground frequency. There are lots of others.
Please ask.

There's lots of this stuff (HF/VHF/UHF frequencies) in the latest edition
of The Short Wave Magazine'. Also in Radio Active.

>I'd be grateful if anyone could provide some answers to these questions - or
>point me in the direction of some websites that will!

http://www.wunclub.com and look for MilAir stuff. It's dedicated to HF
only. You'll still need a proper HF receiver to benefit from it!

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have heard that it is possible to use a TV UHF tuner and some other tricks to get a blocked scanner to pick up the 800 MHz cellular bands. Is there some way to do this using an existing TV set or VCR or both (both with UHF tuners) without dismantling either piece of equipment? Do output jacks exist on conventional TV sets or VCRs which could be used to do this?

You don't mention what type of scanner you've got. Many handheld units will freak out when connected to a good outdoor antenna because they can't handle the strong signals (particularly pagers) picked up by the outdoor antenna.

On the other hand, if your scanner has good dynamic range (i.e., the ability to handle both weak and strong signals well), an outdoor antenna will definitely help with weak signals.

Antenna height is everything at VHF/UHF. The discone is a good all around scanner antenna.

Message-ID: <3c0e7d98@news.netacc.net>
Source record: 55808

I'm considering an AOR AR8600 primarily for it's portabilty. My listening interest is varied across all bands.

Can someone please recommend a quality, reasonable performance antenna?

I'm partial to the magnetic base type which would provide greatest flexibilty between home and car. $100 limit, under $50 better yet.

Thanx,
Bob

How much activity is still on 800MHz cellular in the U.S. today? I can pick up cordless phones, but not cellular so if you can compare cellular activity to cordless I could perhaps relate. For example given any hour between 4PM and 12AM on any day of the week how many different transmitions could you expect to intercept today. How about in 2 years(your guess of course). Thanks for the info!!

P.S. I'm trying to see how much trouble is worth it trying to get an unblocked Alinco DJ-X10 in Arizona. I wonder if being a federal employee means I can get one directly from the manufacturer. Does the FCC regulation apply to Federal employees personal use??

# 3365. Trade Radio Shack Pro 60 for Trunk Tracker

Newsgroup: rec.radio.scanner
Date: 2001-12-06 02:22:30 UTC
From: "D. Schopp" <dschopp@earthlink.net>
Message-ID: <GDAP7.5925$714.483170@newsread1.prod.itd.earthlink.net>
Source record: 55816

Would like to trade Pro 60, 200 channel, wide coverage, hand held scanner for a trunk tracker hand held scanner.
The Pro 60 covers 30 mHz through 1,000 mHz. The Pro 60 has selectable mode - AM, FM, and Wide FM. Wide FM allows reception of TV audio and FM radio. Selectable mode means Military Air frequences in the 138 mHz to 142 mHz range can be received in the AM mode. Scanner also receives the military air band from 225-380 mHz which is a nice feature with the increase in military flights. With this scanner your always in touch with local events or national news.

The scanner is in mint condition. Comes with leather case, antenna, box, and copy of manual. No belt clip on the back of the scanner but the case has a belt clip.

Would like to trade for hand held trunk tracker - primarily to track Mot type II system.

Dan

Alot more cellular than cordless.

How many ?

Ok, here's a test
9:23 PM start
123456789 10 11 12
9:24 stop

12 conversations found in one minute. Analog conversations. 3 digital which I couldnt hear of course :)

>How much activity is still on 800MHz cellular in the U.S. today? I can
>pick up cordless phones, but not cellular so if you can compare cellular

First thing is get rid of the RG-58 cable, it has way too much loss. You are loosing at least half your signal with that cable. Try a good quad shield RG-6. You will hear a noticeable difference. Don't worry about the impedance miss match, your scanner will not care.

>> Hear the NC Highway Patrol all the time on our Massachusetts State Police freqs...especially Troop C on 42.4MHz

42.40 is licensed to the State of NC, but not to NC Highway Patrol. The frequency is in use by the state Department of Transportation.

If you e-mail me directly with some details of what you're hearing, we might be abe to I-D who you're hearing.

>> Also heard southern-sounding law enforcement on the old Troop D 42.5 and talkaround 42.38.

Both of the above are dispatch channels ... the vehicles reply on 42.70, and 42.58, respectively.

Of the eight NCHP dispatch centers, atleast two will use each of the channel pairs ... there are 9 channel pairs, altogether.

In my area, "Monroe" would be heard calling "H-3xx" and "H-5xx" units on 42.38 MHz.

Thanks for the advice! Just one thing - I didn't make my question about the recieve modes totally clear! The VR-500 will switch between AM/NFM/WFM/USB/LSB/CW at the push of a button. However, it has a default recieve mode for each frequency range that it jumps to automatically when you key in a frequency - and often this isn't the mode I want!

Cheers,

Tom W.

> don't notice any gaps?

I've been listening to my local city's trunked system (Motorola Type 2)
for a few months now and have never heard any "gaps", I assume that any
frequency jumping would be between transmissions. Too much of a chance
of losing something important like "I've been shot, need help at
'click' and Main".

I alkso listened to them on a non-trunking scanner, locking out the
data channel, and only lost the comversations between nike keys.

It's a simple matter of people wanting what they cannot have. Because of this, they're willing to pay an outlandish price for it.

Perfect example is the Bearcat 200XLT on eBay. This was a great scanner in it's day, but is woefully dated in 2001. It's slow, has limited channel capability, big and bulky, and won't even tune cell frequencies in the correct 30Khz steps. Yet, these radios easilly go for $150-200! If they did not have cell capability, you'd be lucky to get $50 for one.

## 3386. RS Scanner on sale ??

Howard

Your probably looking at the Pro 2053, for the price you cant beat it.
It does not have the bells and whistles of the Bearcat 780xlt but it isnt
a bad little scanner. Nice large display, alpha tagging of talk groups and
easy as hell to program. If your in the market for one, buy it.

Jeff

Does your scanner cover 54 to 66 MHz (TV channels 2 and 3)? If so,
the answer is most certainly YES.

Set up your VCR to put out a signal for a TV set on channel 2 and
attach the antenna input of your scanner to the TV set output of the
VCR. Set the VCR up for cable service and tune it to channels 70 and
up.

Scan to your heart's content. (But don't pay any attention to what
you hear or some black helicopters will land on your lawn and jack
booted surgeons will rush in to your house to implant a tracking
device in to your brain ;-)

Hi,

I would like to know if anyone knows of any midifications that I can do for Radio Shack Pro-23 and Pro-28 scanners. I am intrested in modifications like extra band coverage, increaseing the number of channels etc. Does anyone know of any modifications for these scanners ?

You can get a Uniden BC895 base station scanner for less than $200. The unit has 300 channels and will follow trunked transmissions. This radio also covers the military aircraft band of 225mhz thru 399mhz.

# 3392. STS-108 Freqs.and Launch Photos onLine

hmm. I just drove thru washington state in the US. still surprised that alot of digital towns have alot of analog too. My old town too that was pushing digital phones. out of the 666 channels. I hear atleast one per every second or 3rd channel. just doing one big sweep. Same as in washington state. Customs searched my car last night. lol. but he didn't care about the ham equipment or scanners. took a damn half hour in the cold. but. I guess he was searching for illegal stuff. but since I own legan stuff in canada. he let it go.

Hi howard. I too live in canada. if you have a chance. Buy a scanner elsewhere from RS. Due to the fact. All our radios at RS are us models. why not go buy a canadian model trunk tracker or something. You have trunking and no restriction on frequencies.

AFAIK, most trunking systems change channels between transmissions.
I can watch the freqs on my scanner and it seems to prove this.

On the other hand, cell systems jump freqs anytime and I've never heard
a "skip" when using my cell phone.

Not familiar with yours, but the default modes can be changed
on mine, particularly easy if I'm scanning from a computer
file.

Have a good look at the manual, to see if the defaults can
be changed.

As far as HF goes: you won't want to scan on HF anyway due
to the amount of noise and interference.

Maybe they read this NG,
I told the phone person that I intended to post an account of my
experiences,
to enlighten any prospective customers about what might lie ahead if they
discovered any anomalies with their purchase.

Guess what?
Today they told me it had been shipped yesterday, Dec 5, and the tracking
number allowed me to confirm this.
The person didn't know what action was taken (repair or replace ).
stay tuned for further reports.

I jokingly asked the phone guy if they had installed the apco25 chip
while they had it,
he was clueless what that was.

# 3405. Pro 94 - Storing Talk Groups????? How???

Newsgroup: rec.radio.scanner
Date: 2001-12-06 23:08:36 UTC
From: ericDONOTSPAMMEthered@eudoramail.com
Message-ID: <2duv0ugrvjjo0fm3kou1qkopl7emf1v3bc@4ax.com>
Source record: 55757

I've read the manual and all the supplements... I just don't get it...
I have programmed in my trunking freqs. The trunking works great!
This is a phenomenal workhorse of a scanner. Now, the talk group ID's
come up on the display like they should:

80 = Police
336= EMS

etc.

I am supposed to be able to store these talk groups into 1 of 5
talkgroup buckets for each bank. I can't figure out how to do it, and
then only recall the talk group I want to listen to. I think I need
step by step instructions to get this down the first time.

Thx

Can anyone confirm that this actually works? I've been doing a lot of research and the FCC is being a REAL hard ass about this cellular nonsense. They are so picky that they now stress a scanner should NOT be easily modifiable, and this program seems to qualify as "easy" to modify the X10. So I would be concerned that A1inco has made a modification that makes this program useless or are going to make one that will soon.

To be honest I'm more upset about paying over $400 dollars for a device that's "broken". In my opinion a communications receiver that can't pickup frequencies within it's range of coverage IS in fact BROKEN! I'm also upset about what prompted them to be such jerks about it(some political screwballs), and the fact that they would invest so much effort into stopping people from listening to the neighborhood whore talking on sex lines, when we have so many MORE IMPORTANT things that need attention. I don't want anything to be blocked! If I'm willing to pay the big bucks, and want to get a full product, NOT a Ferrari which can only be driven on certain roads!!?? I'm sure the rest of the world is again laughing at us(although they are also green at the same time) with our so called "freedoms" . . . HA HA .. .

> The product was not "dumned down" it was restricted from public sale.

It was not restricted from public sale . . . that's why it WAS "dumbed
down", so it COLD be sold in the us. All radios sold in the US suffer from a
reduction in capacity(dumb down) in order to be sold legally. What is
illegal is to NOT "dumb down" your radios, or for the consumer to take his
"dumbed down" radio and "smarten it up" to recive the blocked cellular
frequencies.

> Your argument is purchase or remanufacture am illegal product because

I was listening to the scanner this evening and heard traffic from WFLD AIRFOX on their frequency to the newsroom. It was interesting listening while they were trying to locate the scene of the shooting in Goshen, Indiana. Alot of traffic about navigation to the scene and antenna alignment. Also talked about whether the video was being used LIVE. Later they were transmitting the video as they got back closer to Chicago.

My question is if anyone has a definative list of frequencies to monitor these types of communications in the N. Indiana/Chicago area, for other broadcast stations. Also any freqs for State Police or County Helicopters in the Chicago area. Any frequencies or links to freqs would be appreciative. I do not need aviation frequencies. I am looking for the business or public safety frequencies that they use to communicate with their dispatchers or newsrooms etc.

The frequency that I have for AIRFOX is 450.125mhz

Hello Everyone,

It seems I just can't get the hang of Trunk Tracking or at least I don't know how to tell if my scanner is really tracking the trunk. I have a Pro-92 and everything seems to program properly, according to the instructions. When I hit SCAN, I can't tell any difference in Trunk Tracking and regular Scanning. I have only the local Police, EMS, and Fire Dept freqs and talk group codes programmed, so I'm not scanning a lot of freq's. How do I know for sure?

What is the Control Channel used for?

Thanks in advance for your help,
David Honeycutt

Who said it can't? It can, just as soon as the software is release...which
is suppose to be the end of this month.

My Pro-62 is SEVEN years old and now that I have seen the new ICOMs, and the Alincos I have regained GREAT respect for my GRE radio. They REALLY don't make them like they used to. Those new radios are plain embarrassing. What have they been doing in seven years!? Considering how quickly technology moves why is the R10 and the X10 all we have to show for nearly a decade of development.

I feel like they have simply added a few new features, while at the same time they have reduced others. Simple things like squelch. I mean if it's not broke don't fix it! I have never had a problem with my squelch controls, but now ICOM want to do give you non-dynamic squelch with only 9 settings, and other radios want to do squelch automatically?? And all these little tiny radio?? Yes it's "neat" but where will these radios be in ten years?? Still functioning? 4 batteries instead of eight sounds "cute" but that means less power and smaller speakers, which amounts to wimpier radios. These radios today are designed for bedtime monitoring unless you are using headphones. And the search speeds are ridiculously slow or useless.

What I REALLY want is a Wideband Pro-62! Forget all that PC link stuff, and more memories, and smaller steps . . . just give me more coverage and I'm happy. Don't get me wrong, all that new stuff IS really cool but I'm trying to be objective and what's important is being able to monitor as much as possible, and having quality on your side. Once you have delay/lockout/Priority and atleast 200 channels you are good to go!

Broadcast stations use Broadcast RPU frequencies.
The Band is 450-451 & 455-456 with 12.5Khz Spaced Channels.

You will hear 2-Way and Broadcast audio on these channels. Normaly you
when you hear a repeater in the band it's 450 out and 455 In.

Their is a group of 150 & 161 Mhz range channels but they are generaly all
Radio stations and are genrealy not in as much use as the UHF channels.

TV & Radio stations can use any frequency for 2-way, some of the UHF
channels allow for High Deviation and Wide channel spacing, not use much
any more. They could pass 15Khz audio on these channels but most stations
use narroer channels and limite audio to like 7.5 Khz.

Hope that helps
Ron

Howdy all,

Ok, I was driving along a road, when I come upon a barn with bazillions of antennae sticking every which way, and about 5 larger sat. dishes. Then I saw this antenna that was weird lookin'.

It looked like a rectangular sat. dish, but the "dish" part was made of a mesh or something. It had all the parts of a sat dish, it looked like, but the "dish" was meshlike.
Any ideas/pics? Can it be used for scanning? Or is it just a satellite thingy?

Thanks

John Y.

When you are in trunk scanning hit the SRC key then hit the program key ,you can then scroll
throuigh the 5 banks with the up or down arrows, 10 talkgroups per bank. Anyway
stop where you want to put a talkgroup number make sure PGM is lit on the display then enter the talkgroup number and hit E.When done hit SCAN. Now you can hit keys 1-5 to scan the banks you want. Make sure its an active talkgroup or youll get an error MSG.

I got this dang radio Sunday and I think Im finally figuring it out.Really rather simple after you do it a few times. Now if I can only remember how to do it in January.

Good luck

Kurt

I'm about to replace my 9-year-old Motorola P50s (VHF) with some new SP50s,
and I'm curious to know how UHF compares to VHF. Any clear advantages to
one or the other that should influence my decision?

Thanks.

it jumps modes cos its supposed to, in my experience Yaesu have got this
spot on, AM for air, WFM when in broadcast etc, if your changing it then
your switching it to the wrong mode for that frequency, the only time you
have to change is to select SSB for hf as it tends to select AM, anyway turn
this feature off if you dont like it, AUTOMODE in setup menu.

writes

>My Yupi MVT7100 has suddenly taken to "forgetting" stuff if removed from
>power. Is there a User serviceable (read non-technical person popout old and
>popin new) battery somewhere inside?

The use a 5.5v, .22f backup capacitor for CPU/memory retention
so that may be the problem.

It is a horizontal PCB mounted component and whilst replacing
it not difficult does require disassembly and
de-soldering/soldering skills - not "popout popin" (tm) technology.

Suitable replacement:

Panasonic Gold Capacitor SD Series
Panasonic # EECSOHD224H

We normally have them available but other sources include:

UK: RS Components http://www.rswww.com
Stock# 377-388

USA: Digikey http://www.digikey.com
Stock #: P10788-ND (I think a min qty may apply with them)

Unfortunately, my scanner does not cover this band. 54-108 MHz is
blocked.

# 3430. Yupi MVT-7100 AM Filter Mod?

Newsgroup: rec.radio.scanner

I have one of these, and it's really a great little set. I have heard that a German company (Bandercom?) had a mod for it where you could use the SSB filter in AM mode. That would make a great little set even better. Does anyone know about this?

## 3432. NBC's "open carrier" screwup last night???!!!

Newsgroup: rec.radio.scanner
Date: 2001-12-07 14:27:34 UTC
From: "Orlando(320th TRS)" <slyvp@hotmail.com>
Message-ID: <ql4Q7.18008$MX1.5750364@news02.optonline.net>
Source record: 55783

I was listening to NBC TV audio last night in New York when I started to fall asleep. I was awaken by a feeling that something was now strange about NBC's broadcast, and later figured out that it was much softer(volume) than before and the "commercial" being broadcasted seemed really strange. As I regained more cociousness this is what I heard:

"standby camera 2" . . . "Take 2" . . . "get closer on him" . . . "standby 404" . . . "go 404" . . .. "fade"

I jumped out of bed and turned on NBC, realizing that this was NO commercial this was a live broadcast of what souded like a producer at NBC studios directing the News brosadcast ladst night. I confirmed this with my TV. His commands were being instantly coformed with tright in front of my eyes on TV!!! Cool!! That's what scanning is all about. I did'nt just listen to the lousy newscast . . . I visited the studio and stood next to the crew!!

5 minutes later I heard "Is the ?? on . . . ah . . . Oh I must have bumped it . . ."."CLICK".

I'm curious though. I'm miles away from NBC studios, and could olnly "theoretically" hear a repeated sgnal from here, so how could I heard a transmition from the studio? Any equipment that the prodycer would us would be low power, and I did't hear this stuff on my TV, so what the hell was I listening to? What kind of equipment, and how did it get patched to something that could reach my scanner?

I don't know what frequency you were tuned to that night. I have heard the directors talking to remote crews on 450Mhz radios and the crews and reporters talk back through the already established microwave link. This works because the links are up til they tear down. This is what i've heard occasionally in Philly.

For me, it's not a case of being lazy. I use the computer software to program the scanner when I am cross country on vacation. I used to program and reprogram, by hand, for the weeks that I was on vacation as I headed into other areas. Now all I do is upload the file. What use to take up to 45 minutes, now takes 2 minutes. 500 channels is a lot to program. Yes, we Americans are lazy. That's why we have been cleaning up and fixing the Pentagon and Trade Towers non-stop for almost 3 months now. That's why our military (me), are constantly out fixing the problems of the world. Perhaps if other countries would get off their butts, and take responsibilty for their actions, I and other military men/women could count on being home. Especially on the holidays and other family get togethers. I am luck enough to be home this year.

I have a set of frequencies programmed into my scanner for the Chicago stations. I understand a few stations are starting to use cellphones and Nextel for these types of transmissions but I still do hear some conversations on the radio. There are several frequencies for each station. I have frequencies from the NX (News) Assignment desk that dispatches crews to different shoots. I do not hear much there these days so I assume that is a big place where they are using Cellphones. Also there is usually a frequency for technicians or Master Control(?) where you can hear the studio control room setting up the microwave links from the trucks. Some conversations here will consist of Power Up or Power down, Low Power etc. You can also hear them aligning the antennae with phrases like BUMP IT, BUMP IT or Pan or Tilt. and MORE MORE MORE and then STOP. These convrersations can get intense up to a few minutes before broadcast. Feeding of tape etc. in the minutes before they go live. You probably heard an open mike on the directors radio as it was tuned to one of these frequencies. What you might have been listening to was a frequency that is used to send audio from the broadcast to the field so the Reporters can get their cues from the Anchors (the little plug in the reporters ear). The director may have had his radio open on that frequency.

One night I heard a conversation where one crew had to bicycle (courier) their tape from one location shoot to a remote truck at another shoot completely accross the LOOP in Chicago. The reporter or producer(?) got to the neighborhood but could not find the truck. I guess it should be hard to miss a van with a 20+ foot boom on it. The panic and anger started to get intense when the minutes ticked away. I have also heard the director conversing with the truck setting up live shots with camera directions and cues.

Last night I heard the most interesting transmissions yet. AIRFOX from WFLD-32 the Fox Affiliate in Chicago was over Goshen, IN trying to get footage of the factory where a shooting took place. The Helo was having trouble finding the scene as the sun was setting and was given geographical directions like locations of a lake and RR tracks to help him find the crime scene. They then continued with directions and cues about shot selections and other tech info about alignment of the microwave antenna and opening of the camera's iris.

There are also a couple of frequencies that I have on the Aircraft band where news helos communicate with each other. I am still waiting for my opportunity to heare some of that. I once saw 2 news choppers flying over my house from competing stations when they were following a police survailance of a suspect. The helicopters got very close to each other as they took turns shooting the cars. They often take turns and switch places back and forth. These two choppers looked like something out of a war film dogfight. I wish I had my camera as the one flew a circle around the other at a fairly low altitude. This is what these other frequencies are supposed to be for, so they can coordinate their movements with each other to keep out of the way and causing a

catastrophy.

Media frequencies can be fun and interesting. Especially during the day when they are shooting alot of tape and when they get close to the time for the broadcasts. Personally, I love listening to them. Sometimes you can feel the stress in the air. This brings to mind the example of the movie Broadcast News where the tape gets delivered to the newsroom with 0 seconds to spare before the director cuts to it

http://www.wiscomm.com/media/index.htm (Check out this link for a site devoted to media listening. I believe there should be a link to info on NY media frequencies) I would also like to note that Shadow Traffic, here in Chicago can be interesting. Might be interesting in NY also. They feed traffic info to the newsrooms and can somtimes be heard feeding finished live traffic reports to radio studios.

Tom,

The six meter ham band (50 to 54 MHz) is near 42 MHz. It is a popular activity among some hams to try and talk over long distances on six meters using an atmospheric phenomenon called "Sporadic E".

Check out this web page:

http://www.uksmg.org/sporade.htm

for more info go to www.google.com and enter "Sporadic E"

Have fun!~

Craig Davidson

No work=no pay and you are lazy. If you were not lazy then this would
have never happened.

>That's why our military (me), are constantly out fixing the problems of the world.

Like replacing the Taliban because they cut back on growing the CIA's
opium supply? Or by replacing the Taliban because Unical and the Bush
family couldn't work out a deal for the oil rights and pipeline across
that country? They hoped to work out a deal with the Taliban and
that's why that country was never put on the terrorist list all these
years. Not only are you Americans lazy, you're stupid as well.
LOL!!!!!

>Perhaps if other countries would get off their butts, and take responsibilty for their
>actions, I and other military men/women could count on being home. Especially
>on the holidays and other family get togethers. I am luck enough to be home
>this year.

Why? We don't have a stake in the oil and opium trade!!! LOL!!! That's
what and who you're fighting for. I bet you are naive enough to think
you were fighting for America in the Vietnam war? What you were
fighting for was for the CIA to take over the "Goldon Triangle" drug
supply since the French moved out. Americans= dumb and lazy.
That may be due to your drug use. LOL!

I've heard the same thing here in Sydney Australia.
It's called IFB . Interupted Fold Back.
They use it to cue outside broadcast vans, feeds from helicopters etc. The
IFB here is on UHF, VHF and lately by cellphone.

To clarify something in my post, as you said, there is a frequency that is used to cue the vans etc. This channel carries the audio portion of the programming and is often turned on shortly before a broadcast and stays on a little after. Some stations run this channel 24/7 or during their entire news cycle. Here in Chicago there are a couple that will turn on at around 3pm and run till about 11pm through the 4 5 6 and 10:00 programs, than will turn off during the night. Another, I have noticed will always be on. I have seen this channel referred to as CUE or TALKBACK. This, as I understand is not the same as the audio channel for the station. I would imagine it is possible that the DIRECTOR might have left a control room mike on this channel open and been sending the camera directions over the air along with the audio feed of the broadcast. As I mentioned, the reporter will be listening to this channel through his/her earpiece and will be able to hear their cue from the on set anchors. Also, the director can feed the reporter a cue or direction via this frequency while the reporter is doing their standup or report. That might also explain why the director could be heard along with the audio of the program.

If as mentioned by another writer, this was the audio channel for the station than the original poster would have heard the camera directions on his TV as well as on his scanner. I am unclear of whether he heard the directions on his TV but if the directions were only coming over the scanner than it could be possible that he was listening to a cue channel

Can anybody point me in the right direction? I am going to take the advise here and install an outside discone antenna on my house. I have found plenty of people that sell the antenna itself, but I need a hardware kit to install the "mast' on the eve of my roof peak. Who sells this stuff?

Thank you for replys!

Icom R71A Shortwave Communications Receiver

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1304276775

AM/FM/USB/LSB/CW/RTTY
100kHz - 30MHz
Quadruple Conversion
Dual VFO
Wide/Narrow Filters
Noise Blanker
Preamp/Attenuator
Notch Filter(modified to work in AM)
32 Memories
Phones/Record/Ext Speaker Jacks
2 Antenna Jacks
Plus Schematic & Software for Reprograming unit

Unit is in perfect working order, Front panel & Display are like new no scratches
A few minor scratches on bottom of case

Included are printed versions of Manual, Service Manual, Schematics, Parts layout diagrams

On my frequency list for my local police...they refer to two frequencies, each in the 900mhz range, as "microwave link"...what are microwave links?

# 3452. Re: NBC's "open carrier" screwup last night???!!!

> reporters talk back through the already established microwave link.

The only thing was you are talking about an on location or in the field production which would naturally be broadcast long range. What I heard was internal studio stuff which should be low power. To be honest I think it should have only been hardwired direct to the crew within the studio. The last portion of the audio definitely points to an accidental activation of a high power COM link. Probably something like a switch that toggles the source for their broadcast that I pickup SEEMINGLY separate from what my TV picks up. He probably switched the source from "program feed" to "studio feed" . . . that's my guess anyway.

My thinking exactly.

> This sounds confirming by the fact that you heard exactly the
> same thing on the TV,

Nope. The TV broadcast was fine(confusing me cause I thought I was listening to the same signal on my scanner as on my TV). What I said was that I could see "visually" what I was hearing. On TV EVERYTHING was normal, only I had ESP. I new everything seconds before it happened. On my scanner I heard "fade", on TV I SAW a fade. So it was basically like watching a live feed from within the studio where you can hear the director talking.

> and that the "live mike" went away when the
> producer discovered it. If you happened to be tuned into the
> producer's radio, you would have continued to here the "behind the
> screens" conversation even after the click.

The producer's radio would not be heard from 30 miles away unless on a repeater, and I don't think they would repeat an internal communications device. I also don't think a producers radio could broadcast on the same frequency as their FM TV broadcast that I hear on my scanner. The question is what is this TV broadcast signal that I'm listening to on my scanner from miles away, and how could an open mike in a studio have access to this frequency?

Are you referring to Interruptible Feed back(IFB)? If so that is a direct
2-way broadcast from studio to the talent. It would NOT be an open carrier
type transmition. The sound was very ambient, almost like a signal from a
"bug" or hidden mike. The producer was obviously several feet from the mike.
IFB would also not generally be broadcast for 30 miles, unless they are
shooting remotely.

You hit the nail on the head . . . I think. I'll definatly by that this was a que channel. This actually explains a whole lot of things for me beyond what happened last night. It explains why my scanner only picks up 1-2 TV channels. Probably becuase my Pro-62 does'nt pickup TV, but it DOES pickup 450MHz which COULD include a 24/7 "cue" channel. Since this is NOT the TV frequency it is understandable that this transmiter could toggle between the "Cue" feed and a "live studio" feed(what I may have heard). Guess I'll have to wait for my Alinco X10 to hear the REAL TV feed . . . 70MHz??

Point to point control links, usually from a dispatch center to a remote transmitter site. It could be just a constant duplex link for one service or (quite likely) a multiplex system (many SSB channels on the FM carrier) with many different base stations being operated. In this case, you would need a shortwave receiver capable of single sideband reception from 0-10 Mhz connected to a scanner disciminator output.
In the old days of C-band satellite, there were a couple of satellites that carried phone calls & other things that could be picked up the same way - with a sideband SW receiver hooked to the baseband output of the sat receiver.

I'm not trying to flame anyone here, but how is rebroadcasting rec'd
radio signals legal? Don't the monitoring-related laws state that you
cannot discuss or retransmit info that you hear on a scanner? Obviously
people in the hobby talk, but how do folks and commercial orgs like yahoo
get away with retransmitting these signals?

I bought for 27 dollars a 5inch heavy duty magnetic mount for a cb antenna (the kind with the socket to screw in a 102inch whip etc.. I then got some aluminium foil and rolled it up, inserted it into the hole and cut it to about 3-4 inches and tuned it with scizzors when listening and till the bars reach max signal) trunked systems that only had 2 bars now get all the bars on my 780xlt. huge difference the reason it works so well is the 5inch flat circular magnet base acts as a groundplane to the antenna.

that is what a maggie mount usually does.
acts as a ground plane.

I have never heard of the IFB reference as mentioned but I do know there are channels used as continuous feeds of the audio of the broadcasts. I can't tell which frequencies are used right now as they are not active overnight but they are in the range of 450mhz and 455mhz to 465mhz, approx. Also there are some here that are in the area of 161 and 162mhz. As I mentioned in my posts, the frequencies mentioned here are set up to give the talent in the field a heads up on what is happening in the studio and give them their que to when to start their reports. It would stand to reason that they would be sent out over a repeater as many news crews set up live shots many miles away from the station. Here in Chicago a Sports crew could be set up for a live shot at The Bears camp in Lake Forest which is about 30 to 40 miles away from the stations in the city. The talent has a radio that is fed to an earphone in the reporters ear. The Director has a radio in the control room that he/she can use to communicate with the reporters and remote crews. On one frequency, the engineers and other technicians will assist the trucks in setting up the microwave links and other technical settings and levels and will tell the crews when they are due up. For example a crew might be told that their live shot will be at 22 minutes into the show and they will have 35 seconds for their standup. Then, the reporter will listen to the audio feed to hear the anchor introduce their segment. This is where they then get their cue to begin their report. If need be, the director can also key in to tell the reporter information about rolling of tape etc. and to cue back to the reporter after the tape is completed or ask for certain info on the que channel. This is also how, as you may have seen before, the Anchors can then ask a reporter a question about the story and follow up for more dialog and conversation.

The camera cues are done through a hard wired intercom in the studio but if the directors 2way microphone, in the control room, was stuck or toggled open during the audio feed you might hear ambient sounds from the control room over the audio feed. The director telling the Technical Director "Ready 2, Take 2" or other directions would be heard.

If you heard this on the scanner and not on the TV, this would be a likely explaination. Also, as I recall, you said that the camera directions were ambient as if the director was several feet from the mic. That also leads me to believe that the audio feed was the intended signal being transmitted and the camera directions were background traffic from an open mic. The microphones on the directors radio could be momentary push button on off buttons that would be keyed as you speak. Or they could be voice activated or even a toggle that can be opened long term for a longer transmission. Some systems may even have a switch between the three so that a director can select whether he wants to lock open or use vox or push to talk.

A few years ago when WABC-TV carried the NYC Marathon, I used to hear the director giving commands as to which camera to put on air and how to set up the shot. This was over one of their 450 MHz freqs. Since there were many cameras (on motorcycles, helicopters, etc.) it was very interesting to listen to the commands and watch the results on TV. The director was quite a highly stressed guy and a his screaming and profanity made it very entertaining!

In the case of the marathon, the director's instructions had to be heard by the people in the field, so it was transmitted via repeater. I was able to hear it even though I'm 40+ miles from Manhattan.

The advantage of UHF is that the smaller wavelengths work better inside of steel buildings. Also, an antenna of a given size will have more gain.

The disadvantage is somewhat greater path loss. Every time you double frequency, free space path loss quadruples. Losses in cables are also greater.

Are these handheld transceivers?

# 3478. Emergency Situation Report e-mail list for Pennsylvanians

Newsgroup: rec.radio.scanner
Date: 2001-12-08 15:08:05 UTC
From: pasitrepnospam@pa-sitrep.com
Message-ID: <3c122ca2.397501698@news.city-net.com>
Source record: 55724
Cross-posted to: rec.radio.scanner,alt.radio.scanner

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site that I run at
my personal expense..

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
manhunts, and Amateur Radio Emergency Net
activations.

The PA-SitRep message posting protocol
caters to the users of text messaging capable
digital cell phones as well as users of regular
internet e-mail. Messages posted to the list
may be recieved with just about any digital
cell phone which allows PA-SitRep subscribers
to keep up do date with MAJOR emergency
situation reports posted to the list while mobile
or away from other news sources such as TV
or radio.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.
Subscribers are also encouraged to post major
emergency situation reports that directly relate to
Pennsylvania, but posts must consist of confirmed
and accurate information.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time.

If you'd like to subscribe, please visit the
following address:
http://pa-sitrep.com/mailman/listinfo/pa_pa-sitrep.com

For information on how to use your Digital
cell phone as a text pager, please visit the
following address:
http://www.pa-sitrep.com/cell.htm

Thanks. We'll look forward to your participation.

David Kleber, KB3FXI
Pittsburgh, PA

In free space:

Path Loss (dB) = 36.6 + 20 Log D + 20 Log F

where:
D = distance in miles
F = frequency in MHz

Microwave comms are NOT impossible. The good news is that as you go up in
frequency, it becomes easier to get more gain from your antennas. This can
overcome the increased path loss.

A 36" dish on 10 GHz yields about 30 dB gain. If you have 36" dishes at EACH
end of your 10 GHz circuit, you have 60 dB total antenna gain. Try to match
that at VHF!

This looks like the formula for parabolic dish gain and seems out of place
when talking of VHF/UHF HTs, nor would any other antenna gain discussion be
if we consider radiated power--which is the way I took it (as the
discussion seemed focused on frequencies and not antennas).

How can you confuse the equation above with a "parabolic dish gain" formula?
Does it mention dish diameter? No. Does it mention anything about feed
```

horns? No. Does it mention anything about "spillover loss" or edge taper loss? No. Does it even mention the word gain? No.

It is the free space path loss equation. This equation is the starting point for any discussion of range or link margin. When designing a communications system you have to take into account transmitter power, receiver sensitivity, as well as the antenna gain and feedline losses at each end of the circuit. But the basic problem is overcoming the path loss between the transmitter and receiver sites. Once you know the path loss, you can come up with various combinations of transmitter power, receiver sensitivity and antenna gain to meet your requirements.

Frequency has a significant impact on path loss. For a given amount of power and antenna gain, the received signal will decrease by 6 dB if the frequency is doubled. That doesn't mean you shouldn't use higher frequencies. It usually means you have to increase your power OR use higher gain antennas. Since antennas become smaller as you go higher in frequency, that's usually the way to go.

The site below might help you understand this:

http://www.waverider.com/en/techsupport/training/basics.html

See the paragraphs on path loss and the "6dB rule." Note that his formula is based on distance in km and mine is based on miles (so the constant in the equation is different). He also writes the formula as 20 Log 10D and 20 Log 10F (meaning base 10 logs, not multiplying by ten!).

If everything else were the same, probably yes. But if you're VHF handheld is using a small, inefficient rubber duck, and the UHF unit has a more efficient antenna (could be the same physical size), then maybe not. You also have to consider the amount of co-channel interference on the two freqs. Also the power output of the units and the receiver sensitivity. It's never simple. ;-)

It jumps receive mode cos its supposed to !
and Yaesu have got this spot on in my opinion, it VERY rarely picks the
wrong mode, if your changing it then you are doing something wrong "!

If you want to stop it from doing this then use the AUTOMODE option in the
setup menu..

Source record: 55745

If you trace the 3rd wire back thru the board, I think it
goes thru a small inductor, then to a small 78LO5 5-v
regulator in a T-92 case. The cap in question should be
across the output of this regulator and ground. The cap u are
looking for is on the right same side of the board as where
the power leads enter.
Look for a chip marked MC3359 or MC3361.
Then do a search for "discriminator tap"

RatShak should still be able to get you the service manual
for this, which shows both versions, Also you can look up the
parts list online and get the value of the cap that you need to replace.
If I can find MY manual, I'll post back here......

# 3493. Re: UHF vs. VHF

Newsgroup: rec.radio.scanner
Date: 2001-12-08 19:45:07 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3C126DC3.627E6D8F@optonline.net>
Source record: 55647

The equation that Art Harris references is the so-called Friis Transmission Formula. It is based on transmission between a transmitting antenna, and a receiving antenna, where the receiving antenna is assumed to have zero gain above a dipole.

Now, a dipole has an effective aperture which decreases as the inverse square of the wavelength. So, as the frequency increases, the dipoles aperture decreases, and this accounts for the term 20logF in Friis formula.

A handheld, with a quarter wave rubber ducky antenna, behaves just as the Friis formula describes, since the quarter wave antenna at 800 MHz will have 1/16 the aperture of a quarter wave antenna at 200 MHz.

The Friis formula can be overcome to an extent by using a dish with a constant size as one increases frequency. The problem is that the dish becomes more directional, and hence must be aimed more accurately. Further, as the wavelength decreases, the dish must be made to increasingly tighter mechanical tolerances. Thus, there is a practical limit on the gain of a dish.

Hope this helps. For more information, do an internet search on "Friis Transmission".

There is "handshaking" before the swap-off between cell-towers
takes place, so there should be no gaps.

# 3495. Re: Radio Frequencies for Dawson Creek

Newsgroup: rec.radio.scanner
Date: 2001-12-08 20:04:51 UTC
From: Dev <.>
Message-ID: <9utr6601ums@enews1.newsguy.com>
Source record: 55649

not for anything protected.
I for some reason forgot where Dawson Creek is. it is in the kootenays. or more up north.
I usually don't disclose the frequencies for BC. But here it goes.
If you are outside of Vancouver or the Lower mainland. These will usually be the frequencies used. from the Okanagan (Penticton, Kelowna and area), Then kootenays (Nelson, Castlegar, Trail, Creston and area), and Most places up north. repeaters are usually in these places. except the cdpd Digital encrypted laptops that some towns have in their cars that are on the un used cell channels, I repeat. encrypted. They have bought out a few more frequencies but I forget what they are off hand.

139.2450
139.3200 (Not too common, slowly being used)
139.3500 (New to most area's except the connector in the okanagan, Now used in other towns)
139.5000
139.5300
139.5600
139.5900
139.6500 (New to most area's except Vernon area, Was tested in a few towns)

the links in the 400 Mhz area are usually always keyed up. so not really a point to listen to them.
Most used only 1 tact channel. even though they own more.
tact 1 is usually always used of 139.0800

The BC radio scanner book that few radio shacks still got here in BC will probably be somewhat out of date for frequencies for the rcmpo. Due to the fact that they have changed alot of the frequencies. But all depends. my old town and other area's they still have used the same freq's for years now. As I stated above. there are now atleast 2 or more repeaters that I do not know yet. I will find them out soon. But their repeaters are spaced 30 Khz apart from 139.32 past 139.65.
They only own 4 tact (Simplex) channels though. Remember. These freq's will only work for anything outside of Vancouver and the Lower Mainland.

## 3497. 900 MHz cordless phone frequencies?

Newsgroup: rec.radio.scanner
Date: 2001-12-08 21:15:45 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10112081410320.8594-100000@srv1.calcna.ab.ca>
Source record: 55650
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I was looking on the www.totse.com web site and they had a list of some of the Panasonic cordless phone frequencies. The base and handset frequencies for channels 01-11 and channel 59 were posted (e.g. channel 06 has a base freq of 902.250 MHz and a handset freq of 926.250 MHz) but they did not post the freqs for channels 12-58 inclusive, leaving symbols in indicating that it was up to the reader to fill them in. To me, there was no obvious pattern to the existing frequencies, and consequently no way to fill in the missing ones. What are the missing frequencies?

Thanks in advance,

Ian Douglas

I agree that was a assumption on my part that this was the source of the confusion and you are right that it would indeed have been a great confusion. I should have recognized the equation/
...
> Frequency has a significant impact on path loss. For a given amount of power
> and antenna gain, the received signal will decrease by 6 dB if the frequency
> is doubled.

I understand by the follow-up to your reference that you were just referring to loss due to the radiative pattern of the dipole. The part that threw me is to call this the Free Space Loss when in fact it is not a loss in free space but contains terms due to the way the antenna radiates. In fact, free space itself does generate a loss based on frequency, as I know you agree. In any case, I think this effect is probably secondary to other effects (not modeled in the equation) which you have mentioned.

The Vancouver City Fire department went Cryptic Digital joining the cities police making scanners useless in the city. Some of the Radio Shack stores have pulled all or most of the scanner stock because of falling sales. Many other cities in North America are following suet so the days of listening in to the action are numbered for all. My scanners make great expensive paperweights now. Think twice before you spend more then $100.00 on a scanner that it will only be a matter of time before you can't listen in on the fun stuff.

I haven't heard about Victoria. I do know that the system is very expensive but coming down in price as more cities jump on board. I have heard that Calgary and Edmonton have or are about to change. So it will only be a matter of time. Talking to a friend of mine who was telling me that the BC Sheriff service has contacted his company about setting up a scrambled analogue system with the consideration of switching over at a latter date. One thing I have noticed is that the freeway patrol and Burnaby fire is still analogue but I do imagine that their change is coming.

>

Well, not exactly. For one thing, the path loss equation above assumes
isotropic radiators at each end of the link.

But let's take a specific example. Two space ships in deep space are 100
miles apart. They are operating at 400 MHz and each has a resonant 1/2 wave
dipole. They each radiate 100 Watts of power (50 dBm). The received signals
at each end will be -74 dBm.

Now they switch to 800 MHz and switch to resonant 800 MHz 1/2 wave dipoles.
Radiated power is still 100 Watts. The received signals at each end will now
be -80 dBm. That is 6 dB weaker (1/4 as much received power as before).

If we did this same comparison at 8 MHz and 800 MHz, the difference would be
a whopping 40 db!

The increased path loss at higher frequencies is due to the fact that
capture area (a.k.a. effective aperture) for any antenna type of any given

gain is proportional to the signal wavelength squared.

Let's look at the real world. AM broadcast stations at around 1 MHz typically use 1/4 wave verticals. FM broadcast stations at around 100 MHz typically use stacked bays with several dB gain. Microwave links typically use parabolic dishes with lots of gain.

So you can see that the increased path loss at higher frequencies is usually offset by the use of higher gain antennas.

Then it's only a 3 bar-gain antenna not a high-gain antenna.

# 3510. BC895 Fails to Acquire Data Channel

Newsgroup: rec.radio.scanner
Date: 2001-12-09 03:24:40 UTC
From: Pete Ritter <cpritter@attbi.com>
Message-ID: <YPAQ7.18946$L51.42515@rwcrnsc54>
Source record: 55661

My recently-purchased BC895XLT occasionally fails to acquire the data channel on a local trunk system. As a result, it forever scans the channels of the system, never stopping. It pauses for about a second on two channels, but resumes scanning. If I manually tune to these channels, they appear to be data channels. Do trunked systems have more than one data channel? Also, if I scan this system's channels with IGNORE DATA enabled, it does stop (for ever) on the two data channels as if it does not recognise them as having data.

This appears to happen only on a particular trunked system. I have the squelch control where the manual says to put it for trunking. The freqs I have programmed are right out of the guide accompanying the scanner. As I said, this happens occasionally. Most of the time, the scanner locks on and works fine on this trunked system.

Anyone know what's wrong?

In trying to clarify this in my head...Is not the loss essentially at the
receive end if I start with effect radiated energy?

Sounds to me like you are missing a few freqs. If you got them from a guide, the information is likely out of date. Our local trunked system moves the data channel every few days, and if that new freq isn't programmed, it will scan and not stop till the cows come home (or pigs fly)!

## 3513. Newbie questions odd dipole

Newsgroup: rec.radio.scanner
Date: 2001-12-09 04:02:52 UTC
From: Peter Ferraro <"pferraro at charter.net">
Message-ID: <u15oq1rpjudg30@corp.supernews.com>
Source record: 55664

I found a web site that uses two tuned handheld rubber ducks mounted opposite each other to form a dipole antenna. They sold it as a horizontal setup, doesn't seem to be as efficient as vertical. My limited understanding of antenna design tells me horizontal would only help me if the signal I wanted was "in the sky".

I was wondering if anyone in the group had ever evaluated this type of setup, or if they have an opinion.

I need something that can be hidden and I listen exclusively to RR.

tia,
pete

It actually follows from simple math and ohm's law.

When you double the frequency, you double the rate of field change per
second, which doubles the induced voltage in the medium doesn't it?
Induced voltage is proportional to the rate of magnetic field change
isn't it?

For a given impedance, that doubles the induced current. Since the
Resistance portion of the impedance does not change, doubling the
current does in fact double the loss. There is reason it is called
I^2 R losses....

And it isn't so much that UHF works better in steel buildings, it is
actually a pretty straight forward transmission line problem. The
longest wave that can propogate through a wall is one that is roughly
4 times the spacing between the steel bars. Make a wave guide
narrower than 1/4 wave, and energy won't propogate down it.

# 3516. Re: NBC's "open carrier"

Source record: 55668

Tonight, out of curiosity, I listened to one of the local news broadcasts via the cue channel that I mentioned earlier. What I heard was a continuous feed of the audio of the broadcast. As if it were the audio broadcast channel. Intermittently, during the newscast, the director keyed in to cue the reporters in the field. "2 minutes to open.", "Ademle is ready" "30 sec to Ademle" The director keyed in momentarilly with cues about rolling tape and standbys etc. You could not hear camera cues. You could only hear the cues meant for the remote crews about their timing and tapes. If the director's 2way mic had been clicked open and he was not speaking directly into the mic you would have heard the ambient conversations in the control room. The frequency is referred to as Talent Talkback and is on 450.4875mhz. I live a good 20 miles from the WBBM studios and it was strong and as clear as a bell. In this case, when the director keyed up the audio feed was interupted. I have heard on other channels though, that the director actually talks over the audio. I guess there may be variations in how they may wire in their mics for these 2way channels. I hope my observations have shed some light on what might be going on with the frequency you are listening to.

I have found it very interesting to listen to these channels before and during the newscasts. The microwave tech channel is good before broadcast as the technicians are ligning up and prepping all the live shots. Then it is interesting to switch over to the above mentioned frequency and listen to the cues from the director. Earlier in the afternoon as the crews and reporters are scurrying around for their stories and information it would be interesting to be listening to Shadow Traffic or other traffic or assignment desk freqs. As I mentioned before in an earlier post, Helicopters are also good listening sometimes. Especially in morning till dusk. It seems that unless something big is happening they hanger themselves early, when the sun fades.

Open your squelch all the way.... won't make any difference on a trunked system
anyway... you will see the numbers on the scanner moving more slowly and will
give the scanner a longer time to acquire the data channel.... if this doesn't work...
its probably your antenna... 800mhz is kinda fussy, especially in rainy weather.

labtech1@nospam.aol.com

## 3518. Powered satellite LNB as TX???

Met a guy today who claims to be able to make one of those "radar detector activators" by taking a K-band satellite TV LNB and a 6VDC power source (he uses four AAA alkalines in series) and placing the whole affair in a plastic project box with momentary switch. He has offered to make one for my nephew for $20. I noticed they fetch $50 to $100 in gimmick catalogs and on eBay...

Now I am wondering if this guy is full of bull-oney or could this be realistic? I am thinking of it both as gag gifts and potential profit selling it to pranksters. I have a source for LNBs (not sure what bands) for very cheap prices so it is considerable to me.

I think the word "loss" is what's confusing. This is not dissipative loss such as in a coax cable where power is turned into heat. Path loss is a measure of how much of the total transmitted power is recovered at the receive end. There are two components to free space path loss: distance and frequency. Each follows an inverse square law.

The effect of distance is easy to understand. The transmitted energy spreads out as it moves away from the transmitter site, and only a small portion of it is available at a particular location. Think of shining a flashlight on a wall. If you move the flashlight from 1 meter to 2 meters from the wall, the area illuminated will quadruple, but the intensity of the illumination will decrease by a factor of four. (The total energy is the same, but spread over a larger area).

The effect of frequency is a little more subtle. The "effective aperture" or capture area of an antenna is proportional to wavelength squared.

Consider a simple 1/2 wave wire dipole cut for 4 MHz. It will be about 120 feet long and the surface area of the wire will be perhaps 1 square foot. But the effective capture area of that dipole is about nearly 8,000 square feet! If your eyes operated at 4 MHz, you would see a black hole with an area of about 8,000 square feet. Any 4 MHz signal that enters that area will be picked up by the antenna.

A similar dipole cut for 400 MHz would be 1/100 the physical size, but would have only 1/10,000 the capture area. (The capture area would only be about 0.8 square foot.) So you can see that, although the 400 MHz dipole has the same gain as the 4 MHz dipole (each 0 dBd), it will capture much less signal at its resonant frequency.

Capture Area (dipole) = 0.13 X wavelength^2

This effect is not unique for a dipole. Some antennas will have more or less capture area than others. But any given antenna type will exhibit this same effect: Less capture at higher frequencies.

So path loss is not power being converted to heat. But it IS very real, and it is very dependent on frequency. And it does affect our ability to hear signals.

Obvious, just like gravity, the electrostatic force--but for slightly
different reasons.

> The effect of frequency is a little more subtle. The "effective aperture"
or
> capture area of an antenna is proportional to wavelength squared.

Less area, less capture. The "loss" from this is really just a failure to
even see the energy and it is still there being radiated into space. I
think essentially (given a "yes" or "no" choices), the answer to my above
question is "yes".

...
> So path loss is not power being converted to heat. But it IS very real,

and
> it is very dependent on frequency. And it does affect our ability to hear
> signals.

I agree, calling it loss is the confusion. As it represents energy not captured by the receive antenna and still radiating into space for someone else to potentially receive, it seems mis-named. This is what threw me.

Thanks for the response. You explained in more detail than needed - I work in mathematical modeling in radiation in a different part of the electromagnetic spectrum where we use loss in the stricter since.

OK. We can agree to disagree on the terminology. The term "path loss" is
commonly used in rf communications and I think it makes sense.

And hopefully others learned something from our discussion. I know I was
blown away when I first learned the implications of antenna capture area,
and that it was not the same as physical area. Getting a signal from the
transmitter to a distant receiver is what it's all about!

Can anyone tell me how much of a "preformance" difference there is between a radio shack OUTDOOR SCANNER/HAM DISCONE and the RADIO SHACK OUTDOOR VHF/HI UHF SCANNER antenna? I believe the VHF/ HI UHF has 0 db of gain, where as the DISCONE has gain. 90% of my listening frequencies are within the 46.460 area, 153 area, 453.00 area, with five 800 mhz trunk frequencies too. Unfortunately, the 800 mhz frequencies are the furthest I want to listen too! (15 miles away) ALSO... CAN ANYONE GIVE ME AN APPROXIMATE IDEA ON HOW FAR A DISCONE WILL PULL IN SIGNALS FROM...LIVING ON LONG ISLAND...RELATIVELY FLAT, SORROUNDED BY WATER...RURAL. JUST AN EDUCATED GUESS!!!

Are solderless...PL-259 connections useable on an outdoor connection...or are the soldered connections that much better?

THANK YOU!!!!!!

The discone has no gain with respect to a 1/4 wave vertical. But it does have wide frequency range. I think the "VHF-HI/UHF" antenna you mention is the one with a 19" whip and two smaller elements. Is that the one? If so, I don't think it will do very well at 46 MHz or 800 MHz. It will work about as well as the discone at 153 MHz.

The discone is a better overall choice, but I wouldn't expect miracles from it at 46 MHz. I think most of the Fire paging on 46.46 MHz is coming from Yaphank. How far are you from there?

> ALSO... CAN ANYONE GIVE ME AN APPROXIMATE IDEA ON HOW FAR A DISCONE WILL
PULL
> IN SIGNALS FROM...LIVING ON LONG ISLAND...RELATIVELY FLAT,

Impossible to answer this question. The receive antenna is only part of the equation. You have to know transmitter power, transmit antenna type and height, and terrain. Even Long Island has some hills. Hearing a transmission from a tower mounted antenna at a fire house is a lot easier than hearing a transmission from a fire truck.

> Are solderless...PL-259 connections useable on an outdoor connection...or
are
> the soldered connections that much better?

I like the solder types, but you have to do a good soldering job on the braid. Definitely get silver plated connectors. It's next to impossible to solder to the cheap "shiny" connectors Radio Shack sells. And get some Duct Seal at Home Depot (Elec Dept) to weatherproof the connectors.

# 3526. Regency MX-7000 on Yahoo Auctions.....

Newsgroup: rec.radio.scanner
Date: 2001-12-09 17:55:42 UTC
From: Mikey A <elhippo@attbi.com>
Message-ID: <3C13A5A8.D781E0D3@attbi.com>
Source record: 55677

Gang ~~~

There are a lot of buy-sell experts here so I'm hoping for an answer.

I saw a Yahoo auction of a Regency MX-7000 scanner two months ago. The scanner is older so it had 800 MHz freqs open from the factory without mods.

This auction had started at $75 and the bid review showed a hundred bids and a closing selling price of $140.

Looked good to me, so I placed my own Regency MX-7000 in the same auction a week ago.

Well here it is with only two days remaining and just one bid for the original reserve price, which is lower than the earlier auction I had seen.

I just wondered why my auction has so much less activity - has some weird info about the MX-7000 been released in the past two months?

Maybe you experts can help.

Thanks!

Hi, Mikey:

eBay auctions can be a weird thing. I've seen what you describe happen
a lot.

You might want to either post or email me the url for your auction and
I'd be glad to take a look at it.

Pictures in listings seem to really help a lot.

73,

# 3529. Questions re KX-TG2000CB cordless Panasonic phone

Newsgroup: rec.radio.scanner
Date: 2001-12-09 19:30:30 UTC
From: Mike Delaney <delaney@delaney.on.ca>
Message-ID: <3C13BBD6.FC10868B@delaney.on.ca>
Source record: 55680

I am getting ready to return this 2-line phone system, as I am disappointed by its range. It seems only slightly better than the Siemens Gigaset 2420 I tried out, and neither is much better than our existing Uniden EX 965m 900 Mz, 3 years old.

I checked out Deja, and see there is quite a controversial history re these phones' range & privacy. Here are the questions:

1) Is the KX-TG2000CB a newer model than the KX-TG2000B I read about in previous messages, or does the extra C just signify a model sold here in Canada?

2) I assumed this was a Gigarange, but now that I check the box and manual, Gigarange is never mentioned. It dosen't even say digital, except as in "digital" answering machine and "digital speaker phone".
- Are there still Gigarange phones, and do they have greater range than this system?
- Does this sytsem still use 2.4 from base to handset, and 900 Mz analog from handset to base? I assumed it was newer and that it was 2.4 gig. DSS both ways, like the Siemens, but now I read in fine print it uses FHSS (frequency hopping spread specturm).
- Is it true that DSS is the only way to ensure privacy?
- What ensures privacy, the "digital", the "spread spectrum", or both together?
- what the heck is "digital speaker phone" and why should I care?

3) It appears to me that 2.4 gig. does not ensure greater range. Has anyone else found this to be so? Are there models from other companies that I should look at? In order of importance, the features I want are - 2 or more lines, good range (outside, 700 ft or more), certain privcy, caller ID, answering machine.

4) Can these Panasonic handsets be registered to 2 base stations as the ones for the Siemens 2420 can? That might be the way to go for increased range around my buildings. Speaking of the Siemens, is anyone using the 2 base set-up? Is it convenient to select the different bases from the handsets, or does it happen automatically?

Thanks for any help. I know these are a lot of questions, but there are not a lot of specs listed for these units, especially the Panasonic, and it seems the ads can't always be believed..

Thanks for any help.

The Pro-92/93 are very similiar and I owned a 92 until I returned it due to its bad reception. Make sure you FIRST program the fleet map(I used preset fleet map E1P1 from my Pro-90 manual). Then, program all trunked freqs in correct mode (i.e. 'MO' is for Motorola). DO NOT lockout the control channel. If you operate the bank in the closed mode, it then will only stop on user ID you haver put in the scan list.

I would chose the Discone, Especially if your interest is in the 46MHz area. I too have a discone (however its not Radioshack but from http://www.AntennaWarehouse.com). The antenna you would be most interested in is HF/VHF/UHF Super Discone. This is nearly the same antenna as RadioShack sells however the one from AntennaWarehouse only costs $40.00 (I believe RadioShack is around $60.00.

I have the AntannaWarehouse.com VHF/UHF Discone ($28.00) and it does an excellent job. For picking up 160 MHz comms, I can receive most comms from the Kennedy Space Center which is about 35 miles away. These comms come in excellent. I can pick up 42 MHz transmissions about 35 miles away as well (however the Super discone would do better than the Discone in this range). I have also received MilAir comms from nearly 200 miles away on this antenna (from aircraft at about 20,000').

Larry ~~~

THANKS for the offer. Here is some info:

It is "Yahoo" auctions, not E-Bay - MY current auction is at:

http://page.auctions.shopping.yahoo.com/auction/57978513

I did use a picture - it is currently at the top of the listings page,
too.

The PREVIOUS auction that done so much better was at:

http://page.auctions.shopping.yahoo.com/show/bid_hist?aID=56790750

I see that I have had a second bidder late today. Maybe it'll work out
after all.

Thanks for any help.

I was thinking of getting one of the Winradio versions, but am not sure what I would actually find above 950 Mhz. It appears weather faxes can be captured by the Winradio 1550 version (which goes up to 1.5 GHz).

The much more expensive Winradio versions (the 3000 series) go up to 2.6 GHz or 4.0 GHz.

What else has anyone heard/captured above 956 Mhz and more importantly, how easily can it be translated and heard if it is digital?

Cal

So you mean you effectively short out a portion of the bottom of the antenna
to the magnetic mount ? Resonating the antenna to the desired freq ?

>> If it works that is what matters. Good job. Im not sure what you mean by
>> inserting the foil into the "hole" ?? What hole ?
>
>where you would put the antenna that came with that magnet mount

A standard CONUS Ku band LNB does have a 10.75ghz oscillator in it that probably puts out several milliwatts. If that was properly coupled to an antenna it would certainly set off an X-band radar detector at a good distance. I should scrounge up a old LNB and give it a try.

## 3546. Space shuttle comm's online???

Hi,

I live in Portland OR area (Hillsboro) and I write a letter to Santa to buy me a radio scanner.
Because I don't know nothing about scanners I have a question:
Is BC895XLT any good? can I use it in my area?

TIA

The BC 895XLT is ok, I think you would be most happy with a BC780XLT though. This is the radio I have and its excellent. My father in law had a 895 and one he played with my 780 he traded his 895 in and got a 780XLT.

Just my advice...

Hi,
I have A Uniden BCT-7 that seem to have developed a problem. When the radio is scanning a and it locks onto a freq it will seem to cut in and out every couple of seconds. so you only hear a couple of seconds of what ever you are lisenting to at a time. but if you push the "HOLD" button it will stop doing this and recieve with no interruptions???? Other than this it works great.

any ideas??
if able to do please reply to
spj67@eudoramail.com

thank you

The first thing that comes to mind is that you have the "priority
channel" feature activated and it is hopping over to check the prioity
channel.

Actually, it's checking the mobile extender frequencies in the HP channels - the ones that activate the annoying red warning lamp and signal. You can lock out the mobile extender frequencies as a way to disable this "feature." I beleive they're generally the freqs in the 455-465mhz range.

# 3558. More about International Space Station comm.

Newsgroup: rec.radio.scanner
Date: 2001-12-11 00:14:25 UTC
From: "Jim E." <james787@globalserve.net>
Message-ID: <BdcR7.43313$Vh3.64941089@news.tor.primus.ca>
Source record: 55609

Hello again,

I was listening further to the live streaming audio between Mission Control Houston and Endeavour. There was interesting conversation between one of the astronauts and Houston with maintenance on the space stations solar arrays being one subject. Apparently one of the astronauts was securing latches on the starboard solar array and could not get enough leverage with a pair of visegrip pliers he was using to secure one of the latches on the solar array brace but with the other three braces secured there is not great concern. A spacewalk was done today starting at 11:53 am Central Time which lasted for 4 hours and 12 min. A breifing was given to the public about what maintenance was done today by Houston. I am listening to Houston at the moment and there will be a handover between Expedition Crew 3 and Expedition Crew 4 from the crew of the Endeavour and the International Space Station. You may not hear anything for a period of time when the space station is orbiting the earth on the far side. When there is comm. between the Mission Control Houston and the ISS you may hear an echo when Houston speaks to Endeavour or the I.S.S. This might be a delay between the transmission and the live stream on the internet server. When Endeavour calls to Houston they say "Houston, Endeavour on the big loop". Endeavour crew are going through steps for docking. They are still equalizing pressure between the station and shuttle. You will not hear transmissions all the time so sometimes you will have to be patient. This is interesting stuff.

To listen go to www.chron.com/content/interactive/space/vdo/
then click on Station Audio link. You will need Real Player on your computer to listen in.

Jim

Why not track the ISS/Shuttle and when you are in the visible footprint as shown on the computer give a listen to 121.750 MHZ (FM) air-to-air, 298.0 MHZ (AM) primary (orbiter to suit), 259.7 mhz secondary; 279.0 mhz (AM) suit to orbiter. Packet digipeater is on 145.800 mhz and easy to here on nearly every pass. Licensed hams talk up on 144.490 and shuttle/ISS talks down on 145.800 mhz. Mir used 143.625 mhz (FM) and I believe I have heard the ISS downlink on that frequency. Good luck, Pat

Hello, I need to sell the following ASAP

Uniden Bearcat 895XLT Trunk Tracker Base(Mobile) Station

Used to listen to 800Mhz trunking radio systems used by most
police forces in Southern Ontario, Canada and the US
Original Box + Mounting Bracket
http://www.uniden.com/product.cfm?product=BC895XLT
$400 Canadian (approx $250USD) or best offer

Uniden Bearcat 8900XLT Base(Mobile) Station

Frequency Coverage: 25-550MHz continous & 760-1300MHz continous
Modes: AM, NFM & WFM
Step Sizes 5Khz, 12.5Khz, 25KHz & 50KHz
Channels: 500
Channels can be assigned Alpha Numerical Tags
Scan Speed Upto 100 Channels/second
Search Speed 100 Channels/second - normal Mode
300 Channels/second - Turbo Mode (5Khz steps Only)
Audio Output Max 3W
Power Requirements 12 Volts DC, 500mA
Original Box + Mounting Bracket
$400 Canadian (approx $250USD) or best offer

Uniden Bearcat 760XLT

Optional CTCSS Module installed + has been mod for CELL
100 ch.with 900 Mhz. Also used mobile
$200 CDN (approx $130USD) or best offer

I need to sell these items asap so if you have a reasonable offer, please
let me know. All units in excellent and working condition.

E-Mail phyberoptix44@hotmail.com if you are interested

Two (2) Kenwood TK-805D 16 channel, Series 1, UHF 440-475 Mhz radios for sale. Both are in like-new condition, including new Kenwood microphones, power cables, and mounting brackets. These radios will transmit and receive with no problem from the 440 amateur band up to 475 Mhz. The radio will scan all 16 channels or a combo thereof set by the user. Compact little radios with huge robust commercial grade audio output.

$150.00 each, plus $10.00 each for shipping via USPS Priority Mail, insured. If one buyer takes both, I will pay the shipping.

NO C.O.D., No trades. I will accept PAYPAL, US Postal money order, or a personal check. Personal checks will delay shipping until they clear.

Photo available on request via e-mail. Check my eBay feedback under : OFFDAN

E-mail if interested...

Dan

Hello all,
Just wondering if there is a program that can be used to
decode the MDT the local PD and FD are using? Also
what kind of interface would one need, and computer.
Ever since the county went with the APCO-25 system,
the scanner is useless. But I overheard some guys talking
on the ham bands that a person could see what was
being sent to the PD cars computer with a simple program.
Any help here or maybe a website with the program and
information.
Thanks

TV antenna hardware usually does the job nicely. A wall mount bracket or what we call a J pole or barge mount works. A barge mount is a J shapes pole with a flat flange to bolt to the bargeboard. The antenna can bolt to the top of that. There's lot of ways to do it. Try a large hardware store for fittings.

You might want to try http://www.MilAirComms.com First look at the
FACSFAC frequencies for the west coast, that would be a start as the
patrol aircraft might be checking in with FACSFAC then "push to" another
frequency. You'll hear them then say what frequency they are switching to.

Ok after much work I have put together a simple tutorial of how to put your scanner broadcast on the net using the Shoutcast server all software downloads are available from the site below. For you seasoned broadcasters I have uploaded the old 1-8-0 dsp for Shoutcast you know the one that starts with a bitrate at 8kbs instead of 24kbs cause it was very difficult to find. Let me know what you think if I missed something important in the tutorial let me know I will add it. Hope this helps the new broadcasters in the group!

## 3573. 28.115 is the new Ch-19

Newsgroup: rec.radio.scanner
Date: 2001-12-11 18:04:59 UTC
From: Speaker to Animal Crackers <flashboinnng1@aol.com>
Message-ID: <fVrR7.3693$vK1.358764@newsread2.prod.itd.earthlink.net>
Source record: 55623

Listened all morning to a group of truckers
on 28.115 mHz (AM). Even had
one who's wife was on the "base rig" talking with
her OM mobile about how to make out the bills and novel ways
she thought of to make "Xmas money".

Is this is what you get when you mass-sell 10 meter
radios at/by Radio Shack and others? Wonder how many
were running Uniden 2510's, 2600's or HTX's.

Is 28.115 is the new Channel Ninteen ?.
Is the cow out of the barn door?
A while later a ham came up on the freq in AM
to try an *politely* inform them there were in violation
of FCC rules. They just laughed, Thought it was very funny.
One guy told the ham, who exercized much restraint and
gentlemanly composure in his speech
to: "f--- off 4-wheel hampster mobile!"
complete with an roger-beep and echo-effects microphone.

Nice eh?
Gives you the warm & fuzzies?

I'm curious what's the FCC will do?

How about 2 meters?
Is that the next band to be trashed by these
morons who buy ham gear at R.S. or WalMart
and operate without a licence ?

Turn volume down and open squelch. L/O every channel when it beeps. If
any of these are important then program it into a memory channel. That
will solve your problem.

This is nothing new. Ranger a Uniden both put out ten meter radios that were, by design, easily modified to cover 11 meters and below. A simple jumper and these frequencies are available and, on the Ranger at least, press a couple of buttons and the readout displays channels. Following on there lead, lots of radios of various different brands are now being sold with these capabilities. To keep them legal for sale, they are marketed and enabled for ten meters but are easily modified. A lot of them come standard with things like roger beeps. It is rare to find them sold by ham radio dealers but in the CB shops, they are the hot thing. This has been going on for years and the FCC basically ignores it. They tried to control the CBers once and they couldn't do it so they are hesitant to try again. If you would like to see a full range of these radios, go here: http://www.copper.com/ They list over twenty five different models and, for another $30.00 at the time of purchase, they will modify them for 11 meters. In some areas, 2 meters is just as bad. 2 meters has been adopted as the standard air to ground communications for hang gliders, many of whom are not licensed. Several years ago, the major ham radio manufacturers decided that they would no longer worry about selling there equipment to only ham equipment dealers. Consequently, a lot of truckers are now using the HF bands instead of CBs. Equipment is available at most truck stop CB shops. If you listen around the ham bands or close to it, it is not uncommon to hear truckers.

# 3586. F.S. Pro 2022 Base Scanner With Full Cell.At The Correct 30 Steps

Newsgroup: rec.radio.scanner
Date: 2001-12-11 23:09:31 UTC
From: wilfkelly@rogers.com
Message-ID: <1e9d473c.0112111509.1657005a@posting.google.com>
Source record: 55635

I have a Realistic Pro 2022 scanner
200 channel base or mobile
covers 30-54, 108-174, 380-512, 806-960 ( no gaps)
Cellular mod done to receive true cellular in 30khz steps
30ch/sec scan mod done
has a good blue display
has a 9v battery at the back to retain memory when unplugged
has an external speaker, 12vdc, and antenna jack
also a front headphones jack

Comes with telescopic antenna and copy of owners manual

This scanner is in excellent ciondition except for 3 small holes that
were on top cover .They have been filled with plastic,otherwise there
is not a scratch anywhere on the scanner.And works like new.$150.00
u.s. email me at wilfkelly@rogers.com if interested.Thanks

For sale or Trade: Uniden BC 2500 XLT, works excellent and has a brand new heavy duty battery pack and comes with 2 antennas. Its has a very fast scan rate. I would like to get an Icom R2, I need a smaller radio to take to work with me.
So if you have an Icom R2 or would just like to buy it outright, am asking $ 150.00
The only thing wrong with the radio is I don't have the owners manual for it, but one can pick them up from the uniden website.
email me at: freebird@fiberpipe.net

With all due respect, y'all have to understand how these radios are being used and by whom. It then becomes obvious that the on-air actions of amateurs aren't going to have any effect on their illegal operations.

You can run CW or RTTY all day long and it isn't going to bother these guys. In most cases, all participants in the conversation are within 1 mile of each other...and usually less. Judging from the dirty, overdriven audio typically heard, many are also running linear amplifiers. This further negates the efforts to override their transmissions.

These guys don't know where they're transmitting, and they don't care. Typically, they're using an "export" radio with a band switch ("A", "B", "C", "D", etc.) They travel in "convoy" and use the band switch to access a "private channel", which is the same channel designate as their "company channel."

For instance, let's assume the "company channel" is 27.125, or "regular" CB Channel 14. Access is obtained by putting the radio on Band "A", Channel 14. Their "private channel" would then be the same Channel 14, but on Band "D" or "E." The channel typically stays the same. The driver simply changes the "band" knob to switch from the "company" channel to the "private" channel. This is why 28.085 is such a popular bootleg frequency. On most export radios, 28.085 is Channel 19 on one of the upper "bands." Capiche?

I'm not advocating illegal encroachment on 10 meters. Just wanted to explain how it happens, for those who might not be familiar with the nature of the offenders and equipment commonly used.

Does anyone know if there are any other cities in Canada, other than Surrey B.C., Scarborough ON, and Timmins ON broadcasting there scanners online.

I am trying to find some more out there if that is possible. I already have lots of American stations.

Champ

A homebrew ant. is really easy.
Cut 5 pieces of 1/4in.stanless steel rod
to around 4 inches a 1/4 or 1/2 in ok.
This is not that critical as you
can adjust it bycutting off small pieces.
Take a SO259 chassis mount solder 4 pieces of
rod in the mounting holes.
The 5th piece of rod solder in the inside center hole.
Silver solder is the best. You will be able to
connect coax to the SO259 with a PL259.
You can weather proof this anyway you want. PVC pipe
makes a nice finish job. 1 1/2 to 2 in. pvc.
This is a great ground wave ant for 800 to
900 MHZ.With very good gain.

## 3598. R-10 scanner software

Newsgroup: rec.radio.scanner

I just purchased an Icom R10 and also got the computer interface software. The first time I try to install it, the thing keeps telling me I have a device incorrectly installed. Then the guy who wrote the software (you can call him for help) said, yeah, there are some problems with some of the diskettes. So he emails me another.

This time it installs just fine. When I successfully hook up the R10 and download, it hits 100% of the d/l and freezes. I reboot and then just open up the help file separately, not the full program. It freezes too.

The guy claims not to know what is happening, and perhaps that's true. Just wondering if anyone else out there has had problems with this software.

Thanks

av

Yupiteru MVT7100 continuous coverage handheld scanner. I believe this model is still in production and has received outstanding reviews since it's inception.

With the exception of needing a memory backup battery, the unit is in excellent working and very good physical condition showing only the typical wear on one or two buttons and around the top controls.

I will answer any and all questions to the best of my abilty. For more technical information please see;
http://bander.com/usa/scanner/yupi_mvt7100.html

Includes; Original packaging, AC adapter, telescoping antenna and 3rd party English manual.

Terms are PayPal payment only. Buyer pays for shipping & handling of their choice. Best offer by close of business (5pm EST) on December 19th takes it.

I'm offering this unit in good faith and expect the same courtesy. It's really very simple, if you make an offer then I expect you to honor your commitment.

Thanx,
Bob James
Rochester, NY

Hmmm, sounds like a unity gain quarter wave ground plane to me.....
Which beats a random piece of wire all to hell, but not a "hi gain"
antenna.... Make the radiator 5/8 wave and you will see some gain over the
1/4 wave (leave the radials 1/4 wave). Plain ole #10 copper wire does a
fine job, also - easy to work with and at these short lengths it doesn't
have the strength of steel..... Next consideration is your coax, a 6db gain
at the antenna doesn't mean much if you lose it in the pipeline (although
presumed increase in elevation may make up for it)......
Cheers n beers y'all.

Heavy copper wire works just as well, and is a heck of a lot easier to solder. Soldering to stainless steel is just about impossible for the average person.

3 to 3.5 inches is a better length for 850-870MHz reception. 1/4 wavelength at 850MHz is 3.5 inches.

Walt

This is a good antenna. I used one cut for 147 MHz for several years. I used 10 gauge solid electrical wire. Run the coax up through a piece of TV mast and the antenna will set nicely at the end of the mast on the four ground plane radials.

quarter wave elements are the smallest that will work but keep in mind that you can use any odd multiple of a quarter wave:

so if 4 inches are a quarter wave then 12 inches (3/4 wave) should work with a little more gain.

20 inch elements (5/4 wave) should work too.

if you don't want to scrounge around for the parts, Radio Shack sells an antenna for $19 very similar to this. It even has a mast clamp.

The Catalog number is 20-176.

Here is a web page with photo:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D176

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

I have a complaint about almost all RS salespeople in my area (Hampton, VA). That is all they are - salespeople, not electronics folk. And poor ones, too - don't know the product, don't even know the product is in the store, selling something 'new' in a box that is missing an antenna and has two of four batteries in it. And always trying to get you to buy something else, no matter that you came in for a $2 earpiece, they ask if you need a metal detector or computer or some other $300+ piece of gear - I prefer to spend my money, I don't want them trying to spend it for me, ya know?

# 3613. Siemens Gigaset 2420, 2nd base (2402) for more range?

Newsgroup: rec.radio.scanner
Date: 2001-12-13 02:58:55 UTC
From: busserman2001@yahoo.com
Message-ID: <3db73a8c.0112121858.fe65acd@posting.google.com>
Source record: 55564
Cross-posted to: comp.dcom.telecom.tech,comp.home.automation,rec.radio.scanner,misc.consumers.house

I have tried a Gigaset 2420 and know it does not have enough range outside of the house for my needs, but I am considering locating a 2402 base in an adjacent office about 200 feet away (extension phone lines already exist). I read in the manual that handsets can be registered to 2 or more bases, and that range can be extended this way.

I would like to hear from anyone who has tried this, or has an opinion on this set-up. Do the handsets auto-select the base with the strongest signal, or do I have to select one base or the other? I remember that the menu system on the Gigaset wasn't too user-friendly, and imagine it could be a hassle to switch bases. Also, do the bases interfere with each other?

I liked the 2420 when I tried it, except for the range. I now have a Panasonic KX-TG2000CB, which I am returning because it doesn't have much better range. I would go back to the Siemens with two bases if that improved the range, and was easy to use.

Thanks for any info.

My web page includes scanner info for Vancouver BC, Vancouver Island, Sunshine Coast and area. Feel free to send new info, I will be adding much more. check it out at http://members.home.net/dr.rob/mainframe.htm

# 3620. FS: Icom R75 w/DSP + Filters

Newsgroup: rec.radio.scanner
Date: 2001-12-13 05:12:31 UTC
From: rmonfeli@firetowire.com
Message-ID: <3c1838ab.52354629@news.firetowire.com>
Source record: 55571

Excellent condition! Have everything as new, box, manuals etc. It
comes with the following: UT-106 DSP Unit; UT-102 Voice
Synthesizer Unit; CR-282 High-Stability Crystal Unit, plus the
following filters: FL-223 1.9kHz for SSB and FL-52A 500Hz for CW/RTTY.
This unit is Loaded! During the holidays Icom is selling this popular
model with DSP for just under $600; the above has over $400 of added
features for a little more. I guarantee this unit to be as described.
Asking $700.00 obo, including shipping in US.

## 3621. File transfer software for PRO-93 and PRO-2053

Newsgroup: rec.radio.scanner
Date: 2001-12-13 05:43:27 UTC
From: 93SW <no@spam.net>
Message-ID: <3eXR7.11391$Pk6.4440522@typhoon.southeast.rr.com>
Source record: 55570

An unsupported freeware file transfer utility for the PRO-93 and PRO-2053 scanners has been posted in the Files section of the PRO-93 Yahoo Groups site. It works with the PRO-92 cable or any of the home made cables that work with the PRO-92. It will allow you to create a file and send it to the scanner. It will not read the scanner. Use it at your own risk.
The link below will take you to the file. You may need to join the Yahoo groups first if you are not already a member.

Again, this is "as-is", unsupported freeware. Use at your own risk and use with caution.

Enjoy!

I am selling my Icom R-10. It's 2 months new with ALL accessories. I just can't afford it, frankly I bit off more than I can chew when I bought it. Will make any one a decent deal.

What can you say when you pay the help at minimum wage and/or on a
commission bases? You get a work force of minimum knowledge and skill.
That is what the bargain shopping public demands, everytime they part with a
dollar to pay for the cheapest priced item/service. This doesn't *just*
happen at RS but all over, in every business/goverment agency and so forth.
If RS service is so bad and disturbing to the shopper, then they should stop
shopping/purchasing (voting with the wallet) there and take their business
somewhere else. Problem is, there is no place else. This tells you there
is just a small market nitch in the everyday electronic home gadget builder
catagory. Selling the nickel/dime items will not pay the bills, so the
bigger ticket items must be pushed if there is a hope of staying in business
for tomorrow. So, get use to it.

Source record: 55579

This is a common mode of communication for news agencies. This is pretty much used for cueing crews in the field using the "Live Eye" trucks on live shots.
It's probably refered to as City Wide "PL".
Most stations now do this over a phone line now. One phone for Directors PL, which is what you are hearing and the other is IFB (interruptable fold back) which the reporter hears in that earpiece they have in the ear, whcih gives them in thier ear everything you hear minus themselves. This way the reporter does not hear themeselves delayed thereby making them stumble because it's about 1 second or more behind when on the phone line. It's called mix minus and is usually what reporters are net getting when you see them pull thier earpiece out when they are talking. That is interrupted locally and from the station to give reporters cues. The directors PL if used usually is for camera direction and does not overload the reporter with useless information.

With digital cell service now you have to feed mix minus even on a "Live Eye" microwave shot due to the audio delay of the return audio. Mix minus is always used on satellite live shots and is really why mix minus was implemented.

In most markets it has been reduced to feeding both the reporter and photographer IFB so they both get the same cues. Since most TV news outlets have moved to Nextel the radio systems have become a thing of the past, which is really a shame.

Hope this helps.

Ed

Yep.

> Make the radiator 5/8 wave and you will see some gain over the
> 1/4 wave (leave the radials 1/4 wave).

Not quite that easy. When you make the radiator 5/8 wave, you have to
impedance match it to the 50-ohm coax.

>
> 20 inch elements (5/4 wave) should work too.
>

Not exactly. Yes, odd multiples of 1/4 wavelength will be resonant and
will present a pretty good match to 50-ohm coax. But it will not give
you gain on the horizon (which is what you want). You will get
multiple lobes tilted above and below the horizon.

The maximum length for a vertical element (before the pattern breaks
up into multiple lobes) is 5/8 wavelength. This will give you maximum
gain on the horizon. But you have to impedance match that to your
coax.

You can design a collinear array of properly phased 5/8 wavelength
elements to give geater gain. But each element must be no longer than
5/8 wave.

I use WinScan780, it isn't free, but it pretty good. I don't use any of the moniting features, but I do use it to program my BC780, which it is great. There are a few features missing that I would like, like:

- Swapping banks
- ability to disable monitor, it really slows down the software.

I have never use TrunkStar780. But if you are looking for free software you can try Andy's program. I am not a big fan, but I do use it to swap banks, whick WinScan780 doesn't do.

Well I will say sorry about the course language, but there is a bigger picture on this.

I have studied and recieved a lowly tech lic for starters. However having driven semi's for years I can *try* to relate the truckers side. CB 19 has degenerated way down to the point of people harrassing truckers (listen sometime a bulk of the noise is from base stations especial around big cities) most of the "sesame Street" gang is kids playing and talking big.

Due to this depressing talk to drivers, many have left the CB buying ham radios for the extra cost so they can "get away" from the base stations (I was told that a long time ago CB was just like 80 meters is today...many truckers miss that peaceful feeling you enjoy (I only have a tech so 2 meters is my place)) while it is wrong many don't care due to the way they were treated on channel 19 (Penn state has a kid on 19 with a 250 watt base that must have a dictionary of every swear word that he just keeps reading at truckers)

As far as the FCC many state scales have fcc trained weigh masters that do check (you pull on to the scale and are asked to key up the CB) sometimes they find them often they don't. I belive that the truckers could bring a revival to the ham comunity, just from the numbers point of view, and I started down ham meeting another ham trucker...HE HAD A HUGE ANT (screw driver)ON THAT TRUCK!!! made me wonder what he was talking to!

While it is a privalage to us ... a little tact here could gain you a friend and the ham community more clout. Sence I got my ticket many of the guys I used to run with have seen me use the 2 meter repeater system (they loved the michigan linked repeater system...all over the state with only an HT) and the phone patches, many have started borrowing my books to study for the test.

To start them on the road just help them out ... many would love to have the ANT checked by an MFJ analizer (they pay up to $20 for it) and as you teach them how to get the best out of the CB talk about the ham structure many will listen and think about it....many of my friends have started studying

(by the way it supposed to be 28.665 for the new 19)

Martin,
I like my PCR-1000. The ICOM software is poor.
Their are a couple of good packages on the net not to mention the
Hacker guide to the radio that explains the commands so you can write you
own applications which was suprisingly easy with Visual Basic.

Oh, never would have thought of that (*sheesh*). I think RS always paid
their people the same relative wage/commission; my question is why the
preponderence of witless trolls working there these days? Know nothing,
lazy, friend on the phone talking to, and gabbing with non-customers outside
the store, it goes on and on. ("Oh, you found it", the employee said to me.
I didn't know we had any...)

Enjoy - you don't really have a choice.

Is this a fancy-schmancy key combination that will clear out the contents of all programmed memory slots in a BC9000XLT? I had a similar key combination for one of the smaller Uniden scanners, although sadly I have lost that info.

Thanks

The AOR software is free but there are several third party packages
support the AR8200. The ARC8200 software for memory management is well
thought of by users. Demo versions are available so you can try them
out to see which suits your own needs/likes/dislikes etc.

>headphone jack. Am I right?

No. You need a suitable TTL interface connected to the remote socket on
the side.

There are some sets such as the IC-R2 and DJ-X3 that make use of a
stereo earphone socket to carry basic TX/RX on one "channel" but not the
AR8200.

Pressing 2,9 + Manual when turning on will clear all memory channels.

Holding down the 2, 9 & DLY keys as you turn on you enter a Test Mode.

Hit any key or turn the VFO dial and the alpha display will tell
you what key you have pressed or which direction you are turning the
VFO dial

In addition, whilst in this "Mode"

Pressing Lock+C
Replaces all memories with 1300MHz and alpha-tags channels 1-250
with CH 00-249 in the display. This will clear your memory data.

Pressing Lock+D
Displays Checksum and Firmware Version Number

Pressing Lock+E
LCD Display Test

Pressing Lock+Prog
Runs a short, repeating Demo Program

Ummmm, what part do you not understand? The lower paying jobs attracts the lower brain functioning people . The higher educated/skilled/motivated people work someplace else. You know, the ones that couldn't/wouldn't go to school or if they did, put in the minimum amount of effort. Ya know, the ones that figured out how to scam (welfare?) the system and squeak by with the minimum amount of effort. Of course there are the educated idiot people in life as well. RS employment, like allot of other places is just an extension of this. Hard finding good help at any price and even harder to get rid of the poor help after you got them. Sounds like you have your share. The RS stores in my area are not as bad as yours. They are not techie types, but at least they will get you to the section of the store where the parts you request are possibly located. Then they will take your money and make correct change.

I own both Icom IC-PCR1000 and WinRadio WR-1550e. I prefer to use the
WinRadio because of excellent performance and user friendly software
which (unlike with the Icom) is being periodically updated.

There are also free plugins available for various add-on functions and
even a simple programming language called Radio Basic you can use to
make your own applications. Also Linux and Mac support (if you must).

Check out this:

http://www.winradio.com/home/1550e.htm

Hello newsgroup,
Can anyone tell me if the radio shack pro 2053 is a good radio to buy
for trunk tracking.How is the sensitivity in picking up in the 800
mhz band for trunking?Does this radio have better specs then the
hand held pro93.I no its the same radio but sometimes the base radios
seem alot better for selectivity and sensitivity.
Please reply back to the group
Thank You

Mint with all original accessories, including manual... I'd roughly guess about $150 tops. They can be purchased new for about $200, so I wouldn't pay much more for a used one than that....

You won't hear many people recommend that one - I've got it, I don't recommend it.
Trunkstar seems to have a better reputation, and if I had it to do over, I'd have gone that route.
And Winscan/Pozilla support is truly non-existent; there's no debate on that point even by people who can get the software to work.

Thanks PAT!

I have downloaded both the ICOM software, and the TALKPCR software and
the Winradio software, but it's hard to compare when I don't have the
radios.
Specially the performance part.
From what I can figure out, the Winradio software is very intuitive,
both PCR software I have a hardtime with.
The XRS options for Winradio seems exellent.

Source record: 55511

Yes it can here you go for the PRO-2021 all I did was a search on the net and found:

19-07-1998
PRO-2021 Cellular restoring

Overview:
The pro2021 is a 200 channel scanner, mode is implied by frequency, missing the 220 ham band, 800+ cell fone/ISM band, the 170ish thru 380ish military? air band... sold for about $200 from radio shack, first on special in 1986 time frame.

Bands which the cpu will honor may be excluded by the presence of diodes near C151 (on silkscreen) top view, left end, rear. in order from left starting with D44:

D44 - 'U2' - 810-960 MHz Mode: FM Step: 12.5 kHz (installed - cell fone)
D?? - 'U1' - 380-512 MHz Mode: FM Step: 12.5 kHz
D?? - 'Hi' - 138-174 MHz Mode: FM Step: 5.0 kHz
D?? - 'Ar' - 108-136 MHz Mode: AM Step: 25.0 kHz
D45 - 'Mi' - 68- 88 MHz Mode: FM Step: 5.0 kHz (installed - TV ch2-4)
D?? - 'Lo' - 30- 54 MHz Mode: FM Step: 5.0 kHz

further:
when the cpu selects a frequency, IC8 (a shift register) is used to enable the rf front end for that band. IC8 is near center, about 1.5 inches from front, thru-hole mounted on top. the outputs of ic8 associated with D44 and D45 are not connected to anything. R112 leads from pin 4 of ic8 to base of q10, and when the output at pin 4 is active (low) enables VHF LO band reception. Pin 5 of ic8 is active for "Mi" or "VHF-Mid" band recption. another (10K) resistor may be connected from pin 5 to the rf-enable end of r112. this will enable the lo/rf for 68-88. this mod is incomplete, and any "scanner men" are invited to enter this discussion.

pin 13 is associated with the 810-960 MHz band, and similar modification of adding a 10K resistor from pin 13 to the rf end of r113 should enable that rf front end.

note:
search mode does not function with either of these mods, so i'm probably missing something, but direct (manual) frequency entry of the 2nd harmonic of the 440 MHz ham band coupled with the use of a 440 HT who's 2nd harmonic is about 50 - 100 dB below carrier result in a full

quieting signal at 5 watts at a distance of about 2 feet.

so:
have we stimulated anyone who knows stuff about modifying scanners to
join in and help us 2021 owners out? if so, that would be great.

btw:
cycle the power after clipping diodes, the cpu seems to sample the
diode array at power up only. reset is not necessary.

# 3668. Motorola cellphone test mode channel scanning question

Newsgroup: rec.radio.scanner
Date: 2001-12-14 20:14:16 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10112141313450.23286-100000@srv1.calcna.ab.ca>
Source record: 55519

** Note: I live in Canada, where it is legal to listen in on cell phone calls. **

I have the use of a Motorola MicroTac flip phone which, luckily, can be placed in test mode by means of a certain 14-key sequence, instead of by means of the infamous shorting-out of battery pins procedure. I have been able to enter and execute some simple test mode commands, such as "turn on high tone," "display signal strength," etc.

I have also used the test mode commands to enable transmission and reception, and to select a given cell phone channel. So far, I have been unable to hear anything. I am thinking that part of the problem might be that this phone is an old 800 MHz phone which uses a band which is rarely used any more, even though I live in an urban area soaked with radio transmissions.

There are so many channels, though, and apart from getting a "real" cell unblocked base or mobile scanner, I was wondering whether:

1) The cell phone I am using to do all this must be activated (i.e. registered as belonging to a paying customer of a cellular service provider) before I can listen in on other people's cell calls?

2) Can I auto scan with this cell phone, almost as if the cell phone were a "real" scanner--that is, the cell phone looks for voice transmissions for me and locks onto them? If so, then how can I do this?

3) If not, can I "scroll up" or down through channels, just like using up/down arrow keys on a TV remote to look through channels?

The web sites I have seen on this subject do not seem to answer these questions.

Thanks in advance.

Ian D.

# 3669. 245XLT Antenna Question

Newsgroup: rec.radio.scanner
Date: 2001-12-14 20:19:33 UTC
From: mike@mpnelson.com
Message-ID: <64591ddd.0112141219.648f54b8@posting.google.com>

I'm getting a 245XLT for Christmas to replace my old PRO-39. I mostly scan for local Police/Fire. I use the scanner as a remote device as well as a quasi-base unit. Given the way I use the scanner, I have two antenna questions:
1) Is there a "better" antenna for remote scanning than the one that the 245 ships with?
2) How can I best select a base antenna to mount on my house to support my "base" scanning?
Thanks.
Mike Nelson

Dave, try Ramsey electronics at:

http://ramseyelectronics.com/

They make low power FM (89-108mhz) transmitters. You could
feed the audio to the transmitter then use any walkman type
device to hear the action.

Good luck!

Any good software for the Icom R2?

I just bought one on sale and it comes with some software and cable
from Icom and I'm sure a 3rd party makes it, but I don't recall the
mfg. name right now.

Got to mail the coupon and recipt in to get the software.....so
are there other software pkgs out there any good or is this the one
source for the r2?

Thanks

The radio schack amplified speaker for the car that I bought was about $25.00. The only thing that I didn't like about it was that it had no bass to it. I hade ridden with an officer a couple of times and there was a great difference with the motorola speaker. It was lound and had bass to it. It looks a little more sturdy to. Not so plastic feeling like the radio shack model.

Jason

Hello and Happy Holidays to you Brad, and those on this list;
I'm a new guy on board, and I thought I'd make a recomendation for a great sounding speaker for scanner use. It's the Motorola model hsn-4009a which was standard with their Micor 2-way radio. Looks good, sounds good. Tons of them floating around most radio hamfests. But you will need to install the appropriate flavor of plug for your particular scanner as the type Motorola used fits their radios only.
Also, anybody out there have the mods info for getting rid of the stupid beep on realistic scanners, specific-pro-2021?

Cal,

There is a frequency range 1240 - 1300 MHz that is an amateur (ham) band, there are also many cordless phones up in that range as well as many wireless network cards, a lot of data, etc. Unless you can tap the data and decode it or unless you want to listen to hams, it might not be that fun. Maybe in the future there will be more exciting stuff there. Good luck.

Also, Best Buy sells a "Sound Sender" for $19.95. Designed to play your CD player in the car, but would work in the house, too. I have one hooked up to the TV cable box, and I can listen to the cable music channels anywhere in the house. Unlike some others I've tried, this one has excellent fidelity.

All I can say is stay away from RatShack ones (passive as well as the amplified model) unless your driving is done solely on smooth, new roads. I have had several of them and ALL have been "bumped to death" just from the vehicles' normal travel over bumps and rough surfaces. I got one for about $3.00 a month ago from MCM Electronics and I am pleased with it (passive but rated at 5W so it does the job).

# 3680. FS: Sony ICF-Pro80 Portable SW/SSB Radio

Newsgroup: rec.radio.scanner
Date: 2001-12-15 01:02:49 UTC
From: "S. Poston" <sposton@nosp.aol.com>
Message-ID: <9ve7l2$957$1@nntp9.atl.mindspring.net>
Source record: 55530

Sony ICF-Pro80 for sale on Ebay:

<http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1309246380&r=0&t=0&showTutorial=0&ed=1008558980&indexURL=0&rd=1>

This amazing portable radio has a PLL synthesized receiver and can receive all frequencies from 150 Hertz to 108 Megahertz -- and with the use of the included Sony frequency converter, it also covers the range from 108 MHz to 216 MHz! This includes the deep AM band, shortwave, narrow FM, the VHF TV bands, FM radio, police/fire/air, and much more.

The radio has 40 memory presets, 3 scanning modes, squelch control, and fine tuning (for AM and SSB only). Tuning modes include direct input, manual, scan, limited scan, memory scan, program memory scan, and priority tuning. No band selection is required--frequencies are tuned consecutively throughout the reception range. The unit automatically detects the mode, but the user can override and choose among FM, Narrow FM, AM Wide, AM Narrow, and SSB.

The keys can be locked to prevent accidental activation. A button on the side turns on the display light. It uses a TNC antenna connector on the top of the set, so an external antenna can easily be hooked up. The built-in speaker has a 400 mW output, and there are separate jacks for headphones and line out. Runs on 6V DC either through 4 AA batteries or external power. (The frequency converter requires it's own 2 AA batteries). The case measures 3.67" wide x 2" deep x 7.25" tall and it weighs about 1 lb. 7 oz.

The package includes a protective cover, a shoulder strap, the frequency converter and a portable antenna. The 105-page instruction manual is included, along with a Sony "Wave Handbook" guide to international stations and the 1990 World Radio TV Handbook.

Remove nosp for reply.

>PRO-2021 Cellular restoring

This is a long-running urban myth. The 2021 CANNOT be "restored" for cellular,
since the radio contains no 800Mhz circuitry to "restore."

While it's true you can modify the radio to DISPLAY 800Mhz frequencies, no such
frequencies will actually be received...since the radio's front end does not
have 800Mhz capability.

The similar-looking PRO-2022 *does* have 800Mhz capability and can be modified
for full coverage. The PRO-2021 is not capable of *any* 800Mhz coverage,
regardless of how it is modified.

You are absolutely correct. Anything in a car or truck can take a
beating.....get's knocked over, falls down, drop a hot cigarette ash on it,
etc....

A Radio Shack ( RatShack) extension speaker should work just fine...

I have been a ham for 10 years now and a CBer for over 20 years and I have noticed a degradation of CB to the point that no one uses it anymore. If you are on the road ham is the best way to go. With the new IRLP system you can tone up repeaters almost any ware in the world, ( http://www.irlp.net/ ) with just a hand-held. One thing that all CBers should ask themselves before they key up, is what they are talking about fit for family listening. Would you want your wife, girlfriend or kids listening to that? Also that they can be tracked in under 6 seconds and the transmitter fingerprint system works very well. The reason that the governments of the world permit this to continue is that the cost to go to trial is prohibitive. I do know that Industry Canada and the FCC will act on complaints especially if the dirty radio gets into the commercial or police bands. I have played around with radio tracking using the Doppler shift radio tracking system on CB and it is unbelievable how fast you can drive right up to someone's door or follow a dirty trucker into a truck stop and have a talk with him face to face.

I have the external speaker jack of my scanner fed directly to my stereo receiver. By doing so, I can listen to my scanner (through the stereo) in any room that I have stereo speakers in.

I can control the volume either through the scanner or stereo volume controls.

In my vehicle, I do the same thing by using a cassette tape adapter to feed the scanner through my car stereo.

Very stupid to buy software from somebody that does not offer a demo at his site..
For programming ARC780 is the best ( only $25). For controlling TS780 seems to be the best but ARC780 will get control option according to butel.nl site. And don't forget TS780 is 3 times the price of ARC780..

Perhaps I am tooo old: I cannot operate my new MVT-7100
Who would load my 10 channels
with about 10 or 20 frequencies each channel ? I would pay him/her
two minimum wages. I furnish the frequencies of course. The Owners
Manual is too complicated
for an old man. Thank you !

# 3698. Does this product exist? If not, why not?

Newsgroup: rec.radio.scanner
Date: 2001-12-15 18:48:38 UTC
From: mike@mpnelson.com
Message-ID: <64591ddd.0112151048.4163dd21@posting.google.com>
Source record: 55448
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Here's what I'm looking for; an integrated scanner and GPS unit, either as a standalone product or as one integrated with a car radio/CD player. The standalone unit would be powered from a cigarette lighter and would play sound through a localized FM transmitter or a cassette playback unit (like you can connect to a portable CD player to play music through your car's cassette system). Of course, the integrated unit would replace my existing radio/CD player.

The unit would have a PC interface that would allow me to connect to a site and download specific frequencies for a geography and allow me to select frequency "family" like police, fire, aviation, etc. The user interface of the unit would allow me to select one or more family of frequencies. The GPS receiver would figure out where I am on earth and use the appropriate set of frequencies for the family I've selected.

So, for example, I could be driving in downtown San Francisco and be listening to the SFPD and SFFD, automatically. As I drive down Interstate 101 south, the GPS would figure out that I'm on a freeway and load in the CHP frequencies for the region I'm in. It would also switch my police and fire frequency set to match the city I'm in, or, as I approach SFO International, it might load in certain aviation frequencies.

I realize that moving fast through an area might make listening in on action a bit problematic as you'd surely miss lots of transmissions during the short time you're in the area. But, wouldn't it be fun to have my local suburb's police/fire on my car radio and then, when I go visit another city for any period of time, be able to check out what's going on there.

I'd pay pretty good money for such a product if it existed, but I' have not been able to find one. I suppose it wouldn't be too hard to build a prototype from off-the-shelf parts (laptop, Garmin GPS, BC245XLT scanner and some programming to run the whole thing). This might provide the proof of concept that would convince Uniden and Garmin to team up on such a product. Would anyone else buy one besides me?

Try holding the "E" button until the radio disconnects,
you'll get an alert from the software which can be clicked away and it runs at full speed.
Or, don't even connect to the radio and instead open an existing database and work within it.

>
> I have never use TrunkStar780.

I've looked at TrunkStar,
but can't evaluate it until I get My 780 back from the black hole that Uniden America launched it into via FedEx.
I suspect the driver recognized it for what it was,
wanted a nice x-mas treat,
and decided to let the insurer "tote the load", so to speak.
I have no proof of any of this and thus it's only speculation,
but the stories sure do conflict among the various parties.

i remember in the old days every once in a while, somebody would get
one of those radio direction finder gizmos and try and find somebody
for whatever reason. i always thought that people who do stuff like
that , have entirely too much time on their hands.....

No it's not. Any transmitter, regardless of mode, can be fingerprinted. We did it in the military.

Tom

I had to laugh at this. This is almost like the Yogi Berra response as to
why he didn't go to a certain popular restaurant. He said, "Because it's so
crowded, no one ever goes there anymore!"

I use a set of old computer speakers on my base unit at home! seems like people go thru, and update computers so often...finding a discarded set is no problem! They have an independant power supply ( transformer ) and they have volume as well as bass and treble adjustments. Works great for me!

Well Out I see your problem MDT's don't work very well on a trunked network. They need a constant channel not one that hops around. Maybe thats what you need to look for. Also have you got the disc connector properly setup??. It sounds to me you want to monitor talk groups and not what Police see on thier computer screens in thier cars. Just a thought here.

Hello newsgroup,
Does anyone no of a web site or where i could get a copy of the
frequencies allocated for both United States and Canada.I saw a chart
many years ago that showed the frequencies from the low end around
25 hz and above frequencies right up into to the mirco wave.If
possible,i would like it in a color chart so that i can print it out.
Please post back to this group.
Thank You

# 3722. Re: Motorola cellphone test mode channel scanning question

Newsgroup: rec.radio.scanner

From: "Dr. No" <no@hello.goodbye>
Message-ID: <aj2T7.150363$AR6.3662378@e3500-atl1.usenetserver.com>
Source record: 55471

After the crazy U.S. cell-phone-listening legislation, Motorola started changing the test-mode so that you could only listen to the
control channels. Try channel 333 or 334 and see if you hear a digital signal. If that works, you have the "updated" version, which
means you're out of luck. Also search for "Motorola Bible" online, and that will give all the commands.

I don't think so. It is a very good scanner and user friendly. Nothing like an Icom. I would concentrate on learning general scanning with it before trying to tackle trunking. The 895xlt is a a good scanner to start with.

Actually, all transmitters can be fingerprinted. It originally did work only for FM. Even the public tech is now good enough to uniquely identify individual transmitters. Mil tech is more than good enough to do it automatically.

No schematic needed. All you use is a transformer rated for adequate
current and 120 in to 10 out.

For Sale: Pro-2006 Scanner (cell and speed mod done)

This scanner is in PRISTINE condition. There are no scratches, nicks, or the like on the face. I even have the original Styrofoam inserts for the box! I have used this scanner for less than 50 hours total. It was refurbished by Radio Shack in 1995. I am the original owner. I'm not a dealer; I didn't find this at an estate sale or a Good Will store. It's been stored in my air-conditioned house for the last six years.

For Pictures see: http://btlex.com/pro2006.html

I created the web page for E-Bay, but I never ran the ad (that's why there's no price) - Price is **$250 plus UPS insured shipping** - Postal money orders or personal check (ships after it clears.)

For Sale: Pro-62 Hand Held Scanner

Covers 30-54, 118-174, 380-512, 806-823, 849-869, 894-960MHz

This scanner is in PRISTINE condition. There are no scratches, nicks, or the like on the face. I have used this scanner for less than 25 hours total. I'm not a dealer; I didn't find on a table at Value City, I purchased it new in 1996. It's been stored in my air-conditioned house for the last five years. I have the original box and even the original packing material.

For Pictures/Details See: http://btlex.com/pro62.html

I created the web page for E-Bay, but I haven't run the add yet.

Price is **$150 plus UPS insured shipping**. Postal money orders or personal checks (ship after it clears.)

## 3739. multi-trunk?

Newsgroup: rec.radio.scanner
Date: 2001-12-16 22:05:56 UTC
From: Dave <me@4campbell.net>
Message-ID: <8V8T7.5205$gw3.2639109@news1.rdc1.md.home.com>
Source record: 55490

I have a pro-2050 and am happy with it. The only thing that I have never liked about it is the fact that I can't listen to non-trunked freq at the same time. Is this what is referred to as the multi-trunk .I have also seen dual trunk listed. Can some one explain the difference and point me towards what kind of scanner would do what I am looking for? And any recommendations on what the best one is would be of great help.

Thanks
Dave

Somewhere along the line I remember seeing something about an audio adapter that you could hook up to play a scanner's audio thru the car speakers.

Is this thing any good? And who sells this product?

Thank You for Replys!!!!!

# 3743. Now available: freeware PC software for PRO-93 and PRO-2053

Newsgroup: rec.radio.scanner
Date: 2001-12-17 01:57:36 UTC
From: 93SW <no@spam.net>
Message-ID: <kicT7.44493$Pk6.10496564@typhoon.southeast.rr.com>
Source record: 55493

An unsupported freeware file transfer utility for the PRO-93 and PRO-2053 scanners has been posted in the Files section of the PRO-93 Yahoo Groups site. It works with the PRO-92 cable or any of the home made cables that work with the PRO-92. It will allow you to create a file and send it to the scanner. It will not read the scanner. Use it at your own risk. The link below will take you to the file. You may need to join the Yahoo groups first if you are not already a member.

http://groups.yahoo.com/group/PRO-93/files/pro-93.zip

Again, this is "as-is", unsupported freeware. Use at your own risk and use with caution.

Please spread the word about this software. Many users have downloaded it and report that it works fine. Apparently it is not compatible with Windows 2000 or XP.

More information is available on the Strong Signals website on the Trunking board.

Enjoy!

Take a look at the Yahoo Pro-93 message 131, "Serial capture program -
download your 93/2053 to your PC", for info on a program that will let
you read the scanner.

Freeware, own risk, etc.

It sounds silly on the surface, but if you look at the underlying
meaning, it's more like "It's so crowded (with chatter, lowlives, and
interference), that no one (decent, interesting people) use it anymore".

Being a CB veteran of over 30 years, I can say with some certainty, that
while the QUANTITY of users on CB may be still fairly high, the QUALITY
of the people has certainly dropped.

Source record: 55354

Apologies in advance for this off-topic post but I thought one of the tech experts around here might be the likely source for the question I'm about to ask:

Does anyone know what the white plastic connector in this photo is called and as important where I might be able to find it? It's white plastic, triangular and connects three wires. The gizmo in the pic is for a motorcycle and is designed to plug into the bike's wiring harness. I'm after those connector.

http://secure.cartsvr.net/product_images/catalog2486/picname510315.jpg

Any ideas would be much appreciated.

# 3754. FS: Yupiteru MVT7100

Yupiteru MVT7100 continuous coverage handheld scanner. I believe this model is still in production and has received outstanding reviews since it's inception.

With the exception of needing a memory backup battery, the unit is in excellent working and very good physical condition showing only the typical wear on one or two buttons and around the top controls.

Includes; Original packaging, AC adapter, telescoping antenna and 3rd party English manual.

Terms are PayPal payment only. Buyer pays for shipping & handling of their choice. Best offer by close of business (5pm EST) on December 19th takes it.

I'm offering this unit in good faith and expect the same courtesy. It's really very simple, if you make an offer then I expect you to honor your commitment.

Not a toy at all. I like mine a lot. If I have one criticism, it is that it does not contain an internal ferrite antenna for am broadcast, but that's not for what I primarily use it.

Definitely NOT a toy. I have one and think it's great. Good sensitivity,
wide coverage - but not what you should have as your ONLY scanner.

It is most likely a proprietary house part for that particular brand of bike. Translated that means you can't get it anywhere else and they are gonna gouge the hell out of you when you do buy it from them.

If its just the plug you need, you may try some of these junkyards that are linked into a nationwide network. They might be able to get on off a wreck somewhere.

Hi,
Has anyone had any problems with the Windows cloning software for the Icom IC-R2 from RT Systems? I tried to install it and it doesn't want to install a window pops up and says there's a I/O problem with the media (31/2" Floppy).

Is there any other software out there preferably free that can at least get me started? I would love to be able to get this thing all programmed fast and easy.

Thanks in advance
-Bill

Radio Shack part 20-048. $15, comes with a cable and Windows CD.
It's an in-store item at Shacks that carry much scanner stuff.

The cable is pretty simple. DB9 at one end, 1/8 inch stereo plug at
the other. Pin 5 (ground) goes to the barrel of the mini-plug, pin 3
(TX) to the ring, nothing to the tip. Same cable as for the PRO-64.

Don't know anything about the software, but if they're selling it it
must work.

Source record: 55384

You might want to add the "GMRS" frequencies as well. Since GMRS handhelds are now being sold at Wal-Mart, Target, Best Buy, etc., (usually with little or no mention of the required FCC license), GMRS has now become a type of quasi FRS in most areas.

# 3784. GMRS handhelds being marketed as FRS radios. Your thoughts?

Newsgroup: rec.radio.scanner
Date: 2001-12-18 15:09:58 UTC
From: toomanyradios@aol.com
Message-ID: <20011218100958.25754.00001276@mb-fi.aol.com>
Source record: 55385

This Christmas season, I have noticed small GMRS handhelds being sold as "family radios" at mass-merchandise stores. Wal-Mart, Target, BJ's Wholesale Club, Best Buy, and others are now selling these radios.

Audiovox started this trend with the GMRS-1525, and has now been joined by the likes of Midland, Uniden, and others. Sold in blister packs, often in pairs. They look, smell, and taste like FRS radios, but with a big difference:

On the packaging, much is made of "4-mile range" and "2 watts of power." Little or no mention is made of the FCC license which is required to transmit with these radios.

Apparently, these are becoming quite popular as the "next generation of family radios." A quick check of GMRS frequencies on the scanner revealed lots of children, call tones, and roger beeps. Just like the FRS frequencies.

What are your thoughts on the manner in which these radios are being marketed?

Legal?

Ethical?

I know exactly what you mean. However, there IS a note about the license requirement, at least on the Audiovox units. This, however, goes un-noticed as it is located on the back of the package, the print is the same size as all the rest back there, and is located near the bottom of the package; the most un-looked at part of the whole package...

I think it stinks... Buying such a unit in such a store type, nobody is going to care about the license requirement. Most people don't even know that a license is required, until after they buy the things. Then again, they may not know at all, if the note about the license requirement is hidden as well on the inside as it is on the outside... (a small notation at the bottom back of the package for the Audiovox units; easily missed amongst all the other crap back there...)

Yes, go to www.butel.nl and get their software for the R2. Much better than what comes with the R2.

I'd say they saw Radio Shack's success with selling cheap 10 meter and 2
meter ham rigs to non-licensed people and decided they wanted to share in
the profits, too.

wrote:

>What are your thoughts on the manner in which these radios are being marketed?

Legally, they're doing nothing wrong. Ethically there is a real
problem at hand. It's the same damned problem that hams have had to
deal with for decades: Should you have to prove your qualifications to
purchase a transmitter or transceiver?

Should there be a point of sale requirement to present a license to
buy a product whose use requires one? And if there should be such a
law, then how hard should you enforce it? How many loopholes should
you allow for?

This is a broad issue because it extends to many other things
including pharmaceuticals, firearms, motor vehicles, explosives, and
chemicals --to name just a few.

And the Internet is making the mess even bigger. International
commerce is easier than ever before. Even if point of sale license
verification is the law of the land in this country, there are others
who couldn't care less.

Frankly, I tend to think that the issue is not the sale of the box
itself but the use it is put to. And this is where the fun starts.

I'd suggest packaging that includes a prominent warning about needing
a license, but I also know that nobody enforces such things any more
unless the unlicensed user manages to become a truly obnoxious pest.

In a perfect world I think it would be really cool for a radio club to
go on a DF hunt for the unlicensed idiots and prosecute them as a club
seeking damages from an individual conducting an unlicensed operation.
Unfortunately, I'm pretty sure only the Federal lawyers can do this.

Maybe we could start a campaign to allow national organizations to
prosecute unlicensed individuals in federal court...

Anyone interested?

Source record: 55391

Sure it's a toy, but it's also a real radio. The R2 is one of the most
sensitive vhf/uhf receivers I've owned (<.2uv for 12db sinad). The
audio is good for something so small. It's pretty bad on hf, so don't
plan on doing much dxing with an R2. It has "the Icom Problem"
in that it will only scan one bank at a time. I usually use my R2 for
my local PD/FD./EMS channels when I want something pocket-sized.
It's great for that.

Sorry, I mean't that the R-2 isn't well suited as a first scanner. There are a lot more scanners available with better features that are a better choice.

Hi,

I'm looking to improve broadcast band reception for my ic-r2. I use it at work because it is small and portable. Unfortunately, the building is made of concrete and steel. Does anyone have any ideas on how I could better the reception in such a building... there are no windows or doors near my area in which I could put an outside antenna. The antenna that comes with the ic-r2 doesn't seem to be any good in these conditions.
The station I'm trying to rcv. is only 15-20 miles away as the crow flies. (960 weli if ya want to know).

Any help would be great. thanks in advance.

-Bill

your best bet is internet radio. or a tape/digital recorder. unless
you can run a long wire from the receiver at your desk to a window, and
drop 20 feet of wire out the window. faraday cages really do work!

2 Police Call Directories
And a box full of new scanner radios!!

On the Third day of Christmas, my true love gave to me:

3 Antenna couplers,
2 Police Call Directories
And a box full of new scanner radios!!

On the Fourth day of Christmas, my true love gave to me:

4 cordless phones
3 Antenna couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Fifth day of Christmas, my true love gave to me:

5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Sixth day of Christmas, my true love gave to me:

6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Seventh day of Christmas, my true love gave to me:

7 Scanner Crystals
6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories

And a box full of new scanner radios!!

On the Eighth day of Christmas, my true love gave to me:

8 Trunking Radios
7 Scanner Crystals
6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Ninth day of Christmas, my true love gave to me:

90 Feet of Coax
8 Trunking Radios
7 Scanner Crystals
6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Tenth day of Christmas, my true love gave to me:

10 Police Blue Light Bars
90 Feet of Coax
8 Trunking Radios
7 Scanner Crystals
6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Eleventh day of Christmas, my true love gave to me:

11 Unknown frequencies
10 Police Blue Light Bars
90 Feet of Coax
8 Trunking Radios
7 Scanner Crystals
6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

On the Twelfth day of Christmas, my true love gave to me:

12 Days sitting at dispatch
11 Unknown frequencies
10 Police Blue Light Bars
90 Feet of Coax
8 Trunking Radios
7 Scanner Crystals
6 Mounting Brackets
5 Magnet Mounts
4 Cordless Phones
3 Antenna Couplers
2 Police Call Directories
And a box full of new scanner radios!!

> law, then how hard should you enforce it? How many loopholes should
> you allow for?

Here's a few more wrinkles for you. Let's say it's the holidays, and a non ham wants to buy a gift for a ham. Happened to me last year, I passed my general exam a week before Christmas. My wife snuck out to rat shack and bought me the 10 meter rig I'd been eyeing for a while. A non-ham buying ham gear for a legitimate use, and it has never been used illegally. (And I even used it to contact Luxembourg last weekend! Way cool.)

> Frankly, I tend to think that the issue is not the sale of the box
> itself but the use it is put to. And this is where the fun starts.

I agree. Many many items are sold for legitimate uses, and are then put to illegal use. How about when a crook uses a scanner, or someone buys an axe or knife and uses it to hurt someone? Should we then start licensing those?

> I'd suggest packaging that includes a prominent warning about needing
> a license, but I also know that nobody enforces such things any more
> unless the unlicensed user manages to become a truly obnoxious pest.

True. We have one in our area messing with a repeater, and is quickly becoming obnoxious.

> In a perfect world I think it would be really cool for a radio club to
> go on a DF hunt for the unlicensed idiots and prosecute them as a club
> seeking damages from an individual conducting an unlicensed operation.
> Unfortunately, I'm pretty sure only the Federal lawyers can do this.

I don't think they can seek damages, but clubs CAN do the hunt, and audio/video tape the transgressor. They can then document this info and send it to the FCC, who will then work on it. From what I understand, if you can supply audio tape plus a pretty good idea of who the idiot is, the FCC will be likely to take some action. Otherwise, forget it.

> Maybe we could start a campaign to allow national organizations to
> prosecute unlicensed individuals in federal court...

Hmm, I dunno. It would be interesting to see what could be done about someone abusing a repeater. After all, a repeater is private property, owned by an individual or club. Everone is on there as a guest of the licensee. If someone were to abuse that, I'd think there'd be something that could be done.

# 3806. Recording ONLY when a digital tone is heard

Newsgroup: rec.radio.scanner
Date: 2001-12-19 05:33:44 UTC
From: Daniel <daniel54@iprimus.com.au>
Message-ID: <3c2026c9_2@news.iprimus.com.au>
Source record: 55407

I reposted this from a Australian scanner newsgroup as I didnt get a answer there....In Australia when somthing important is going to be broadcast over the scanner.....a 2 second Beep is transmitted before they call the job....this is called a "Memo"......
here is the copy/paste.....(sorry if i am breaking some rules)

I was just curious....with Christmas almost upon us, and the increase in activity this brings to our scanners....
I was curious if there was a scanner recorder which instead of just recording everytime squelch is broken, starts recording when it receives a digital tone....i.e. when a beep for a Memo or important event is broadcast on the police frequencies?

Perhaps such a program could be set up so it records for 20 minutes after each beep is detected?....or any set time?

I believe something like this would be a boon to the circumstances I find myself in each Christmas.....My missus throws large objects at me if I spend too much time in front of the scanner/computer over Christmas (perhaps rightly so!) despite my protestations of this being the most exciting time of year to own a scanner. lol

Maybe another way is a way of searching recorded files for such a beep?

Uhh, folks, from what I've heard from a source whose opinion I
respect, this already exists in cellular telephony systems.

It doesn't surprise me that there are many who don't know that,
however. Somebody needs to set these guys straight before things the
ignorant perpetrate stupidity, though.

Daniel,

Do you know what the freqency of the beep is? I can probably help you make
a circuit that will decode the tone and simulate a button push or whatever.
More details of the tone please

I believe you set up the handset to have a primary base, but they can be registered to two bases. That should "effectively" increase your range since the handset should automatically switch between bases. What you cannot do with this setup is intercom, conference or transfer calls between a handset on one base and a handset on the other base (or really anything on one base with the other). Since you have to phone lines connected to each base the bases are acting independently. There is no "connection" between the bases. I don't know what would happen if you answered a call with a handset on one base and then walked out of range toward the other base. My guess is that you would eventually drop the call when you go out of range of the first base. Your range is still "effectively" increased for getting calls, but you are limited from there.

This is just what I've gleaned from having one for the past two years. FWIW, the newer versions appear to have a much better range as well as some easier to use features.

This has been in place for years. Each cell phone, when programmed, has a priority code. This way police, and government phones will have priority over normal programmed cell phones. I reprogrammed mine years ago, so that it has the high priority setting too.

I comprehend all of what you said. PART of my point was that why, given the same "relative" wage as that paid some years ago, do the employees at RS (who are making the same, albeit increased, "relative" wage as years ago) seem to not know what they are doing (unlike those more knowlegeable employees I am fondly remembering)?

Excellent condition! Have everything as new, box, manuals etc. It comes with the following: UT-106 DSP Unit; UT-102 Voice Synthesizer Unit; CR-282 High-Stability Crystal Unit, plus the following filters: FL-223 1.9kHz for SSB and FL-52A 500Hz for CW/RTTY. This unit is Loaded! During the holidays Icom is selling this popular model with DSP for just under $600; the above has over $400 of added features for a little more. I guarantee this unit to be as described. Asking $700.00 including shipping in US.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you
will find lists of Ontario radio frequencies that are not listed on any web page, published
in any scannner book (Haruteq or Scantrix) or listed in the government frequency list
(Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner
radio hobbyists so they have a public forum to be able to chit chat with each other about
anything relating to the radio scanner hobby in Ontario as well you will be able to recieve
updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

I aint that technical!! lol Sorry.
Was just curious whether there was some software out there as I reckon this
is a good idea.
Perhaps the software in question might be able to detect the digital
beep......my scanner has a data setting so it doesnt get stuck on birdies
and digital freqs when searching the bands...so I guess it can be done.
ATTENTION ALL PROGRAMMERS.....lol
Thanks for the rely though.....but I am a complete moron when it comes to
soldering irons etx!

This was posted on StrongSignals.

<snip>
Uniden Digital Scanner Info
Posted on 12/19/2001 07:00 EST

Word from Jeff at the Ham Station in his most recent talks with Uniden is that the manufacturer plans to display more info about their upcoming digital scanner (which Uniden plans to roll out in the fourth quarter next year) at their booth at January's CES in Las Vegas.
LINK: 2002 International CES
</snip>

Source: StrongSignals.net
http://www.strongsignals.net/access/news/news.cgi?type=single&section=radio&entry=231

That will be cool to see some photos/demos of their new scanner. Let's hope they really do have it at CES. Also I want to know what's the deal with this company called Scannermaster who said they were releasing some addon for the BC780XLT? I saw some photos of their booth at Dayton which had some poster and it said coming in 2001, digital monitoring solution. Is this BS??

Greetings,

Brandon

My guess is that the times have changed to discourage learning in the way we understand it. When many of us were learning about electronics there were lots of sources to maintain your interest such as Elementary Electronics, etc. which encouraged you to use your component knowledge. When you look at the equivelant literature now you'll see there's no learning situation for the beginner. IMHO
Dennis

Apparently what is happening is that the 2021 was emitting a L.O. signal on the antenna line that was desensing the 64. If you want to run two scanners on the same antenna, you need to use a splitter, such as is sold for TV sets. You need one that is made for antenna reception, range 30-900 MHz. The ones made for cable TV only run to 500 MHz. This is assuming you intend to scan above 500 MHz. This is a 75 ohm splitter, but the actual problems due to mismatch are minimal or none, and it's certainly a lot better than just using a tee to split the antenna feed.

Yeah, but you have to turn the horizontal beams that are the elements of
the antenna 90 degrees so that they're vertical, and it'll be directional -
that's
what TV antennas are - so you'd have to point it toward what you want to
hear at the expense of what you'd receive in other directions.

Mine bit the dust about a year ago and I miss it. I have not found anywhere that services this radio...Sony does not support it anymore either.
I have been told that the electrolytic caps die young in these radios and some other Sony products like camcorders also. Some day I am going to pull it open and attempt to replace them. It probably won't be long before you radio dies completely.

I have a VR500 which is a beautiful little receiver. Far more sensitive than the UBC3000XLT I had previously. My only criticism is that it is a bit unfriendly to use, as they've had to make pretty good use of the limited number of buttons available. Once it's programmed though it's great.

Cheers.

Ken

Yup that's what I use, in the attic I couple in a Discone and a Turnstile
for 30-1 Ghz
coverage. Feed into a Radio Shack 40-2050 satellite combiner/splitter (power
pass on Satellite Port). Then into a 30-950 Mhz Broadband preamp.This goes
into
60 feet of RG-6 then split off in the shack with another Radio Shack 40-2050
splitter/
combiner. The VHF side goes to a 4 Port High Quality low loss Splitter
feeding
four scanners and the 900 + Mhz port feeds into a 950-2050 Ghz Satellite amp
then into a High Quality 40-2050 low loss Splitter fed by a DC Power Supply,
Second port is DC Trapped with a DC BLOCK and fed into a 900 - 3 Ghz
Multimode
Receiver.

Works great!

(PS) all my feedline is High End RG-6 and I know to the 1/2 db my system
loss and
S/N ratio from 30 Mhz to 3 Ghz.

No Birdies. Just hours of enjoyable listening!

73

Terry

Actually what I should have said, is will they even be selling scanners by
next year? They've really been cuttin back on them lately.

Source record: 55141

> Is it possible to listen in a direct connect conversation?

Nextel's over-the-air transmissions are TDMA signals (digital).
You will not hear any useful information using the present
generation of analog scanners. In TDMA systems your voice
is sampled (digitized) and then transmitted over the air in bursts
in time slots ... hence TDMA = Time Division Multiple Access.
There are either 3 users or 6 users sharing the physical RF
channel so each user is assigned 1/3 or 1/6 of the time as
their digitized burst transmissions are sent. The receiving handset
has to be synchronized to the proper RF channel and time slot
to receive the digital signal and decode it back to human sounding
voice.

You'll find more than you can digest on this topic if you search
at http://www.google.com using keywords such as TDMA, FDMA,
CDMA.

Hope this helps! Have a good holiday season :-)

I have one and it works pretty good, especially if you just want something to replace the rubber ducky, and have good general reception. But for 800 Mhz monitoring, I think the Max Systems 800 MHz Portable Antenna works much better.

http://www.google.com/search?hl=en&q=Max+800+antenna for more info

Howdy,

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1311352854
currently $20.50 w/ 3 days left.

Specifications
Vintage 1987
Type Handheld
Ranges 29-54 / 108-174 / 406-512
Channels 100
Banks 10
Modes AM, FM
Priority 10 channels
Conversion Double
Scan 15 channels/second
Search 25 steps/second
Audio 480mW
Power 12V DC
Size 2.75"(W) x 7.5"(H) x 1.25"(D)
Weight 20 oz
Interfaces BNC, DC, speaker
Features Duplicate frequency alert

Thanks for looking.

I have been experimenting in the 900 mhz range. I receive clear signals but the conversations break up so I don't get to hear all of what is being said. I use a scan-tenna for outside and a Radio Shack 20-006A on my handheld. Is there anything I can do to eliminate the break-up? Thanks in advance.

The JRC NRD-545 DSP is a fine shortwave receiver.

I wrote tk545, a new computer program which lets you:

(1) Control the NRD-545 from your computer.

(2) download/upload the radio's memory channels from/to a
csv (comma-separated values) file.

tk545 provides 1 Hz resolution (vs. the 10 Hz shown on the radio's
front panel). It lets you easily adjust the DSP,
Line Enhance, and Beat Canceler parameters while listening
to signals. These parameters are buried within the NRD-545's menus
and are otherwise difficult to tweak when using the radio's
front panel.

Though I've all but abandoned Windows 98 in favor of free Linux,
I wrote tk545 in a language (Tcl/Tk) which permits it run on either
operating system. It may even run on Macs, Solaris, and other
environments, but I've only tested it on Linux and Windows 98.

You can read about and download a beta test version of tk545
from my home page:

http://members.core.com/~parnass

I don't warrant the software, but it won't cost you anything.

> Thats sad!

I went to my local rat shack today, it is by my bank in an old
shopping center that is being torn down, a new location is up on the
other side of town and this nearby rat shack will soon be a crosstown
journey for me.

Went in to get some ferric chloride cause I just hate mixing the stuff
myself and I went in on the chance that they would have a couple of
330 pf capacitors.
I am usually well stocked on components but just needed a couple of
the capacitors and am not ready for a new order to mouser or
electronix express.
btw, they had the capacitors, lol, and much to my surprise
hahahahahaha.

This radio shack used to have approximatly 30 linear feet of wall
space for components and circuit related items, it has now dwindled
down to about 6 ft of space for electronics components and accesory
items, it is mainly leftover junk. they were surprisingling well
stocked in overpriced ceramic disk electrolytic and polyester
capacitors, hahahaha. had a few common ics and transistor selection
was limited to 3904s mpf102 jfets and 4401s in addition to a bulk pack
of npn switching transistors. had a good variety of perfboard products
but no connectors or jumper wire sets, no alligator clips etc....

The guy there said they would always carry a selection of components
but it would be on a much smaller scale than before, he mentioned rat
shack . com and the fact that you could order a lot more from the
store.

I like radioshack for pre mixed ferric chloride, I do buy things there
when I get cabin fever and need somewhere to kill a little time, with
them moving across town now I will probably go just for the ferric
chloride and will attempt to be better stocked on the more common
items.

I know a lot of people rant on the shack because of what they have
become but I guess that is progress.... I have always liked the stores
if not for anything else than just a place to go and kill time, look
at the electronics etc....

ferric chloride was 3.49 for a 16 ounce bottle, I cant buy the mix and mix it myself for that price so I consider that well worth the trip.

330 pf capacitors were in a bulk assortment pack of 80 caps, 1-470 pf, I probably paid a lot more for the caps but it is good assortment and it saved me from having to make an order for a lot more than I currently need just for 2 caps. Yes I could made up the caps using other values I had but I wanted a small neat circuit with one cap where I needed 1 cap.

I weep for my old radioshack, useless as they are they are still a friend.

The Uniden Digital Receiver will be out in fourth quarter
2002. It will be displayed or information given at the CES
expo in Las Vegas.

Pretty much after the advent of PCs at an affordable price, interest in building anything electronic waned across the US. Kids stopped wondering how things worked, and started wondering how they were going to get the more expensive, latest version of whatever electronic gadget they owned currently.

Last year, for Christmas, I got my 8 year old a crystal radio kit. He was quite annoyed that it did not come with a CD option and Gameboy interface... *sigh*

Listening to CHP Inland Division 39 MHz freq's right now. Hearing a lot of "down south" sounding conversations at the moment, esp. on Turquoise-1 39.68 and Beige-1 39.88. If memory serves correctly these other agencies use a tone of 118.8 because I've heard them on the other scanner with CTCSS turned on.

How long is the antenna? For this frequency, you need an antenna of about
5 inches long maximum for efficient reception. Try varying the antenna
length if you have a telescoping antenna. This is not the only
modification you can do, but probably the easiest.

A couple of weeks ago I went to my local RS to get an optoisolator and discovered, as you did, that they no longer carry many electronic components. I checked their catalog, and found what I wanted, but as RSU items (must be shipped), and the price was high, and had shipping on top of it.

Then I went home and logged onto Radioshack.com, found what I wanted (at less than half the RSU prices), and with shipping included. So I ordered a variety of items, and the box showed up about 2 days later.

In a way I regret that so many items are not available retail, however the cost of inventory, etc., and the limited demand, do make reducing inventory practical. I am glad that radioshack.com had the items at a decent price. Ordering the RSU items is absurd.

Carl.

Source record: 55345

Recently, I was able to sample several new duckies for my 235XLT.

They ranged in price from free (the OE duckie) to over C$100.

I tried the VHF band and the 800MHz band, both inside the store and outside.

No aftermarked antenna was better than the OE duckie.

Of course, it might be an impedance mismatch problem. Whatever it was, I found myself happy with the stock unit.

Be sure that you test the duckie with your unit before you buy.

The FM transmitter style adapter from Radio Shack is total junk. I tried it out and immediately returned it (and it was obvious from the package that it had been returned at least once before I got it). The fidelity is terrible, and depending on the FM broadcast frequencies in use in your area, the very limited choices the transmitter offers may conflict (as they did for me in central NJ), rendering it utterly useless.

The cassette style adapter from Radio Shack (and elsewhere) will work much better, assuming you have a cassette deck in your car. Less convenient and a little noisy, but way more effective overall. The cassette adapter may also pick up interference from your cell phone in the car (low frequency buzz when it's transmitting, not voice).

>encryption threaten the hobby?

Well it will make the hobby more expensive and you may see some PD
using encryption, however fire and paramedics will never be encrypted
and another item is the cost of digital systems for users and listeners.
I hope the cost will drop below $500 for receivers in a couple of years, but
only time will tell.

I for one don't miss them a bit. I got into it as a hobby when I was a kid. Ripoff shack was my only source for parts (the only good suppliers were downtown and I was in the nether reaches of the east end). Even back then the salesdroids they employed were often ignorant and downright rude. On top of that the parts they did have were terribly overpriced (the estimate of 2000% overpricing is conservative). About the only thing that kept them going with electronics hobbyists in the 90's was their flirtation with a couple of HT's for the ham radio crowd and a a few scanners. I really am surprised that anyone is concerned that RS is abandoning their parts line. Frankly they've been the bottom of the barrel for years and I certainly won't miss them one bit.

AMATEUR RADIO NEWSLINE(tm) REPORT #1271 - DEC 21, 2001

Amateur Radio Newsline report number 1271 with a release date of Friday, December 21st, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. A national ham radio society is asked to train new hams for government service. This story is first on this weeks Amateur Radio Newsline report number 1271 coming your way right now.

(Billboard Cart Here)

**

THE EDUCATION SCENE: HAM TRAINING LEADS TO SA GOVERNMENT JOBS

A government agency has asked a national ham radio society to help train new hams. The reason. careers with that agency. Its happened in South Africa as we hear from Q-News Graham Kemp, VK4BB:

--

In South Africa, their Department of Communications contacted the SARL with the request to train seventeen post graduate students as amateur radio operators. These students had already qualified in different fields, some technical and some in the Information Technology fields. There were nine ladies and eight men. From next year they will be employed by the Department of Communications, and the idea was to give them some experience in the field of radio communications.

Training was done by Henry Chamberlain, ZS1AAZ, over a period of one full month. In addition to lectures, the students could see practical demonstrations of amateur radio and they spent one period building and testing a Morse Code practice oscillator. They also visited ZS1AAZ's home shack. The seventeen students had already proved their ability by passing their previous studies successfully. It was therefore no surprise that they ALL passed the amateur examination.

For the Amateur Radio Newsline, I’m Graham Kemp. VK4BB, of Q-News.

--

The seventeen will be assigned specific jobs with the South African Department of Communications in early 2002. (SARL, Q-News)

**

SPECTRUM SHARING: FCC SAYS YES TO HIGHER POWER UNLICENSED TRANSMITTERS AT 2.4 GHZ

The FCC has approved issued new rules permitting certain unlicensed Part 15 devices operating between 2405 and 2450 MHz to use higher power, but under significant restrictions. The band is allocated to amateurs on a co-secondary basis. Amateur Radio Newsline's Norm Seeley, KI7UP, takes a look at the FCC action:

--
According to the C-Q Magazine website, the decision was adopted on December 11Th. In it, the FCC approved a petition by Sierra Digital Communications, Inc. to permit unlicensed fixed point-to-point transmitters in the band to operate at field strengths of up to 2500 millivolts per meter. This is a tenfold increase over past power limitations.

Sierra Digital Communications manufactures and sells equipment for wireless data communications, including high-speed wireless computer networks and Internet links. The ARRL had opposed Sierra's petition on the basis of increased risk of interference to amateur and amateur satellite operations. This is because the downlink from the AO-40 satellite is in the 24 GHz band.

But the FCC said it believed the restrictions it is imposing on the higher-power transmitters will provide sufficient protection to other users. This includes industrial/scientific/medical equipment, radar and Earth exploration satellites, in addition to amateur radio. The new rules require highly directional antennas and high frequency stability of transmitters.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

In its decision, the FCC singled out an ARRL comment where the League clamed that Part 15 devices are permitted by the Communications Act of 1934 only where they have no interference potential to licensed services. The Commission called the League's interpretation of the law overly conservative. It said that its rulings to date appropriately provide a means for allowing unlicensed devices to share spectrum with licensed services with little risk of interference and adequate protection to licensed service. (CQ)

**

HAM RADIO AND THE WAR: MARS ON THE AIR FROM THE WAR ON TERROR

Ham radio is making it possible for those fighting the war against terrorism to phone home. This as the ARRL Letter announces that Army Special Forces on duty in Islamabad, Pakistan, and in other undisclosed locations have begun keeping in touch with home via MARS -- the Military Affiliate Radio System.

Phone patches provided by the Military Affiliate Radio System make it possible for troops to call their families in the US from areas where commercial communications channels are not available. Amateur Radio operators enrolled in MARS provide the connection between the Military Affiliate Radio System stations deployed overseas and the telephone system back home.

During the Vietnam War, phone patches were a major source of comfort to families and service members alike. MARS also responded during Operation Desert Storm. (ARRL)

**

BREAK 1

Wishing you a Happy Holiday from the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Great South Bay Amateur Radio Club repeater, W2GSB, serving West Babylon New York.

(5 Sec Pause Here)

**

HAM RADIO AND THE WAR: GODDARD ARC FEELS THE PINCH

The Goddard Amateur Radio Club says that it has been having serious problems with manpower lately and the war on terrorism is partly to blame. This is because new security restrictions imposed after September 11th require all visitors to Goddard to be escorted by a badged employee at all times.

According to Dan Schultz, N8FGV writing to the Amsat Bulletin Board, the clubs WA3NAN ham shack is located on government property we are bound by the new restrictions. This says Schultz makes it much harder to bring in control operators who are not Goddard employees. As a result, WA3NAN which for years has been the primary rebroadcaster of shuttle communications on the ham bands is not there as often as it would like to be.

Schultz also notes that the Goddard Amateur Radio Club currently has no president because no one has stepped forward to accept the job. The position of Shuttle Retransmission Director is also vacant, this is the person who makes the phone calls to get operators lined up to pull shifts at the retransmission facility.

Schultz says that the long term technical solution will be to automate the station with remote controls and telemetry for the transmitters so that the retransmission operator can operate from his home. But adds N8FGV, but that is still a little ways off in the future. As a result, WA3NAN is not there as much as it used to be. (AMSAT-BB)

**

AMERICA AT WAR: NEW HOMELAND TERRORIST ALERT SYSTEM PROPOSED

Homeland security chief Tom Ridge is considering a multistage system for terrorism alerts. Ridge is also weighing how to reimburse states for the costs of increased security since the terror attacks.

Since the September 11th terrorist attacks on New York and Washington, Ridge has issued three general warnings. None of the alerts identified specific targets.

Now, according to news reports, Ridge will propose a four-stage Threat Alert Network similar to the military's DEFCON'' system. DEFCON alerts military personnel to the seriousness of a threat. A private sector version would be aimed at helping state and local law enforcement personnel determine the level to react to a Federal government issued terror warning.

The proposal came to light after California Governor Gray Davis met with Ridge about a week and a half ago. Davis told Ridge he had proposed such a similar system for California, and said Ridge had asked him to wait pending a national model. Ridge told Davis that he hopes to unveil the national system by January 15th of 2002. Whether or not ham radio will play any part in such an alert system is not known as we go to air. (Published news reports)

**

AMERICA AT WAR: CONFERENCE HELD ON ALERTING THE PUBLIC

Still in there area of alerting the public, more than 120 leaders from the emergency warning community met November 30th and unanimously called for the creation of a public-private partnership. This, aimed at improving the delivery of timely and accurate emergency information to people at risk. Don Wilbanks, KC5MFA reports:

--

The group came together at a special conference arranged by the National Warning Organizing Committee. This is a group of emergency warning advocates representing the public and private sectors.

Those attending included federal, state and local government officials, not-for-profit organizations, and representatives from the private sector. And in the end the group has tasked itself to improve the delivery of warnings and emergency information to the public. This, through better education, research, standards creation and policy recommendations.

The Committee Chairman is David Liebersbach, Director of the Alaska Division of Emergency Services. He has appointed Peter Ward, formerly of the U.S. Geological Survey and chair of a White House-appointed working group on natural disaster information systems, to head up a committee to determine the new organization's structure and governance. Ward also serves as the new organization's spokesman. More news on the work of this committee as information is released.

For the Amateur Radio Newsline, Don Wilbanks, KC5MFA, in New Orleans.

--

The conference was hosted by The MITRE Corporation in McLean, Va. MITRE is a not-for-profit national technology resource that provides systems engineering, research and development, and information technology support to the government. (MITRE)

**

HAM RADIO AND EDUCATION: HAM RADIO MASS BALLOON LAUNCH

The Timberlane Regional High School, in Plaistow New Hampshire will be taking part in a high altitude experiment next spring. This with an announcement that the Coordinated Algebra II and Physics classes taught by Lorainne Mascioli, N1VYQ, and Lou Broad, N1RCA, are planning thier third year of ham radio and high altitude balloons in May of 2002.

Six student teams will attempt to launch their balloons at the Hosstraders Ham Fest at the Hopkington Fair Grounds in New Hampshire. Each team is responsible for design, construction, and operation of their system. Each balloon will carry a GPS receiver, a packet reporting system and several experimental payloads. This could include cameras, video, amateur television and cross band repeaters. At maximum altitude such systems will have a range of 300 miles and should easily cover all of New England and more.

The class has grown to 34 students and they are planning to launch six balloons in a two day period! This could make it a record breaking event in both ham radio and high altitude ballooning. For more information check out the CAPSAT Website located in cyberspace at
http://www.mv.com/ipusers/llb/capsat.html (Via Internet)

**

HAM RADIO SPOTLIGHTED IN POUGHKEEPSIE JOURNAL

New York’s Poughkeepsie Journal has highlighted ham radio in a December 6th front page article. The piece focused on the public service aspects ham radio with quotes and pictures.

According to Andrew Schmidt, N2FTR, who is an ARRL Assistant Director in the League’s Hudson Division, many Poughkeepsie area local hams spent time at Ground Zero or at the Red Cross centers in the greater NYC area following the September 12th terrorist attacks. Andrew says that their work is well highlighted in the article. The link is:
http://www.poughkeepsiejournal.com/thursday/community/stories/co120601s12.
shtml. (Via Internet)

**

A SPECIAL AM EVENT: THE HEAVY METAL RALLYE

This is Paul Courson WA3VJB with news of an operating event Saturday night, December 22nd. It's the Heavy Metal Rally, featuring big iron, vacuum tubes, and the warm and inviting sound of AM on the shortwave ham bands.

Starting around local sunset listen for rigs in the 250 watt or 250 pound category to populate AM gathering points on 160, 75 and 40 meters.

Jim, W8MAQ was testing HIS 1947 Collins 300-G a few days ahead of the Heavy Metal Rally. The retired broadcast transmitter re-tuned to 75 meters sounded like this:

In-Q: it's been great to get on... 300-G..
Out-Q: forward to that

--

Prizes include a trophy, pictured as a posting on QRZ.com, for the best sounding station.

Last year more than a hundred stations took part -- and the winner was Mike, WN3B, on a Gates 250-C. He gave Jim an audio report the other night:

--
In-Q: It's got more highs....
Out-Q: Shure 55
--

The Heavy Metal Rally is sponsored by Electric Radio, a magazine featuring vintage ham radio, and published by Barry N6CSW. The event was pioneered by Bill, KD0HG of Colorado, a broadcast engineer with a knack for big homebrew rigs that sound great.

Frequencies and a website are listed on the news page of QRZ.com.
Paul Courson, WA3VJB, Annapolis Maryland.

**

HAM RADIO HISTORY: COLLINS RADIO CENTER NOW OPEN

The new Collins Radio Center which is the headquarters for the Collins Radio Association is now officially open for guests and visitors. Located near Johnstown, Pennsylvania, the Collins Radio Center includes a representative collection of Collins radio equipment, from the 1930's to the present. There are other classic and antique radios on display as well. More information is on the web at www.collinsra.com. (Collins RA Press release)

**

HAM RADIO BUSINESS: CITY ELECTRONICS - RIP

Alex Stalinsky, WA5UHT, who owns City Electronics, a small parts outlet in Houston for almost 50 years, has decided to call it quits. According to Chris Boone, WB5ITT, this place was one of the main sources of parts, components in Houston long before the likes of Mouser and Digikey took off in mail order sales.

Chris tell Amateur Radio Newsline that he bought many parts from City Electronics in his early days of repeater building. In fact, Chris says his mother claimed that he owned half of the local Radio Shack but she was wrong. It was really like he was a part of City Electronics as were many other young Houston area hams and Chris tells Amateur Radio Newsline, it will be missed. (WB5ITT)

**

BREAK 2

By telephone, satellite and the World Wide Web, we are the amateur Radio Newsline with links to the world at our only official website - www.arnewsline.org.

**

EMERGING TECHNOLOGY: INTELS NEW WARP SPEED CHIP

In another step toward faster computers, Intel Corp. has developed two new technologies that will help the tiny transistors inside microprocessors run cooler, use less power and operate more efficiently. The new designs

complement several recent breakthroughs in building minuscule transistors that form the basis of all modern computing as they switch on and off billions of times a second. Earlier this year, Intel unveiled transistors just 20 nanometers wide. Today's Pentium 4 has 42 million transistors, each about 180 nanometers. For reference, a manometer is about 10,000 times narrower than a human hair. (Intel)

**

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to televisions that can receive digital signals by that date. (Broadcasting Daily)

**

HAM RADIO IN SPACE: EXPEDITION 4 CREW NOW ON THE ISS

An all ham crew is now in charge of the International Space Station and will be for the next six months.

Three astronauts and cosmonauts now running the ISS. They are Russian Commander Yuri Onufrienko, RK3DUO, along with American Flight Engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE. They make up what is called the Expedition 4 crew and all three are expected to be on the air regularly for school contacts and possible open QSO times made available to talk with hams worldwide, as time permits.

The Expedition 3 crew comprised of United States Commander Frank Culbertson, KD5OPQ, along with Russian Flight Specialists Mikhal Tyurin and Vladimir Dezhurov is now back on good old Mother Earth. They returned on Monday, December the 17th aboard the space shuttle Endeavour. (AMSAT-NA, ARISS)

**

HAM RADIO IN SPACE: EDUCATIONAL ASSISTANCE FROM VK5ZAI

Attention educators. If you are thinking about teaching the International Space Station, here is a bit of assistance.

Tony Hutchison, VK5ZAI has updated his web pages with links to help schools in obtaining educational programs associated with the I-S-S and space science in

general. Hutchison says that this should be of interest students and teachers alike especially if they are contemplating applying for a ham radio contact with the astronauts on the station.

Hutchison is the Australian ARISS Coordinator. His website in cyberspace at www.electric-web.org (VK5ZAI)

**

SPACE AND SCIENCE: CHINA ON THE BRINK

Space Daily reports that China is getting ready to launch its third unmanned spaceship. This, to pave the way for sending that nations first astronaut into space sometime next year. China is reportedly also in final testing and preparation to launch a new satellite dedicated to study ocean colors and related phenomena. (Space Dailey)

**

DX

In DX, 9V1YC reports that he and eleven other hams will be activating South Georgia and South Sandwich Islands in January and February of 2002. The operation will be strictly on the high frequency bands. Exact dates, call signs and QSL managers are not being made public until the group is actually on the air. The New Zealand registered vessel "Braveheart" of ZL9CI fame will be supporting this team for the entire 30 day trip. (RSGB)

A bit higher in frequency, Jeff Klein, K1TEO reports that December 6th was another great D-X day on the 6 meter band. Jeff who lives in Connecticut says over the VHFReflector that the band was open for a solid two hours beginning at 7:30 am local. And talk about D-X. On his very first C-Q he landed HB9QQ who was operating portable HB0. Even better, Jeff says that the fifth caller was 4X1RF. (VHF Reflector)

Over in Great Britain hams are actually D-Xing for charity. Jeramy Boot G4NJH, reports from Nottingham in the U-K.

--

Every year in September, the British Wireless Fund for the Blind -- a registered charity - organises a fund-raising event in which amateur radio clubs and individuals are sponsored for the number and distance of the contacts that they make. As of the 11th of December, the British Wireless for the Blind Fund reported that 'Transmission 2001' had raised £6681.48, with more coming in every day. They say that they hope the final total will reach £7000. The charity offers prizes to the club and individual raising the greatest amounts.

This year the Cray Valley Radio Society operating as GB2FB and taking part for the first time, won the prizes for the club raising the most money and for making the most contacts. Robert Guscott, M5GUS, operating as GB0WB, won the prize for the leading individual.

Jeramy Boot, G4NJH.

--

The bottom line. This is another way that hams can not only enjoy their hobby, but can help others at the same time. (G4NJH)

**

THAT FINAL ITEM: A HAM RADIO CHRISTMAS STORY

And finally this week, the story that we wait all year to tell you. Its the ongoing story of hams who care about hospitalized children and what they do to bring a bit of holiday cheer to those kids who cannot make it to the mall to spend a few moments with old Saint Nick. Here’s Amateur Radio Newsline’s Joe Moell, K0OV:

--

As most hams know, propagation is very good this time of year. It's so good that it's easy to make contact with the North Pole. Many clubs around the country are taking advantage of these propagation conditions to set up QSOs with a very special North Pole station. They're making these contacts from hospitals and rehabilitation centers, and they sound like this:

--
Santa and Kids Audio Here
--

That's what the North Pole Network sounds like in southern California, where it's celebrating its 25th anniversary at Childrens Hospital of Orange County. In the past few days, I've heard from other clubs in the North Pole Network, including the AkSarBen ARC in Omaha and the Southwest Missouri ARC in Springfield. And YOUR club could bring holiday joy to hospital patients. There's a how-to article on the subject, with a dozen suggestions for your best North Pole Network ever, currently running on ARRL's Web site. That's arrl.org, of course. And there's even more about North Pole Network in southern California, plus lots of photos showing a quarter century of holiday fun, at the Hospital Disaster Support Communications System Web site, www.hdscs.org. Check it out, and start planning for your own North Pole Network joy.

--

Just got my ass kicked by Macys Security this afternoon while I out Xmas shopping for the family. They were following a shoplifter thru out their store and waiting for her to leave. Just as she was about to exit the store I walked by her with my scanner turned up all the way and so she could hear them talking about him. It was at that point that one of their security people came over and ripped the scanner out off my hand. He then proceeded to smash my scanner on the floor and dragged me off to their security office in handcuffs. They let me go after a couple hours of questioning and told me that I was banned from the store for life.

Do I have a case to sue for damages? I just want my scanner replaced.

I think you do since you where not involved with the shoplifter. the problem is that you will probably will have to go to small claims court and that means extra money to spend. ONce you where ID as not involved they should have apologize and replace what they broke, maybe just compensate you.

I will do it just for the principle. Thye have no right in breaking property without replacing it. Police does if they break, why don't they?

Next time get a $4.00 one ear earphone at Radio Shack and that will prevent that situation again.

Good luck!

Ed

The same thing happened to me when a little boy tried to steal a Big Mac and Grimace cookies from McDonalds yesterday. I was in the parking lot monitoring the hot cashiers that work there when I heard it. The guy who changes how many burgers were sold worldwide on the McDs sign hit me in the mouth when I tried to catch the little bastard :>~ He busted my Aor 8200.

Obviously the security guard wasn't as familiar with you as we are on these NGs. Had he been, he'd have shot you and gotten the reward, a medal, and the keys to the city. Speaking of awards, have you ever considered trying out for the Darwin Awards?

Are scanners banned now? No.
In airports and sensitive areas yes, but not just general public.

Lucky you didn't get arrested. My sister worked at Blooming dales and in their orientation they told her that there were many instances where a person stopped for shoplifting wad a gun. One scenario they very specifically point out was when the found a guy with a MAC-10 submachine gun.
Don't kid yourself. You were the idiot in this situation.

You asshole.....You should be happy you were not arrested as an accomplice to the shoplifter. You got off easy as it is. If you try to pursue this, Macy's will probably go ahead and charge you anyway.You can buy a bunch of good scanners on what you will end up spending on some slime-ball lawyer.Let it go and find a better way to spend your time.

Right, do this instead...

Over a period of time, "shoplift" enough items to cover the value of your scanner, and a bit more for pain & suffering, and your time to recoup the damages. You are in no way stealing, as you are only getting back what is coming to you.

It is sad that this is the way we have to get justice, but the court system will never help those that can't afford the time and money, and you will always be out money, even in the 1% chance they would find in your favor. You would be the one the law should find in favor of, but the court system does not work that way, they ALWAYS find in favor of the higher paid lawyer, and Macy's lawyer will surely cost more than yours, and if you don't get one, the side with a lawyer ALWAYS prevails over a side with no lawyer.

Everytime a store overcharges (STEALS) from me and I find out when I am home, rather than the hassle of going all the way back wasting my time and gas only to get back what they took from me and NOT the cost of the gas and time, I wait till next time and be sure to help myself to enough goods to cover that cost and a bit more for my trouble.

Actually you probably have a criminal case against the securit guards
for Grand Theft and damage to property. For starters, I'd suggest
going to the police and filing a formal complaint against the store
and security officier.

There is a generalized constitutional prohibition against seizure,
especially in the absence of a warrant or other type of court order
uless possession of the device was illegal. Even if the security
detail was police, as long as the use of scanner is not illegal, or
presents a danger to life and limb, what you have is an illegal
seizure. If they weren't police or officers of the court, it is called
theft.

You almost certainly have a civil claim against the store for both the
value of the goods, emotional distress etc. I'd bet that if your
story is true, you will have no trouble finding a lawyer who will
take the matter on a contingent fee. If the store has any brains,
they will buy you off in a hurry.

Reflect upon the sacrifices that people like Ensign Mackey make for our way
of life.
The last that I heard was that he was doing DFinding work on radio
transmissions near Tora, Tora Bora caves.
Cue

Freedom Doesn't Come Without A Price

FREEDOM IS NOT FREE
by MAJOR KELLY STRONG

I watched the flag pass by one day, it fluttered in the breeze,
A young man in uniform saluted it, and then he stood at ease.
I looked at him in uniform - so young, so tall, so proud,
With hair cut so square and eyes alert, he'd stand out in the crowd.
I thought how many men like him had fallen through the years?
How many died on foreign soil?
How many mother's tears?
How many pilot's planes shot down?
How many died at sea?
How many foxholes were soldiers' graves?
No, freedom is not free.

I heard the sound of taps one night, when everything was still.
I listened to the bugler play and felt a sudden chill.
I wondered just how many times that taps had meant "Amen",
When a flag had draped a coffin of a brother or a friend.
I thought of all the children, of mothers and wives.
Of fathers, sons and husbands, with interrupted lives.
I thought about a graveyard at the bottom of the sea,
Of unmarked graves in Arlington.
No, freedom is not free.

First things first, they should never smash anything, I don't think they could ban you from the store, unless its a "NO ASSHOLE ZONE" then you are surely banned!

If I was working in security I would charge you as an accomplice!

What the hell were you thinking??

## 3952. Wireless 900mhz baby moniters

Newsgroup: rec.radio.scanner
Date: 2001-12-23 21:32:32 UTC
From: Gambino_Life@yahoo.com
Message-ID: <546f89f3.0112231332.33df931c@posting.google.com>
Source record: 55202

My neighbor has one that I listen to in the 900's. Iam assuming it is
the type they sell at Best Buy which also has a moniter.
My question is just for the fun of finding out is there a way to
tune a tv uhf to recieve his wiress moniter? I thought I had read
somewhere you could tune in these wireless things.
Just think it would be a cool test to play with.

TIA for any comments.

Has anyone successfully used Uniden's Smartscanner software with the BC245XLT? I tried it last night, downloaded their connection software but the scanner could never seem to communicate with my modem. I'm running Windows 2000 so I'm wondering if maybe it's just not compatible with this OS.

Are there any other alternatives to this program if this doesn't work (other than just manually entering in all the frequencies)?

Thanks,
Karl

Well perhaps we are into semantics here. I do so enjoy his intriguing
messages, but even more enjoy the ones that get so indignant when they
believe it.

This was a pretty good one, but nearly as good as the time he was
playing his scanner loud near the drug bust and the cops arrested him
and confiscated his scanner, etc etc.

I've started a project that might be of use to those interested in both Civil and Military Aircraft Monitors. On the http://www.MilAirComms.com website I've started a clickable map. If you click on your area you will see a complete list of ARTCC (Center) freqs for both Civil (VHF) and Military (UHF) planes in your area.

This is a great way for you to hear your first Military Aircraft on UHF.

George

That's nothing. Recently at the local mall, overheard a
cellphone conversation on the scanner, about stuff being dropped
into a trash can nearby. Big surprise when I bumped into the
same guy using his cellphone.
On hearing the feedback from my scanner, he immediately
pulled out a gun and popped one right through my forehead.
Fortunately, back at the lab they managed to upload the
remainder of my brain's logic into a mainframe with internet
access. So it wasn't all bad news. I miss that scanner though.
Do you think I can sue, or what?

next time put a red blinking cop light on your head, interface the audio
from your scanner to the store's loud speaker so as everyone can hear it.
better luck next time!

I'm on my 4th Dodge van....2 B150's, a B-250, and now a B-350 (Maxi).

the first three had 318's, Carter BBD 2 barrls and were fine for their application (200 k, 265 k and 240 k respectively), but the B-350 is used to haul a 16-ft car trailer that is most often loaded to the top of the side rails with transmissions, or somebody's 4WD pick-up I'm hauling in to rebuild its transmission, generally about 5000 pounds or so if you count the half-acre of mud hanging under it.

I doubt the 318 would have the ass to do the job, the 360 just purrs along (but at only about 9 mpg if you let the secondaries on the TQ open very often).

Bought prior to Bill Cheeks passing.

I have one complete kit unassembled with instructions.

Also have the same unassembled data squelch kit.

Will also include a VADER board and software.

Scanners are gone and so is my free time.

$120 shipped.

Too high?

Make me an offer cash or trade.

These kits are complete and new.

Thanks

Derick

Hi Bob- I think you misunderstood me. I meant barely broken in. Or barely even used. Like a Cadillac. The scanner is like new. No flaws whatsoever. I am selling it because I just received a nice handheld unit for my birthday and that serves my purpose. If you want to call I live in Omaha. 402-572-7656. Leave a message andf I will call you back. Usually I am home. thanks, Bruce Kaufman btw- for a little money you would be better off with the 780. I owned a 89xlt at one time. Nice scanner but this is improved greatly.

Actually- I noticed the place that is selling the 895xlt adds $20 shipping.
You could buy from www.national-electronics.com for a few dollars cheaper
and have it in Nebraska in a business day. They are out of Kansas City
area. Good reputation.

Did you check the connections for the battery? If the radio isn't getting
the 9volts from the battery because the connection is dirty or corroded
then the radio will continue to think you need to replace it.

Does anyone know of any frequencies or stations out there with pseudo-Santa type transmissions, updates, etc? Just thinking that it might be a good listen for the kids tonight.

what? no more Rat Shack bashing? :)... i wanted to put a 440 in my Dodge RAMCharger (truck)... only one problem... the 318 in it refuses to die.

> I'm running one in a 66 ragtop,...can't roll-bar it,..or tub it.

awesome! my truck burns some gas too... i somehow doubt the 440 will get much worse mileage than now... well, as long as i can keep my foot off the floor.

> 318's / 360's .....when you want the very best (there, that oughta
> liven things up)

the 360 can put out some serious torque if set up right... hmm, maybe i should replace the 318 with a 400-cube 360 stroker.

> Yup,small blocks have their place too..I like the throaty(sp),rumble and
> low end torque of the big block..(you forgot the 340's)<eg>.

how about a 440 with a paxton centrifugal supercharger :).

> Put either one in that uni-body(don't 'twisty' it).

gee i'm glad my truck has a ladder frame :).

> Buddy of mine in HS had a
> 340 Demon, man that puppy
> go do a burnout a mile long.

the 340 is an excellent motor!

> I'm on my 4th Dodge van....2 B150's, a B-250, and now a B-350 (Maxi).
> the first three had 318's, Carter BBD 2 barrls and were fine for their
> application (200 k, 265 k and 240 k respectively)

the 318 is a very reliable motor, that is for sure. i replaced my 2 bbl carb with an edelbrock 600 cfm 4 bbl, also put in edelbrock cam, manifold, and 6" high K&N circular air cleaner. there was this young guy recently in a mustang next to me at a light who tried to 'race' me... he found out the hard way that he can't shift worth a damn lol... his gf was less than thrilled. i don't speed so seconds later he went wizzing by but by then the damage was done... beat by a 4500 lb truck... hehe :D

> My 69 Swinger with a 340 eats 383's in big tub's :-) Sparks W4EAS

> Thanks for the reply,it's fun to see Mopar fans are still around!

hehe... we're everywhere!

Merry Christmas and Happy New Year :D
phil :)

As I recall, mainframes sit directly on the floor, with no supporting
struts or anything.

So you can't sue - you don't have a leg to stand on.

No there is no standard in the US for VHF offsets. You need to look at
databases to find out what frequency is used for the input to a VHF
repeater.

Peronally I would not buy anything across the border. Sure most people are honest. But what are you going to do if they are not? Look at Ebay user "worldphoneco" on Ebay and check that scam artist out. May have made $100,0000 on people. What can one do if they get scammed from a person in a different country legal wise?

Is there such a database on the Intenet, or what? I'm trying to
determine
the input for 154.680, which is a well used Florida Highway Patrol
freq.

Thanks.

Lonnie

Well, based on your version of the story, there is probably some liability issues on Macy's part. However, being a "responsible scanner owner" is another issue here. Maturity (along with discretion) can help you enjoy listening to conversations and stay out of trouble. In my opinion, stay out of the way of anyone (private business or otherwise) who is conducting business using radio transmisions. Just pretend your knowledge of what is going on around you is limited to what you see, not hear.

I know some newsgroup readers may be bored by this thread, but many, many people have been victimized by David Monroe, me included. It is worth it to remember this guy's name, so you are not next. Through some research last February, I learned of some past investigations started by some of the other victims of this thief. Det. Mahoney of the Ontario Provincial police wrote back with the letter below. I gave Munroe a new BC 235, and got stiffed. In fact, I ws trading for a Pro 2026.

George,
I'm sorry to hear you have been added to the victim list.
Unfortunately I am no longer assigned to that particular section. The only way I think we can stop this guy is if a victim is willing to attend Peterborough for court, at their own expense. So far no one has. If you would like him spoken to you will have to contact a Detective with the Peterborough County Crime Unit at 1 (705) 742-0401 Ext 4143. Sorry I can't be of more help.

Good Luck,

Scott Mahoney

About $8 and their price on 780 is $339 I believe. Not all websites list
their shipping. Only the ones that rape you on bogus shipping charges do.

Correction I forgot we are talking 895xlt instead of 780. Their price is
about $199 including shipping. $9 shipping.

## 4014. Anyone have any qualms about using Fedex?

Newsgroup: rec.radio.scanner

It must be e or these shipping couriers are getting worse. I had a scanner shipped to me via UPS 2 DAY and was scheduled for delivery on Wed. and I received it the following Monday after it went 500 miles to far. Box was clearly marked. Priority Mail always takes longer than it is supposed to. I also sent a letter Express Mail and it didn't get there on time. Question is does someone regularly Fedex and are you extremely satified?

I make my living selling the internet. I send about 100 packages per day, most now are going via Priority Mail

at it appears to be the "more" reliable of any of the choices. As you
can see I said "more" reliable and not "most" reliable as the word
"most" implys being reliable!

Ever since 9/11 ALL shipping couriers have gone down hill and I don't
see them rebounding anytime soon. Off forms of UPS has take much
longer than normal. Forget FedEx, in the last month I've sent 23
packages via NextDay FedEx, only 3 actally arrived the next day. 7 of
the 23 took 5 or more days to arrive!

Priority mail as been running the best, after day is about 100
shippments, out of 100 2 will get lost, 60 will arrive in 3 days or less
and the rest will arrive in 6 days or less. A word of warning
however, a lot of people are under the impression that Priority Mail is
Guaranteed to be delievered in 3 days or less. This is NOT correct,
USPS does not in anyway Guarantee the deliever time of Priority Mail.

We use FedEx at work. Typically half a dozen packages a day from our
office (a couple of dozen people). Not a real big volume, but we've
been using them almost from their first days. We'll use them to ship
instrumentation to remote test sites, where the stuff just *has* to
arrive.

I will never mess with anyone but FedEx. Service has been as close to
100% reliable as you can get. The only time they failed was when I
was to be a beta tester for a computer game, and the game arrived
almost a week late. Big snowstorm, FedEx couldn't get to my house til
the street was plowed.

Their tracking system is great - you can go to their web site and get
a blow-by-blow. Even on international shipments. Try that some time
with USPS's Express Mail.

For non-express packages, the post office is actually surprisingly
reliable. Their premium services are just not worth it.

It is the same or close enough. Looks in poor taste to advertise at a
cheaper price and then gouge on shipping. I was pointing
National-Electronics because he said he lived in Ne. and he could get it the
next business day as it was closer. Got a problem with that?

Oh really? In case you missed it you have to enter the zip code and they
give you the shipping cost at the shopping cart so I guess that would make
them reputable, huh? I bought 15 scanners from them over years and years.
Never a problem. I know alot of people use them. Who are you? The
competition? Yada, yada, yada.

You might get that the money for the scanner but I wouldn't doubt it if they charge you for assisting a criminal. Good job for putting your self in the spotlite and loosing your scanner.

I had a repaired scanner shipped to me from Ft. Worth on Dec 05 and due to
arrive on the 8th,
It hasn't gotten here yet.

There were conflicting accounts of when it was supposed to have been delivered,
They have finally settled on a time on the night of the 8th,
but the driver, in a voice mail follow-up to my query, said he had delivered it
on the 9th.

Fedex states that they don't do residential deliveries on Sundays (Dec 09),

Anybody know what the recommended procedure is to sue an incorporated business
operating in Texas,
by someone living in California?

However much total money you have to spend to get an item to your toy box is
the cost,
regardless how they juggle the various charges.

I always go by bottom line and try not to get too distracted by "listed" price
alone.

# 4024. Selling: PRO-2006 SCANNER 400 Channel

I have a Pro-2006 for sale,
It is in good to very good cosmetic condition, backlight is very bright
one small problem though is I cant get the battery light to stop
blinking from the display background?..this doesn't effect the function
of the scanner.Otherwise the scanner fuctions perfectly. I have tried
replaceing the battery but does not solve the problem?.

I am open to reasonable offers or if anyone has an idea of a fix that
would be great?
Please e-mail me directly please at rusty@dccnet.com
Thanks-Russ remove nospam from e-mail

# 4030. Re: discriminator output

Newsgroup: rec.radio.scanner
Date: 2001-12-25 14:56:48 UTC
From: Tom Needham <tneedham@acd.net>
Message-ID: <Yv0W7.53$jV.34731@newsfeed.slurp.net>
Source record: 55180

Please humor me....
what exactly is a discriminator output?
I downloaded "MDTMON" which snags an input into your sound card
and decodes it.
I assumed (possibly wrongly) that it should be connected to the Rec Out of
the scanner.

If it should be connected to a discriminator output:
Does my scanner have one? (Icom IC-R7100)
If not, is it possible to add?

Thanx!

Tom

I am selling my Icom R-10. It is 2 months old or new as I like to say it.

It comes with the charger, manual, antenna and computer hook up.

This radio is in excellent operation and cosmetic condition. There isn't a darn thing wrong with it, I just bit off more than I could afford when I bought it.

Shipped $275.

First comes get it. I will ship when I receive your money order.

contact Jim at jmcr@nauticom.net for any particulars and questions.

# 4034. Don't forget to scan the FRS (and GMRS) frequencies today!

Lots of kiddies received new walkie-talkies in their Christmas stockings this morning. Hearing several channels active in my neighborhood. Mostly parents inside and kids walking around outside, "testing" their new radios.

Might want to scan the GMRS simplex channels as well. Hearing some activity there also. All of it appears to be unlicensed. Gotta love those blister-pack Audiovoxxes from K-Mart!

You may want to scan the MURS frequencies also:

151.8200
151.8800
151.9400
154.5700
164.6000

# 4044. LA Area Towing Company on 35.180 MHz

Newsgroup: rec.radio.scanner
Date: 2001-12-25 22:46:32 UTC
From: Ron Wilbanks <NYC6011@ameritech.net>
Message-ID: <3C2901EF.E82097B5@ameritech.net>
Source record: 55194
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have been listening to a AAA towing company on 35.180 MHz, from the south LA area. Their PL tone is 162.2. I checked the FCC Database and found no listing for them. They are often on the I-5 Freeway, I-605 Freeway, and local streets like Pioneer, Firestone, and Rosecrans. Any idea who this towing company is? They come in loud and clear here in southeastern Michigan.

Happy Holidays

Source record: 55098

It is an often misused term. What is often referred to as the discriminator output ( most modern scanners do not use a discriminator circuit but another type) is really the output of the detector stage of an FM rig before any audio filtering is applied. It is also referred to as baseband audio. This gives the widest range of frequencies and least distortion so the computer or other devices can decode the digital signals or the subaudio signaling tones. If you connect to the speaker then many decoder program modes will not work as the audio frequencies are not there or have been distorted.

# 4056. Semi Duplex ARTCC Question

Newsgroup: rec.radio.scanner
Date: 2001-12-26 03:43:50 UTC
From: courir26@yahoo.com
Message-ID: <a0dd5fc9.0112251943.1623fa44@posting.google.com>
Source record: 55106

I have a question about Houston Center ARTCC comms.

I listen to 119.725 for planes talking to Houston Center, but around Lacomb, LA, I can also hear the controller talking back to the same planes on 126.875. No planes are ever heard on 126.875. I am using a Icom R-7000 so I'm confident that the freqs are right.

Obviously, there is a site somewhere that is sending the controller's voice up on 119.725 (but I can't hear it from home). But what is this 126.875 freq for? Who is hearing this? Certainly not the planes as they are on 119.725.

In my company, we use FEDEX for all of our shipping. Easier
than USPS, and more reliable than UPS.

We send about 12 packages out a day, and I cannot remember the
last time we had a problem.

>I see RS has the PRO93 on sale now that the last sale is over (the 2052
>and the 92 I believe?). Any opinions on this rig? I'm not really in the
>market for a new hand held, just curious!

It looks to be a very nice unit... some people have quibbled over some
of the following problems... also, no leather case yet.

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=499
usability

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=563
quirks

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=525
alpha tags

http://www.strongsignals.net/access/boards/viewpost.cgi?board=trunking&num=333
adapt-a-plug

And a comparison to the Pro 92 makes me want to wait for the "Pro-95":

http://www.trunkedradio.net/cgi-bin/ultimatebb.cgi?ubb=get_topic&f=23&t=000032
I am not so certain about the Pro 93. About the only thing that I did
like was the fact that it runs on 4 batteries instead of 6. You have
200 less channels than the Pro 92, less trunking capability (LTR), no
CTCSS/DCS search and display as the Pro 92, no aviation, and no
supporting programing software. Also, the Pro 93 operates off of
firmware version 1.0 (Not Good)if ths is the same firmware used in the
initial pro 92. And the price is the same as the PRO 92. So why pay
the same for less?

## 4081. Is the PRO-93 a total flop of a scanner?

Message-ID: <22995-3C2A2A28-693@storefull-116.iap.bryant.webtv.net>
Source record: 55133

Tom:

One ARTCC sector, especially the low altitude sectors, consist of more than one frequency. Also, depending on the time of day and workload level, one controller is often times working several sectors, including the combining of low & high altitude sectors.

The same type of thing also applies at airport control towers at major airports, especially in the middle of the night. It's not unusual for Tower, Ground & Clearance Delivery frequencies to all be combined and handled by one controller while another controller handles all of the Approach & Departure Control combined frequencies.

There is no general offset for VHF. UHF it's 5 MHz on 450 to 470 and 3 MHz on the UHF-T bands. VHF, no such luck.

Thanks for your thoughts on this. When you write "newer versions",
do you mean new model numbers such as 4???, or the same Gigaset 2420
and 2420 models with no indication when such improvements were made?
It was Sept. 2001 when I tried out the 2420, but for me it still
didn't have much range.

I never been happier over a scanner purchase in my life. This unit is
flawless compared to other units including the 92A and the 780XLT.
If I had to buy a 92A again I wouldn't do it.

>I am not so certain about the Pro 93. About the only thing that I did
>like was the fact that it runs on 4 batteries instead of 6.

Of course. Advantage: 93

>You have 200 less channels than the Pro 92

Not needed in most cases. If almost everything is trunked then you
don't need many channels at all. Besides the scan rate of the 92 is so
damn slow you would never put that many in it anyway. Advantage: 93

>Less trunking capability (LTR),

Who really needs it anyway? I bet 98% with a Pro92 doesn't even use
LTR. Actually, it has more trunking capability. It has great 800
sensitivy, no missing talkgroup IDs in open mode, no losing the
control channel etc.. It works much better than the 92A on Motorolla
systems. Advantage: 93

>no >CTCSS/DCS search and display as the Pro 92"

That kind of sucks but saves money. The 93 adds CB and 200 Ham band
which I'd rather have. CTCSS/DCS are only needed on Uniden radios or
if you use an external antenna. Advantage: 93

>no aviation,

My 93 has the air band in the search options and searches through them
faster. ??? Advantage: 93

>and no supporting programing software.

Once it's programmed it's never needed. I'd rather program it by hand
than to waste money of software. Advantage: none

>Aso, the Pro 93 operates off of
>firmware version 1.0 (Not Good)if ths is the same firmware used in the
>initial pro 92.

It's the best operating trunk radio on the market. No complaints at
all.

>And the price is the same as the PRO 92. So why pay
>the same for less?

Correct. That's why he needs to purchase the 93. Don't pay the same
for less. My Pro 92A is now third string in my handheld department.
1st: 93
2nd: 245 XLT
3rd: 92A

Message-ID: <ae58b39c.0112261519.731304d9@posting.google.com>
Source record: 55142

Hi,

Looking for a few good links to some webpages related to scanning Jacksonville, FL. If you know of any, please let me know if you get a chance. I've found a measily 3 sites so far using all the search engines I know of.

Life Story: I began scanning in 1993 and had to give it up in 1996 (longer life story) just when I was getting the hang of it. But it was fun and I miss eavesdropping, etc. I decided to give it another try and be a geek extraordinaire. I have a BC200XLT (BC200 doesn't stand for Bearcat 200 for my model anymore, now it's backwards and stands for 200 B.C.). So that gives you an idea of how cool I am now. Next, I think I'm going to upgrade to a push-button phone.

Anyway, all help will be greatly appreciated.

Live long and prosper. (insert Vulcan hand signal here). Thanks.

# 4092. PRO-51 Problem - Resets

Source record: 55143

Hi all,

I have a PRO-51 that seems to have developed a bit of a problem that I can't figure out. Every so often I'll be listening to the rig and it will shut itself off. I am unable to turn it back on for several seconds (even removing/replacing the batteries doesn't appear to help), and when I do the entire rig is cleared of programmed channels. Everything is back to zero, bands 1-0 (all of them) are enabled, and the rig is in scan mode - just like when you first take it out of the box.

Has anyone else seen this with the PRO-51 or another RS scanner? Anyone have any tips on what may be causing this? How about a static discharge through the antenna? Maybe?

thanks in advance!

All-righty then. Thanks for the moron comment. And speaking of morons lets examine your post then. You simply can not compare a 3000 pound nuclear bomb with a convential bomb; these are two totally different reactions. With a nuclear bomb, the important thing is the amount of nuclear material and how big the reaction is.

With a conventional bomb, it is an explosion (as opposed to a nuclear reaction). The heavier it is, the more explosive it contains....the more explosive it contains, the more damage it does.

For instance, take a little bit of C-4 and place it next to a downed tree. Set it off and yes, it does some damage. Now take a similar tree and place a couple sticks of C-4 next to it. Blow it up and you'll see, as expected, it does much more damage. Same concept. And FWIW, yes, I have done this a few times (I've been in the military for over 15 years now).

Actually the weapon is quite old, it was used initially in Viet Nam to
create instant Helicopter pads. 30,000 pounds of Air Fuel Explosive
on a pallet, pushed out the back of a C130 with a parachute. While the
weapon is often called a Daisy Cutter, in reality that name refers to
the fuse. It creates a huge shockwave, which levels everything around,
and blows out eardrums.....

So you are saying that besides nuclear weaponry, there is exactly one other type of explosive in use in bombs in the whole world, that it is called C-4, and that its explosive power is measured by how heavy it is.

More important to today's commercial economy is,
what brand were the shoes, and who is signed up to endorse them.

Source record: 55075

It was released at essentially the same time as the original dc-to-daylight R1 handheld as a 'dash-mountable mobile' dc-to-daylight scanner [a little earlier if I remember, as the R1 had some additional compliance issues before it was allowed in the US market]. The buzz at the time was that the R1 and R100 were similar in function and performance. The early R100's, like the early R1's, were built and sold before cell blocking laws. Unblocked, it's pretty old. I can tell, because the brain cells are complaining about being disturbed....

>and blows out eardrums.....

A previous poster talked about a 30,000lb bomb. The BLU-82 weighs in at
about 15,000 and has approx 12,000 of explosives.

Contrary to some published reports, the BLU-82 is not a "fuel air
explosive," a type of weapon that disperses an aerosol cloud of fuel and
ignites a blast that can cause overpressure of 4,000 pounds per square inch.
Fuel air munitions are made in sizes from 500 to 2,000 pounds.

"A fuel air munition basically puts out an aerosol fuel that then is ignited, burning the oxygen in the atmosphere, whereas a BLU-82 is basically just a big barrel of blasting slurry," explained John Pike, director of the defense policy group GlobalSecurity.org.

The above was found at:
http://www.globalsecurity.org/org/news/2001/011107-attack01.htm

A fuel air explosive would not create the shock wave associated with the BLU-82.

Found in alt.radio.pirate:

A radio pirate in the Barnes Road area of St. John's, Newfoundland, Canada has had his equipment confiscated by Industry Canada. The pirate, who, they describe as 'not too bright' and dressed in woman's clothing was awakened from his sleep by a squad of agents, who searched the house and seized thousands of dollars of radio transmitting equipment. The pirate was caught when while under the influence of alcohol, mistakenly broadcast his address on the air, while soliciting free beer from listeners. Charges are pending.

Wonder if he also operated on 14.313 and fancied an "erotic exotic relationship" with a certain ham in Vermont? ; )

> Nukes are measured in Kilotons - I

More exactly, nuclear weapons' explosive power is measure in Kilotons,
or Megatons of conventional explosives. e.g. a 10 kiloton tactial nuclear
shell has the explosive power of 10 thousand tons of conventional
explosives, but may actually weigh only a hundred pounds itself.

The previous poster was probably talking about a recent news article that reported a local weapons company was in talks with the government on purchasing a new in-development 30,000 pound bomb, (twice the size of the 15,000 lb. bombs used in Afganistan). I don't remember the manufacturer... it may have been Lockheed-Marietta.... not sure. Was in the Drudge report withing the past week. (Dec. 18 - 25).

Ok, my info was off a bit, it's being proposed, not tested.

"Northrop Grumman has briefed Air Force officials on a concept to field a 30,000-pound guided weapon, called 'Big BLU,' that could be used as a penetrator to destroy hardened targets that may house enemy leaders or weapons of mass destruction, DEFENSE DAILY reported on Friday."

If he's saying that, why listen? :-)

I'm not into bombs, but I've had a little involvement with blast
hazards from other things, like exploding fuel tanks or burst pipes.
It's pretty common to rate the energy of those as an equivalent weight
of TNT. Nukes are rated as kilotons or meagtons of TNT.

So when they talk of a 2000 (or 30,000 pound) bomb, aren't they giving
the equivalent weight or TNT?

IIRC, the classic WW II "blockbuster" was 2000 pounds (probably actual
TNT?) and was called a blockbuster because it would take out an entire
city block. More than enough for an emotional experience!

So back to the original question. (!) What good does it do to talk in terms like "2000 pound bomb" when the bomb could carry any kind of explosive under the sun.

Ok, we know that it would be at least as emotionally desturbing as a 2000 pound rock. But that tells us nothing about the explosiveness of the bomb, and the explosiveness of the bomb is what this guy is bragging about, using "2000 pounds" as the arbitrary measure.

Source record: 55058

Hello,

I have a bearcat SC150 and was wondering if there is anyway to modify it for use in the 200MHz range? It skips everything from 175MHz to 405MHz. That range is used for some hunting tracking equipment for hunting dogs and I would like to use a handheld scanner instead of the bulky tracking reciever. If the SC150 cant be modified are there any scanners that will allow the 200MHz range to be heard?

Thanks,
Chadd

Yikes, another dope outside of the military thinking that they know all military problems and stupidity from the outside looking in.

I remember this one girl, downtown villagey type, I told her that I had to use the military phonetic alphabet when using the radio in the Army. I told her it was Alpha Bravo Charlie Delta... She cut me off and said " that's so stupid, why don't they just use the tried and true Alpha, beta, theta. Are the military so dumb that they have to dumb down the Greek alphabet?"
The explanation why was complicated but the girl needed to realize that at most times her personal experience has nothing to do with military experience.

Same with pseudo internet intellects. Look at the key words "2000 lb. bomb" and "Navy Officer."
The Navy has a VERY specific 2000 lb bomb in it's inventory. It's explosive content is an absolute written since the Vietnam war. The actual explosive may have changed but they all use the same type of explosive. Since he is a Navy officer we can deduce that that is the bomb he is talking about. Not a Nuke, not gunpowder, a 2000 lb bomb from the navy's inventory.

The question then becomes, why would you think a Navy officer would be talking about anything else? And why would this Navy officer need to tailor his comment to suite your specific knowledge or lack thereof, on the subject?

I know why, because you, from the outside and lacking any credible experience the military, like to snipe at semantics in order to look smarter than them, or even us in the newsgroup.

## 4129. BC780XLT or wait?

Newsgroup: rec.radio.scanner
Date: 2001-12-27 14:25:41 UTC
From: Pete Fanning <fanningp@matc.edu>
Message-ID: <3kbm2us9a50ubnar6676qmb9idkt2ruucr@4ax.com>
Source record: 55083

Greetings....

I'm a part-time scanner enthusiast, having owned an old RatShack base and a BC200XLT handheld for many years.

I have read and heard ALOT about the 780XLT, and from what I can tell I would love to have this!

However, I hear rumblings of a new Uniden model with digital capabilities.

Should I wait and see what Uniden does, or do any of you recommend I go out and get a 780XLT anyway?

I live about a mile away from AES in Milwaukee and haven't stopped in yet to check their prices....

Thanks...

That's a Short-Circuit, "usually" caused by a FAILED-MODIFICATION attempt!OR:

Something could be loose inside of the radio.

My advice is to take it apart, look for something conracting the RF cover, or anything, which might be loose inside of the scanner.

Some RS scanners are made by Uniden, others are made by GRE.

GRE makes the PRO-92, 93, 2067, and 2053, maybe more.

I've had my 780XLT for about a month now and love it. Does nice for trunking, but my main insterest is MilAir.

The 780XLT has EXCELLENT sensitvity in the MilAir bands, better than my PRO2035's and PRO2006.

I would buy one now if you're interested. At best it will be at least a year for the Digital board is ready and that could even slip through the cracks.

Yes, and for anyone else who is interested, the Pro-93's speaker is 36 mm (1
3/8 in.) while the 2053's is 77 mm (3 in). Also note that the Pro 93
requires an *amplified*external speaker if one wishes to add it.

Perhaps my inquiry is better in more general terms. Assuming equality of
features, which is the case here (depending on how much the "bug" bothers
you) and forgetting the speaker issue, why would one buy a desktop version
given the greater flexibility of a handheld?

Hi Tom,

You are probably listening to what, we here in Canada, call PAL's or Peripheral Station. The PAL can be a station to extend only the Center's comms or to receive the air traffic. In some cases both. You probably don't here the air traffic just because there is no traffic in the area to use the PAL.

Where I live here in Ontario Canada, we have a PAL station north of me at Peterborough. I can pickup Toronto Centre but only here aircraft on the frequency every so often. I have heard at times that Air Canada will enter the original 127.0 on their primary radio and 134.25 on their secondary radio. They will hear Toronto Centre on the PAL of 134.25 but still transmit on 127.0. Lower aircraft will listen and transmit on the PAL due to their altitude.

Hope this helps??

Dave...

# 4139. Pro-92 Newbie

Newsgroup: rec.radio.scanner
Date: 2001-12-27 17:05:12 UTC
From: Howard Johnson <hjohn57@nospam.home.net>
Message-ID: <n5lm2uou6qhbsg08kpv552p5gkga7ftft2@4ax.com>
Source record: 55091

I just received a Pro-92 for Christmas (after doing some decent searching on the newsgroups).

Our area uses the Motorola system and my scanner has the 1.00 version firmware.

My questions:

1. While listening to a call the radio shows the talkgroup ID as it should. But it also flickers other ID's from time-to-time while still listening to the same call. This is quite annoying. A call may sound like it's coming from PD dispatch but, if half way through the call you look at the radio, a city maintenance ID may be displaying at the time! We have four different dispatch offices here so it may be hard to determine which office originated the call.

Is this a function of the v1.00 firmware scanning the freqs (Low Speed Handshake) instead of listening to the data channel? Will upgrading the firmware fix this or does the radio do this on all versions of firmware.

2. I have tried everything I know to try to get the radio to "remember" to lock out the data channel. Whenever the unit is turned off then back on I have to go back in program mode and lock out the data channel. Will upgrading the firmware stop this problem?

I still have my Pro-90 TrunkTracker and I am using them both side-by-side to see the differences. Aside from the anomalies mentioned above, the Pro-92 seems to be the better radio. It also picks up more talkgroups than my Pro-90.

Has anyone upgraded the Pro-92 firmware??? Comments about pro's & con's for upgrading?

Howard

To all:

Hi!! My name is Chris Halladay. I am the owner and moderator of a scanner list called "CenCalScan". It is based at Smartgroups. It is for scanner enthusiasts that live in the San Joaquin Valley in California. This extends from Sacramento to Los Angeles. You do not have to live in this area to belong to my list, however.

I would like to invite you to subscribe to my list!! It is a very active and friendly one.

Once you are a member, you can post frequencies and breaking events or anything else that is scanner-related.

If you do not live in California, please spread the word that my list is available!!

There are two ways to subscribe. They are:

1) Go to the list's homepage at:

http://www.geocities.com/scannut93711

and scroll down until you see a box in which you can enter your email address.

2) Send a blank email to:

CenCalScan-subscribe@smartgroups.com

I hope to see you on my list!!

"Another dope...thinking they know all the military problems..."
"...pseudo internet intellects..."
"from the outside and lacking any credible experience the military".

You get in touch with your inner "Mall Security Guard", while I ask a question.

I knew a girl who asked a question too, the answer was too complicated for me to explain, but I was able to grasp that "her personal experience has nothing to do with military experience."

An award-winning "No shit, Sherlock" moment.
Glad you decided that she too, "needed" to grasp her your view of her incompetence, instead of the answer to her question.

"The Navy has a VERY specific 2000 lb bomb in it's inventory. It's explosive content is an absolute written since the Vietnam war. The actual explosive may have changed but they all use the same type of explosive."

Gee, I can't actually tell you what it is uh, I heard it came from the Viet Nam war, Coulda probably changed, i dunno.

The question then becomes, why would you think a Navy officer would be talking about anything else?

Was I talking about something else?

"And why would this Navy officer need to tailor his comment to suite your specific knowledge or lack thereof, on the subject?"

So people know what he's talking about?

" I know why, because you, from the outside and lacking any credible experience the military, like to snipe at semantics in order to look smarter than them, or even us in the newsgroup"

Yes sir! Don't ask Questions Sir! Where's the Gap Sir!
I like to snipe at semantics in order to look smarter than them.
Look smarter than what? Semantics?

You did not answer the question.
You are the weakest link! Sir!

# 4146. new bc780xlt software (free?)

Newsgroup: rec.radio.scanner
Date: 2001-12-27 18:28:51 UTC
From: Avraam <delphi657645@hotmail.com>
Message-ID: <3c2b652f$1_4@corp.newsgroups.com>
Source record: 54998

I started to make a new software for my bc780xlt.
I want to make it simple, easy to use, and only with the basic options for start, so any beginner will be able to use it.

The application is 15-25% done.
When I will think is ready for testing I will post here the link where you can download it.

What I want to know is are you willing to pay for a such application? <g>
The application will be free for use, but any time you start it will display a splash window with the message
"I steal this application from Avraam" :-)

If you guys will like the application I thinking of 2 ways to register it:
1) send 1$ bill in an envelope to my address
2) send a picture post card to my parents address (in romania)

witch one you like the best?

-avraam

hehe, you still dont realize that you are the only one that couldn't figure
it out. ; )
You gotta start thinking faster.

You prove nothing but your our inability to reason.

You prove nothing but your our inability to reason.
huh? "your our" freudian slip?

You post some link and claim that everyone else gets it but me, when no one else has had time to read it least of all me.

You don't know what I get or don't get, or why I am asking the question. I don't know why you must take us all through a tour of your military imagination.

A person who is not on the inside of the military must be humiliated for asking a question about the military.- they don't "get it". they're not "fooling anyone".

We are delighted to see how macho you are.

Hey Delayed, I think a 2000 lb bomb, is just the name of a bomb. It's not talking specifically about what type of exlposive (high-grade /low grade /whatever).

Don't let this jerk get to you. He's just another internet asshole.

Maybe we should just get back to scanning :)

It's a.sig file from a guy calling himself F-16 falcon. It's a phrase that the whole of the Navy and air force uses, right up to the joint cheifs of staff. A mantra.

I read your link. It does not address my question.

It tells me that 2000 pound bombs exist.

Are all 2000 pound bombs filled with the same explosive?

SInce there are a couple of different 2000 pound bombs on the website I assume there really are different kinds of 2000 pound bombs. Which one causes the emotional disturbance to which the Navy officer referred?

Or can you just drop any old 2000 pound bomb, and as long as it is 2000 pounds, everyone will be pissed off.

Would a 2000 pound bomb filled with explosive shoes be better than a 2000 pound bomb filled with dyno?

A pound of feathers = a pound of gold?

I think President Clinton said it well in the thread.

Thank you Bill.

See I did not insult you! just like I didn't insult you before exept for that once

# 4161. 2 EDACS in Same search bank

Newsgroup: rec.radio.scanner
Date: 2001-12-27 20:41:05 UTC
From: michael <mvp67@tampabay.rr.com>
Message-ID: <BHLW7.203151$oj3.33900564@typhoon.tampabay.rr.com>
Source record: 55013

The EDACS systems they use here have only 6 frequenices (System A) and 20 frequencies (System B). I know you have to program them in a certain order. They only have 85 id's total combined.

My question is, can I put all 26 frequencies in 1 bank in the correct order without them interfering with each other.

Im using the BC 780xlt and tring to open up some channels, seems like a waste to only use 6 channels and the use another bank for another 20 channels.

Has anyone tried this and what are the results.

Thanks
Michael

# 4162. Re: BC780XLT or wait?

AES is currently selling the 780xlt for $369.99 - a bit much. If you live there, however, it's a great place to browse through. They're also good with whom to deal, so... I visited there a few years ago to look and walked out with a $1,200 Drake R8B.

I understand. You say you can answer my question, but it's too much trouble, I'm too stupid, I just need to think harder. I get the cut n paste of where to look, but i just don't get a 12 word answer.

There have been a lot of hundreds of words on this one, but no answer.

I've articulated my question at least 6 times, but no one has even thought enough of me to throw me even 1 real answer.

It's just one of those statements that sounds impressive and people accept as fact, but no one understands. like

A truckload of food can feed a thousand people.

Er ok Officer foodbank whatevr you say, er what's in there .. crackers?

# 4165. Suggestions for a decent scanner purchase

Newsgroup: rec.radio.scanner
Date: 2001-12-27 21:15:29 UTC
From: shdw_knt@hotmail.com
Message-ID: <cadde931.0112271315.3cf34614@posting.google.com>
Source record: 55017

Hi all, I am hoping someone out the can help me.. I am looking to find out what is a good scanner to purchase for around the $150-$200 range. I used to have a BC850-XLT but some how during my recent move I have lost it. It was good for what I used it for but now I am looking to get a new one to replace it. I have only one question about the new scanners, are they possible to modify for unblocking cell and other frequencies? I have seen alot of unblocked scanners on the net from over seas that can be purchased but I really dont have the $400 - $500 to ship them in. If anyone can help please email me at Shdw_Knt@hotmail.com

Thanks alot.

I used to use a 5/8 wave CB whip to listen to the CHP in my car when I
lived in California and it worked very well. There are antennas designed
for those bands by Larson and Hustler although they are quite expensive.

HTH,

One thing to consider when looking for a scanner is what it is you actually are interested in listening to. An example would be the RS PRO-2052 being a good buy if you're looking to listen to the current military air traffic because it covers the band they use, as well as the new Uniden BC780XLT, which I believe also covers that band. Both also cover the standard bands used by the public safety agencies (most do nowadays) and both also "do" trunking. Decide what you're interested in monitoring and see what the various radios cover. The 780XLT may also offer the ability to change mode (AM or FM) which also helps in listening to the military aircraft, which the 2052 does not. The 2052 has 1,000 channels, however, while the 780 has 500. Try the Strong Signals website at

http://www.strongsignals.net

for reviews and a lotta information on scanners.

Richard, the antenna offered in another post for 42-46 Mhz would work
quite well, and a CB whip cut down somewhat would also do nicely. The
whip is cut for the 27 Mhz CB band, so cutting it down a little would tune
it for a higher frequency. Let me see if I can find some frequency
calculations
to determine the proper length to cut it to. In the meantime, perhaps
someone else has these calculations handy???

E.G. police use the county south sac ID 8272.
I found it listed as channel A3.

The air port uses the county 8368. channel A6.

If you are using a Pro-92, I would be happy to send you
a sac .spg file.

There is a lot of info on this at www.pro-92.com (the hyphen in the
site name is important). I recommend that you look at the information
on that site, browse through past messages on the topic, and post your
question there.

No trunking systems for me to listen to where I live, so I can't give
a first hand answer, but there are a lot of folks at pro-92.com who
can. Might even be someone in your neighborhood who knows your local
system.

This is a total guess, but much like the composition of the armor on an M-1 tank is classified information is it possible that no knows (or perhaps those that do can't say) the composition of the explosives?

see below for further....

Typical brain dead troll type response form an anonymous
"contributor" - and I use that latter term with serious reservations. The
fact is that the PRO-93 adherents are whistling past the graveyard in an
effort to convince themselves that they have something that is superior
to the PRO-92; when, in fact, it has serious limitations, fewer channels
and far fewer features.

I would guess (but cannot guarantee)that an upgrade of your radio to
the "A" or "B" spec firmware would help solve your problem. The
overarching deficiency of the PRO-92 is limited sensitivity, which the
firmware upgrade will not affect. If you are close enough to the
transmitter, it won't matter and an antenna upgrade (the stock one "esta
mierda") will be beneficial if your location is marginal and is a good
idea in any event.

Howard, ignore trolls like "Delayed (should be Incapable Of)
Thinking" when they raise their ugly heads. They are solely interested in
inflicting unhappiness and assuaging their own insecurities.

I was thinking of buying a Bearcat 248 CLT for the bedroom since it has a built-in alarm clock
I was wondering can you leave the radio in scan mode and still wake to the alarm tone?
I would like for someone to e-mail me if you have one. I have a couple more questions.
thanks...

The standard 2000lb Navy and Airforce bomb for the US is exported to nearly every NATO country since about 1950
http://fas.org/man/dod-101/sys/dumb/mk84.htm

The Mk-84 contains "945 lbs. H-6 or Tritonal" The whole history is on the link.

Tritonal is a U.S. military grade explosive that is considered impossible to duplicate outside of a lab. But they do make comparisons to explosives made by other countries. Semtex, for instance, is the Chzech equivalent of C4. I forget what the soviet equivalent to Tritonal is.

Good Luck. I have owned mine since they first came out. Looking all the time for any mods for it with no luck. The only thing I could find was the discr. tap which works fine. I am able to receive cell on it . But I use a GRE amp hooked to a external antenna and I live about 1\2 mile from a cell tower so I think I am just over powering the filters in the radio with the amp. I realize that it is image frqs but it works fine. I start hearing them about 868 mhz thru 925mhz.. I know its cell because I have a Pro 2030 that is cell modified also. Hope this helps.

I have a Pro-2006 for sale,
It is in good to very good cosmetic condition, backlight is very bright
one small problem though is I cant get the battery light to stop
blinking from the display background?..this doesn't effect the function
of the scanner.Otherwise the scanner fuctions perfectly. I have tried
replaceing the battery but does not solve the problem?.

I am open to reasonable offers or if anyone has an idea of a fix that
would be great?
Please e-mail me directly please at rusty@dccnet.com
Thanks-Russ remove nospam from e-mail

Geez, isn't it possible they are both good scanners? Why all the religion?
Anytime someone mentions a scanner there are a half dozen folks who need to
reationalize their own purchases by pulling down someone elses. I don't know
about others but none of my scanners is anywhere close to perfect but they are
all pretty well suited to the need I bought them for. How much you wanna bet
they would not be suited to some other users needs? That doesn't mean they
are better or worse.

I hope Howard can figure out and solve what is going on, he seems to be pretty
happy with his scanner otherwise.

O

Message-ID: <u2npprtgm0uo4e@corp.supernews.com>
Source record: 55046

I found some math indicating that a quarter-wave of 27Mhz (CB) equals
110.xxx inches (sounds right - full size CB steel CB whip is 108 inches) .

To calculate it, divide 2992 by the frequency in Mhz; 2992/ 27 = 110.81,
so 2992/ 39 = 76.717 inches & 2992/ 46 = 65.04 inches. Cut it
somewhere between 65 & 76 inches and it oughta work pretty well.
Halfway between 65 & 76 is 70.5 inches to center it.

>given the greater flexibility of a handheld?

That's not a question anybody can answer for someone else. It depends
entirely on where you're going to use the scanner. If you've got a
fixed listening post, a desktop scanner will sit nicely on a shelf (or
even a desk top) without any bracket or stand. If you're going to
move around, a desktop unit will need a looooong extension cord.

Thank you everyone for reply. I'm gonna try this one to start, 1/2 inch at
a time.
Thank you Den6N.

True dat. I bought a pro-94 but who needs a thousand channels?? I love my pro-93. It works for MY needs. It'll never, ever work for what YOU need it for.

"it has serious limitations" how serious? Life threatening earth shattering limitations? Use better words.

Could someone tell me all the mods I can make on this scanner? I'm looking for military, and any freqs between 512-806.Why are these freq's not on scanners?, and miss out on alot of stuff to the dispatcher. Plus maybe a mod to speed up the scanning. I just bought a RS antenna (it is last year's or older) #20-044, it comes with 50ft of rg-6 cable.I plan to have this on the roof. Can I expect a big difference in what I can pick up? I read somewhere in this group that such a system would "overwhelm" a portable like mine. I live in a rural area about 30 miles from Rochester NY Also, do they make any scanners that cover all freqs, say, from 30-1300 mghz? Thanks, Steve

Ok I'll accept that. I admit now that there is an answer and that someone can tell me what it is.
I see now that the phrase "2000 pound bomb" (if I have to say that phrase again) is a particular measurement of a particular class of bomb in a standardized bomb measurement system.

Bombs are generally classified according to the ratio of explosive material to total weight.
The 2000 lb bomb is a member of the General Purpose [GP] class of bombs
Approximately 50-percent of the General Purpose [GP] bomb's weight is explosive materials.
The 50-percent explosive material is 945 lbs. of H-6 or Tritonal.

The MK84 is a 2000 lb, General Purpose [GP] class of bomb containing 945 lbs. of explosive called Tritonal.

When Navy Officers or an Army Men refer to a 2000 lb bomb, they are probably talking about the MK84 or equivalent

(I didn't know they bomb the ocean but that's beside the point)

* The term 2KB doesn't indicate any particular bomb property except within the context of the bomb classification system used in the military.
* The Navy Officer must be speaking to an audience which is unfamiliar with the bomb classification system, because
* People who are familiar with this bomb classification system have no need for a description of the 2KB .
* The term 2KB has no meaning for the audience because it is unfamiliar with the classification system.
* To understand the statement of the Navy Officer, the audience must ask about the classification system.

* To the Navy Officers intended audience, the Navy Officer's statement was as about as meaningful as pulling a goat's butt through a number 47 socket.

It sounds impressive but what does it really mean is all I'm saying.

Please resist the temptation to write in and tell us all what a jerk i am.

There are no unflattering remarks in my post. Just a simple, innocent, almost childlike inquizitiveness at the wonder at a tiny part of natural world.

A world in which each of you plays a part. A world in which I harbor no ill will, and all who will come play in it with me are rejuvinated by the strenghening power of my ever-loving presence.

Come. Learn to laugh again. Learn to question navy men and army soldiers as you once did in your youths.

Theirs is a world made up of making things up just like yours, and to each soul I say: Come.

# 4208. (PA-SitRep) Emergency Situation Report e-mail list for PA

Newsgroup: rec.radio.scanner
Date: 2001-12-28 15:21:52 UTC
From: pasitrep-at-pa-sitrep-dot-com
Message-ID: <3c2c8dec.317177691@news.city-net.com>
Source record: 54957

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
manhunts, and Amateur Radio Emergency Net
activations.

The PA-SitRep message posting protocol
caters to the users of text messaging capable
digital cell phones as well as users of regular
internet e-mail.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.
Subscribers are also encouraged to post major
emergency situation reports that directly relate to
Pennsylvania, but posts must consist of confirmed
and accurate information.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time. Anyone willing to abide by the posting
protocol is welcome to join.

If you'd like to subscribe, please visit the
following address:
http://pa-sitrep.com/mailman/listinfo/pa_pa-sitrep.com

For information on how to use your Digital
cell phone as a text pager, please visit the
following address:
http://www.pa-sitrep.com/cell.htm

Thanks. We'll look forward to your participation.

AMATEUR RADIO NEWSLINE(tm) REPORT #1272 - DECEMBER 28 2001

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free).

==========

Amateur Radio Newsline report number 1272 with a release date of Friday, December 28th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A not so welcome FCC Christmas present for several hams and an ARRL survey says that most hams no longer want the novice bands. These stories are first on this New Years week edition of the Amateur Radio Newsline coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: FCC DESIGNATES KEVIN MITNICK, N6NHG, LICENSE RENEWAL APPLICATION TO PUBLIC HEARING

A convicted computer hacker now has to face an FCC if he wants to keep his ham radio license. This, as the regulatory agency designates the Amateur Radio license renewal application of Kevin David Mitnick, N6NHG, for hearing. We have this report:

--

According to the FCC, Kevin David Mitnick is best known to the world as a hacker who admitted that he broke into a number of computer systems and stole proprietary software belonging to Motorola, Novell, Fujitsu, Sun Microsystems and other companies. He has also admitted using a number of means to commit

his crimes including social engineering, cloned cellular phones ad sniffer programs placed on a victims computer system. Mitnick even acknowledged altering the programming of computer systems belonging to the University of Southern California and using these computers to store programs that he had misappropriated.

Mitnick was sentenced to forty six months in federal prison for his August 9th 1999 conviction. He had previously been sentenced to twenty-two months in prison for possessing cloned cellular phones after his arrest in North Carolina in 1995 and for violating his supervised release that had been imposed after his conviction for unrelated computer fraud in 1989. He is currently on probation following his release from prison in January of 2001. And in December of 1999, Kevin David Mitnick, N6NHG, applied for renewal of his Amateur Radio Station and his General Class Operators License.

His license expired on December 12th 1999. The FCC put the renewal application on hold pending further inquiry. Now the agency has made public that it intends to challenge Mitnick’s right to hold a ham radio license and has issued a Hearing Designation Order. In plain English, that means Kevin David Mitnick has to prove to the government why it should renew his ham ticket or have his license cancelled.

The FCC is challenging Mitnick’s license renewal request on the ground that his past criminal behavior raises a substantial and material question as to whether Mitnick possesses what the it terms as the requisite character qualifications to remain a Commission licensee. The FCC says that in the context of broadcasting licenses, it has long held that evidence of any conviction for misconduct constituting a felony will be considered as relevant to its evaluation of an applicant’s character. It also says that the broadcast character qualifications standards have been used as guidelines in the evaluation of non broadcast licenses including those in the Amateur Service and that the courts have upheld the Commission’s right to do this.

The agency cites two recent cases. That of Herbert L. Schoenbohm, the ex-KV4FZ and Leslie Brewer who used to be KC4HAZ. Brewer, also known as the Tampa Party Pirate lost his ticket because of his unlicensed broadcasting in the commercial F-M band . Schoenbohm lost his based on a fraud conviction of using an unauthorized telephone access device. And the FCC says that any conviction for fraudulent conduct calls in question a licensee’s ability to act in a manner consistent with FCC regulations.

And so the FCC has ordered that a hearing be held before an Administrative Law Judge to determine the effect of the criminal convictions of Kevin David Mitnick on his qualifications to be a Commission licensee. It also says that pursuant to provisions of the Communications Act, the burden will be on Kevin David Mitnick, N6NHG, to provide proof that his license renewal application should be granted. Mitnick was given 20 days of the mailing of the Hearing Designation Order to file a response.

For the Amateur Radio Newsline. I’m Andy Jarema, N6TCQ.

--

The hearing designation order on Mitnick’s license was adopted by the Commission on December 11th but not released until Friday, December 21st. Ironically, less than twenty-four hours earlier, Mitnick had made a guest appearance on Art Bell’s Coast to Coast A-M where he discussed his future plans. At that time he was apparently unaware that the FCC had some plans of its own in regard to whether or not N6NHG will remain a radio amateur and Commission licensee.

The complete text of the Mitnick FCC Hearing Designation Order is on the web at: http://www.fcc.gov/Daily_Releases/Daily_Business/2001/db1221/fcc01359.txt (FCC)

**

ENFORCEMENT: GERRITSON LICENSE PLACED ON HOLD PENDING POSSIBLE HEARING

Kevin Mitnick, N6NHG, is not the only person hearing from the FCC in recent days. So have a number of others including another Southern California resident who could face the same kind of a hearing. Riley Hollingsworth, K4ZDH, is the FCC’s Special Counsel for Amateur Radio Enforcement:

--
Hollingsworth: “We notified a Bell California licensee; Jack Gerritson, ex-KG6IRO, that the Wireless Telecommunications Bureau, had set aside his Technician grant so that a recent conviction for radio interference could be evaluated. Now, he has no authority to operate Amateur Radio equipment until the matter is resolved.”
--

The action to place Gerritson's license up for hearing was taken November 14, 2001 and is based in part upon complaints about the operation of his station and questions regarding Gerritson's qualifications to be a Commission licensee. The FCC says that both issues were raised as the result of Gerritson's 1999 arrest and year 2000 conviction for interference to police radio communications. (FCC)

**

ENFORCEMENT: FCC REOPENS KY-W.VA REPEATER CASE

The FCC is also continuing its crackdown in the area of repeater interference issues. In fact it is taking a second look at a coordinated versus uncoordinated issue in the Tennessee and West Virginia border area. Again, Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We notified parties in a repeater dispute in West Virginia that we would be reopening that case after information that one of the repeaters is coordinated after all. We had declined to intervene earlier this year in that case.”
--

The letter stating that the FCC is reopening that case went to Michael Horn, KB8GDF, of Lenore West Virginia, Kenneth Brown KF8HL of Davin West Virginia and Carl Tussey, KB4UCE of South Williamson Kentucky. Back on January 24, 2001,

had notified the three that it had received a complaint that they were operating an uncoordinated repeater on 145.390 MHz in Mingo County, West Virginia, and that this repeater was causing interference to the coordinated KC8FKP repeater operated by the Portsmouth Radio Club that uses the same frequency. The matter was closed when the FCC interpreted a notation in the South-Eastern Repeater Associations Repeater Journal that the status of the KC8FKP repeater was not known and interpreted this as meaning that the repeater was also was not coordinated.

But now the FCC says that it has recently come to it's attention that although in the SERA Repeater Journal says that the KC8FKP repeater may be listed as unknown, it is still a coordinated system. Therefore, the FCC is re-opening its review of the issues in this matter. (FCC)

**

ENFORCEMENT: IS A GOVERNMENT AGENCY RUNNING A HAM REPEATER?

Is a government agency operating ham radio repeaters in violation of Part 97 rules? Specifically, the FCC wants to know who is really running the KD6LSO and W6SON repeaters in Sonoma County California.

The FCC says that it has received allegations that the county is in charge not the hams whose call signs appear on the machines. Since a county governmental entity cannot be an Amateur licensee, the FCC is collecting information in order to determine if there are breach of its rules. (FCC)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including Rocky Mountain Radio League repeaters serving Denver and Bloomfield Colorado.

(5 Sec Pause Here)

**

RESTRUCTURING: ARRL STUDY SAYS NOVICE BANDS MAY NOT BE NEEDED

An ARRL study group has recommended doing away with the current novice bands and divvying them up among the remaining licenses classes. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

An ARRL Novice Spectrum Study Committee has recommended that the League petition the FCC to eliminate the CW novice subbands. It also wants a rules change that will allow Novice and Technician licensees with element 1 credit to be permitted to operate Morse code on the General 80, 40, 15 and 10 meter C-W allocations at up to 200 watts power out.

These are just two of the suggestions contained in a report that will be presented to the Leagues Board of Directors when that group convenes in mid January. The study committee will also suggest recognizing portions of the 80, 40, 15 and 10 meter Morse bands for what it calls ''slow CW operation.'' The committee says that this would aid new operators in enhancing their Morse code skills.

Finally, the panel also recommends re-farming -- that’s another way of saying reapportioning -- reapportioning the current Novice and Tech Plus subbands in part. This, to allow expansion of the phone allocations on 80, 40 and 15 meters.

What will the ARRL Board of Directors do? We should know in less then a month.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP

--

The committee's determinations were based on opinions expressed by 4744 hams who respond to an ARRL Novice Spectrum Study survey launched last June. Those expressing their opinions included ARRL members and also non-members. What’s really interesting is that nearly 61% of those responding were Extra class licensees. (ARRL bulletin)

**

FCC INSPECTOR GENERAL'S REPORT: THE NAMES THE SAME

The latest report of the FCC's Office of the Inspector General contained very few items of intrigue. But according to the C-G-C Communicator, one of the more colorful incidents involved a person who allegedly used the name of an FCC employee to obtain the government-rate for a hotel room in conjunction with a government-sponsored event.

Well, it turns out that the subject was legitimately attending the event, was entitled to the government room rate and just happened to have the same name as the FCC employee. The bottom line: Case dismissed.

The complete report is on the FCC website at http://www.fcc.gov/oig/Semiannual093001-1101.pdf (CGC Communicator)

**

AMERICA AT WAR: NYC PHONE SERVICE STILL SPOTTY

It's been almost four months since the attack on the World Trade Center, and telephone service near ground zero in lower Manhattan is anything but normal.

According to news reports, repair people have restored service to most customers, but thousands of lines still aren't working. As a result, customers complain that some business lines can call out, but customers can't call in.

The collapse of Seven World Trade Center crushed thousands of underground cables at Verizon's nearby switching station. About 200-thousand telephone lines and three-point-five million data circuits were affected. The company says it'll spend as much as one-point-nine billion dollars to repair the

damage. (Telecommunications Online)

**

INTERNET SECURITY: PROBLEMS WITH XP

If you just bought a new computer equipped with the Microsoft X-P operating system, or have upgraded your old one, listen up. The Federal Bureau of Investigation says that you should take certain steps to protect yourself against hackers who might try to take advantage of major flaws that have been found in X-P.

The bureau's National Infrastructure Protection Center says that in addition to installing a free software fix offered by Microsoft on the company's Web site, consumers and corporations using Windows XP should disable the product's universal plug and play features as well. The FBI also warned computer system administrators to actively monitor for specific types of Internet traffic that might indicate an attack was under way.

The FBI did not provide detailed instructions how to disable plug and play. Outside experts also caution that disabling the affected Windows XP features threatens to render unusable an entire category of high-tech devices about to go on the market. This includes a new class of computer printers that are easier to set up. But the same experts also acknowledge that disabling plug and play in X-P could afford some protection against similar flaws discovered in the future.

Microsoft considers disabling plug and play options as being unnecessary but the company does acknowledge that Windows X-P suffers from serious problems that can let hackers steal or destroy data files across the Internet or implant their own unwanted software. The FBI says that the glitches were unusually serious because they allow hackers to seize control of all Windows X-P operating system software without requiring a computer user to do anything except connect to the Internet. (Published news reports)

**

THE LAW: A FIGHT AGAINST GRAY MARKET ELECTRONICS

A group of American high-tech companies is opening the year 2002 with a campaign to protect consumers from unwittingly buying consumer electronic products intended for foreign markets. Electronics that the manufacturers claim may not work in the United States.

Compaq Computer is one of the companies involved in the campaign. It says that the group will warn consumers about the dangers of buying such products, and how to avoid getting duped. The other companies in the group are Hewlett-Packard, 3 Com, Nortel Networks, and Xerox. The effort may prompt more lawsuits against distributors who resell so called gray market items in the United States. (Computer Products Daily)

**

SPECIAL EVENTS: USS ARIZONA K7A A SUCCESS

Steve Gurley, KJ7WK the coordinator of the USS Arizona Special Events Station K7A tells the Amateur Radio Newsline that the event was an overwhelming success. Gurley says that the memorial station contacted amateurs in all 50 states, and 8 other countries while handling over 2600 QSO's. In fact says KJ7WK, the sponsoring group has already received certificate requests from 609 stations as we go to air. There were ten operators in three counties in the Phoenix Arizona metroplex operational during most of the three days K7A was on the air. (KJ7WK)

**

SCHOLARSHIPS: DARA SCHOLARSHIPS FOR 2002

The Dayton Amateur Radio Association says that the nominating period for its annual scholarship program is now open. The deadline to receive applications is June 1, 2002 and the announcement of winners will occur around June 15, 2002. Applications are available from the DARA Scholarship Committee, 9873 Lower Valley Pike, Medway, Ohio 45341. Please note that this is a new address from years past. Again it is the DARA Scholarship Committee, 9873 Lower Valley Pike, Medway, Ohio 45341. Also, for more information on the Dayton Amateur Radio Association and its programs, please visit www.dara-w8bi.com on the world wide web. (DARA)

**

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association also asks that we remind you that the nominating period for the 2002 Dayton Hamvention Awards is now open. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations should be sent to Post Office Box 964, Dayton Ohio 45401. They can also be submitted by completing the e-form on the web at www.hamvention.org. (DARA)

CHANGING OF THE GUARD: BADGER STATE SMOKE SIGNALS EDITOR JIM ROMALFANGER, K9ZZ - SK

I’m Bill Pasternak, WA6ITF.

The ham who put the state of Wisconsin on the ham radio map has passed away. This, with word that Jim Romelfanger, K9ZZ died Saturday evening December 22nd of an apparent heart attack..

According to Romalfanger's close friend Ken Ebneter, K9EN, Jim has been in declining health for some time. Romalfanger had a stroke a few weeks ago, affecting his right arm which was already weakened by polio. But Ebneter says that K9ZZ seemed to be improving until just recently. Ebneter says that Romalfanger had been in the hospital early last week but was home when he passed away of an apparent heart attack. In fact, K9ZZ had stopped by to visit a ham radio friend that afternoon. Another friend found him dead that evening when he stopped by to visit.

His full name was Arthur James Louis Romelfanger but to the world of ham radio he was Jim, K9ZZ. And Jim Romalfanger made Wisconsin a ham radio household word by editing as three decade state-wide ham radio monthly newspaper called Badger State Smoke Signals -- and doing so as a volunteer.

Notice we said newspaper and not newsletter. This is because Smoke Signals is just that. A newspaper that at its peak ran up to 40 pages filled with articles about ham radio in the Badger State. In addition to being the 32 year editor of Smoke Signals, Romalfanger was nationally published over the years in CQ, QST, 73, Ham Radio, Popular Electronics, and other magazines.

Jim Romalfanger was first licensed January 1958 in Pacific Beach, California, as KN6LWB. Upgraded to General in May of 1958. He returned to Wisconsin that summer and became K9PKQ. In 1977, changed call to K9ZZ and held that call sign the rest of his life. Funeral services were scheduled for Friday, December 27th at St. Joseph Catholic Church in Baraboo Wisconsin.

Jim, from all of your friends at the Amateur Radio Newsline: We are going to miss you. (The Baraboo News Republic, K9EN, WB9QZB, and other friends of K9ZZ contributed to this report.)

**

AMAZING DISCOVERIES: CIRCLES WITHIN A CIRCLE

One of the most curious pure mathematical discoveries for 2001 was announced in the easy-to-read article at an incredibly long website. In brief the article says that research has led to some remarkable geometric findings involving interrelationships between tangent circles and spheres. In other words, mysterious circles within a circle.

As one researcher put it, "Where do these numbers come from? What's going on here?" Find out by going to www.sciencenews.org/20010421/bob18.asp (CGC Communicator)

**

INTERENATIONAL - CANADA: NEW ALBERTA SM

On the international front, word that Thomas Martens, VE6TRM, has been appointed the new Radio Amateurs of Canada Section Manager for the province of Alberta and the North West Territories. Martens replaces Alan Faint VE6QQ will

be stepping down from the position due to personal reasons. Martens will serve the remainder of Faint’s term which runs through June 30th, 2003. (RAC)

**

INTERNATIONAL-AUSTRALIA: CSIRO MICROTURBINES

Australian hospitals, restaurants and schools could soon source clean, reliable energy from mini power generators that operate independent of the main grid. This as CSIRO has installed Australia's first commercial microturbine, at their North Ryde Laboratory, Sydney.

The size of a small refrigerator, the turbine produces 30 kilowatts of power, independent of the electricity grid. And it does this with reduced greenhouse and other gas emissions. Thirty kilowatts is enough to power a medium commercial building such as a restaurant.

Along with fuel cells, gas engines, storage technologies and some renewable technologies, microturbines can be used to generate power close to the end-user and provide major gains in reliability and power quality. Once the design can trickle down to the home user level and price range, it could offer hams a way of always having emergency power always at hand. (Q-News)

**

SHORTWAVE MONITORING : RADIO NORWAY CLOSES

The Board of Directors of the Norwegian Broadcasting Corporation has decided to stop its own programs by Radio Norway International. This is effective as of December 31st of 2001.

According to DF5SX and G3VGW, Radio Norway’s final show was hosted by veteran broadcaster Einar Lie on New Years Eve. Also, the 1200 kilowatt Medium Wave transmitter on 1314 kHz on Kvitsoy was supposed to cease operation by December the 31st as well.

The Norwegian Broadcasting Corporation will have to negotiate with transmitter providers Norkring and Radio Denmark to close down as well. The Norwegian Broadcasting Corporation and Norkring have a contract for running the transmissions that goes through December 31st, 2003. The agency also has a leasing agreement with Radio Denmark for the same period. (Media Network)

**

DX

In D-X, keep an ear open for King George Island in the South Shetland group. HFZ0POL is reported on all H-F bands, including the newer ones, using CW, SSB, RTTY and PSK31. QSL HF0POL via SQ5TA.

And the United Arab Emerates has been heard lately A61AJ. He has been QRV on 40 meters CW around 1400 UTC. Q-S-L A61AJ via N4QB. (Various DX sources)

**

THAT FINAL ITEM: RILEY SAYS THANKS

And finally as the year 2001 comes to an end, the FCC’s Chief Rules enforcer, Riley Hollingsworth has some words of praise for the ham radio community. He passed them along through his bi-weekly Enforcement Log at www.rainreport.com, and thanks to them, we have is words for you:

--
Hollingsworth: “I would like to point out Hap, that this is the end of the third year of Amateur Radio enforcement and I will honestly say that the overall level of compliance in the Amateur Radio Service is outstanding. The Amateur licensees do a great job and they do a great job of showing that the Amateur Radio Service is -- indeed -- the only fail-safe communications system in the world and we are very proud of them.”
--

And if I can take off my reporters hat for a moment and editorialize a bit, I guess I speak for many who truly appreciate what you have done to return the Amateur Radio bands to the law abiding members of the nations ham radio community. (ARNewsline(tm), RAIN)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). # 4213. Trance-Formation of America: Epilogue

Newsgroup: rec.radio.scanner
Date: 2001-12-28 20:23:02 UTC
From: greg@trance-formation.org
Message-ID: <24edf465.ce029768@trance-formation.org>
Source record: 54974
Cross-posted to: rec.games.video.atari,rec.arts.movies.international,rec.radio.scanner,rec.arts.tv.soaps.cbs

The safety and serenity of Alaska provided an atmosphere conducive to deprogramming, despite the pandemonium that ensued. Mark Phillips was the first man who not only did not abuse us, but cared for our welfare and well being. His patient, gentle manner was therapeutic, while his propensity for handling weapons and apparent intellect kept us safe against all odds. Through his noble actions, Mark taught Kelly and me that the world of human interaction in which we had existed for so long was contrary to most human behavior. We learned that goodness does exist on this Earth, and that there were those in Washington, D.C. who refused to tolerate the mind-control atrocities they witnessed us and others enduring.

As my eyes opened and I woke up to reality, I became enraged. Enraged for the traumas inflicted on my daughter. Enraged for a lifetime of abuse at the hands of our country's so called "leaders". Enraged that the American public had no idea as to who and what was/is running their country. Mark helped me refocus my rage in a productive direction when he told me, "The best revenge is total recovery."

I began recovering at the rate of 18 hours a day through intensive therapy destined to restore my memory and, ultimately, my mind. I learned the ins and outs of my own mind and recovered my memories in a journal. The stack of journals grew as over a decade of White House/ Pentagon-level abuse flooded my mind and intruded on my thoughts. Pictures from my past flashed across my mind as neuron pathways opened in my brain. I was regaining access to my own mind and control over my future by recovering my memory of my past.

Best of all, I was falling deeply in love with Mark Phillips. Why wouldn't I fall in love? He rescued my daughter and me from certain demise, restored my free will, and was helping me recover in total safety, and was the polar opposite of my abusers. He treated me with love, respect, and thoughtful consideration . Equally as important, Mark proved to be an ideal father figure to Kelly. He provided here with unconditional love and deep understanding. Through him, Kelly caught a glimpse of how kind men could be--and how good life could be. I had long since ceased to know that such a man even existed.

The love factor in my recovery is considerable. Not only did Mark Phillips save my life, but now I had a reason to live it! The love we share kept me going at times--like when Kelly was institutionalized in 1989 for homicidal/suicidal behavior. The loving relationship that Mark shared with Kelly during our short year together as a family was sufficient to arm here with the strength to survive her ensuing ordeal

as a victim of the so-called mental health and criminal justice system.

Kelly, now 15, remains a political prisoner in the custody of the State of Tennessee where she is denied qualified therapy for the MK-Ultra Project Monarch Mind-Control abuses she endured. The state of Tennessee, under the politically powerful influence of Kelly's abusers, is in violation of numerous laws and basic civil rights in their determined efforts to keep Kelly from qualified therapy and the family she loves.

While many of those in positions to make a difference in Kelly's case operate on a "Need to Know" basis rather than deliberately conspire with the bad guys, a closer look into Kelly's case history should raise serious questions in their minds. Questions like; "What could a child have to do with the so called "National Security" of our country?" The Juvenile court judge presiding over Kelly's case closed the doors to the media and onlookers for "reasons of National Security" while gross and blatant violations of laws and rights ensued.

For over three long years, Kelly and I have been denied our right to an unbiased attorney while court-appointed advocates and so-called "guardians" join forces with attorneys paid off by me pedophile father. My own court-appointed attorney, who doubles for the Juvenile Court judge when he takes a day off, has yet to represent my interest. My interest is in Kelly's well being and future-- and if she will have a future at all.

While Kelly is still amnesic with regard to most of her past, she is deliberately denied therapeutical access to her past, due to who and what she will recall. I am denied access to Kelly for fear she would be triggered into remembering by my mere presence. As for my deliberately "triggering" Kelly to remember what she was supposed to forget, as her abusers fear, it has been my experience that recovery must come from the inside out. Not from outside input. I want no less for Kelly that the piece/peace of mind I have gained through qualified rehabilitation. Which raises the questions: Why has the Juvenile court prohibited us from saying the name "George Bush?" Why is the "Wizard of Oz" a taboo subject for Kelly while the State of Tennessee provides her with Stephen King horror novels? Why are Kelly and I forbidden by the court to say the words "President," "politics," New World Order", and "mind-control"?.

In an attempt by state employees to "normalize" our relationship, Kelly and I are forbidden to discuss the past, my immediate efforts to affect her dire and desperate situation, or future plans as a family.

Most appalling and unjust in Kelly's view is the State of Tennessee's refusal to allow her any contact whatsoever with Mark Phillips. While I am hindered from having private conversations with my daughter due to court ordered supervisions and censorship, Kelly is denied the right to even wave to Mark across the parking lot. Considering that, like me,

Mark has never been named as an abuser, declared unfit, or violated any court orders, the questions must be asked: "Why does the State of Tennessee go to such lengths to ban all communication between Kelly and the man who rescued her and taught her the meaning of unconditional love?"

Kelly has asked these questions for years to no avail. The State of Tennessee refuses to even acknowledge her request for"an unbiased attorney who will represent her interests instead of those of the state". Kelly's pleas for an attorney to represent her go no farther than the deaf ears of the assigned state social worker "managing" her case. This social worker is operating on a "Need to Know" basis that has no basis, and she "Needs to Know" that she, along with the State of Tennessee, will be held accountable in the event that Kelly hurts someone or herself.

Kelly's frustrations have mounted beyond her ability to cope. I applaud Kelly for her determined but weakened efforts to stay in control of her own mind despite being denied qualified rehabilitation for the devastating results of Project Monarch Mind-Control abuses. Kelly's daily attempts to accomplish the impossible by psychoLOGICALLY managing her psychiatric disorder is proportionate to her high intellect and willful determination. But it is not enough to fend off the Psychological Warfare that has been waged against her through CIA Damage Containment practices designed to keep her contained in amnesic silence. She needs help. She needs a collective voice.

Kelly can be helped through public outcry and through abolishment of the 1947 National Security Act (and 1984 Reagan Amendment to same) that has destroyed the true security of our once great nation. You can write the State of Tennessee demanding to know why Kelly is being denied her right to qualified rehabilitation.

Thank you. - Cathy O'Brien

Every submitted comment of encouragement will be greatly appreciated!

# 4214. LCD SCREEN. for RS/ 2006...

Newsgroup: rec.radio.scanner
Date: 2001-12-28 20:56:18 UTC
From: gig@i-2000.com
Message-ID: <3c2cda84.20140360@news-server.optonline.net>
Source record: 54964

HELLO ALL
OK, the years have gone by.. and now it's time to replace the screen on my RS 2006, Now i know better than to give to RS... Does anyone have a part# for the screen appx cost- or for that matter any experience in installing this. I'm laid up for a while had back surgery.. need a small.. project to keep me fom going crazy in the house..
Thanks..
gig@i-2000.com..

# 4215. Poughkeepsie / Dutchess NY

Newsgroup: rec.radio.scanner
Date: 2001-12-28 21:10:44 UTC

Hate to bother, but does anyone here scan in Dutchess county NY
(poughkeepsie, actually)

I used to do a LOT of scanning in the area, but its been a few years
now. Im trying to find the old police frequencies, but the ones in my
police call dont see to have any traffic on them

Wondering if someone could help me out

Thanks

# 4216. REQ: Number stations reachable in Poughkeepsie NY?

I bought two as spares for my 2006's when the time comes. The part designation was EL-501 with a part number #10800050 which you can get direct from RS at 800-843-7422. Seems to me they were about $35-$40 a piece but that was a while ago; not sure if they still have 'em but worth a try. Having a service manual is a big help too.

For some help doing the replacement see:

http://home.cfl.rr.com/scan/Backlight.html

which I hope is still there.

Hi all. Does anyone monitor the Navy Giantkiller VHF freqs for NY & NJ? They're 135.225 for NY and 135.725 for NJ. I have yet to hear any activity, after weeks of having the freqs programmed. There are UHF freqs (http://www.milaircomms.com/uhf_facsfacva.html) but I only have a BC245XLT with the Radio Shack 20-006 extendable whip. Can anyone help?

Off the top of my head, the NYS Thruway PD use 453.525 and the
State PD on the west side of the Hudson (Troop F) are duplex on
155.535 (base) & 154.935 (mobiles) while Troop K (east of the
Hudson) use 155.505 base & 154.92 mobile. Also used by the
troopers are 154.665, 154.695 (emergency freq), and 155.565.

# 4227. FS: Icom IC-R7000 with Options

Newsgroup: rec.radio.scanner
Date: 2001-12-29 00:09:30 UTC
From: Fred Allen <fallen-idc@worldnet.att.net>
Message-ID: <_Q7X7.244517$3d2.12005928@bgtnsc06-news.ops.worldnet.att.net>
Source record: 54978

I have Icom IC-R7000 VHF/UHF Receiver for sale. It includes:

Icom R7000
RC-12 Remote Control
IC-CK70 DC Kit, (never used)
IC-MB12 Mobile Bracket, (never used)
Copy of the R7000 Receiver Manual

The R7000 is in excellent condition; there are few small scratches on the
RC-12 Remote Control.

A picture can be seen at:

http://home.att.net/~fallen-idc/idc/ic7.jpg

Price is $665.00, or best REASONABLE offer.

Thanks,
Fred

I have both and in my opinion it all depends on what is most important to
you.

The Pro-93 does use standard batteries so it is easier to replace. Also,
I think it does a much better job in scanning multiple trunking systems
as well as scanning of trunk and conventional. It is also easier to
program trunking with the control channel only mode.

However, the BC245 is easier to use (in my opinion). The lock out and
talkgroup list functions perform as you would expect on a trunking system
while the Pro-93 requires an non-intuitive combination of FUNCtion keys
to accomplish the same things.

John

While doing some research for frequencies on the FCC Search page:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
I found the following licenses in Halifax County Virginia.
Can anyone tell me what these systems are used for? Are they worth
monitoring to a railfan?
Are these AAR frequencies some sort of telemetry system? A trunk system?
What is the NS system for?
Thanks for any/all replies!

It's a decent radio. There are other decent radios. Search the archives of
this group to read plenty about why you should buy whatever radio somebody else
bought.

On the other hand, a more productive use of your time might be to read whatever
reviews are out there, particularly the ones in Passport to World Band Radio,
World Radio and TV handbook, and on the web at:

http://www.rnw.nl/realradio/rx_index.html

and

http://www.dxing.com/rx.htm

Just remember, everybody has an axe to grind.

## 4239. Ye new Pro-93

Newsgroup: rec.radio.scanner
Date: 2001-12-29 03:01:35 UTC
From: RLB <sandpond@fuse.net>
Message-ID: <u2qchgj1bsf60a@corp.supernews.com>
Source record: 54990

I bought a Pro 93 despite the rumors of bugs. I've about done all I can do with the thing so far and haven't seen any problems. What is the deal exactly? Something about Alfa tags in the 1 and 4 banks crossing to eachother?

I'm also wondering if there is a good internet site to get a fairly good list of frequencies to try. I tried the a FCC site, but lost patients with their layout. I'm in Northern Kentucky, right across the river from Cincinnati. Any suggestions?

# 4240. Re: Newbie Looking for Decent SW Radio

You get a cassette adaptor that comes with portable CD players

plug the lead into the scanner, and the adapter into the cassette
slot and play the tape as usual and bingo it works a treat.

Source record: 54853
Cross-posted to: rec.radio.scanner,misc.transport.rail.americas

Here is a way to list rail related frequency coordination applications from AAR (among many others) to the FCC on behalf of rail interests. Click on this link & select AAR from the pulldown table of coordinators then click OK:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/filenum.hts

this can give a heads up for new frequencies that upon approval would then be listed in the searchable General ULS database:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

127 pending rail application as of tonight, everything from Alabama RR to Wisconsin Great Northern RR!

Happy Hunting!

# 4253. Trade Unblocked Icom R2 For SW Rx

I'm trying to program my county's trunking system (as seen here; Salem County http://www.trunkscanner.com/states/nj.html) and I just cannot seem to figure it out. As you can see, the offset is listed as 25.0 and I cannot get the scanner to accept anything even close to that, it seems stuck on the 380 area. Can anyone possibly point out what I'm doing incorrectly, or maybe walk me through this? Any help is greatly appreciated! :-)

-Cory

If you have "UHF" Mil band, try: 249.8, 338.1, and 255.0 (as well as the freqs mentioned below). I've heard activity on all of these. And yes, they are all in AM mode.

The Giant Killer freqs are a great place to find other freqs because when leaving GK control, they will annouce the next freq they're going to.

Hey Falcon,
A bit of bad news for you. The BC245XLT only receives FM on htose frequencies listed as military land mobile. The GiantKillers are transmitting in AM. I get them on my Icom R2, but I can change the receive mode. I'm also on long island. Perfect excuse to go buy another radio.

Another way to calculate antenna length is 234/f (frequency) = antenna length in feet for a quarter wave antenna. And 468/f = length in feet for a half wave. Just multiply by 12 for inches. Here is a good site for this sort of thing: http://www.qsl.net/kb5wck/antenna.html I hope this helps.

What will you guys be listening to on New Year's Eve and day/morning. I would hope that nothing more than a few drunks and noise complaints, but then there IS reality. Groupings of hundreds of thousands of people GLOBALLY is an obvious attraction for certain sinister types, so if something goes down I want to know about it above and beyond CNN. So what will be the best choices for New Year's?

Citywide or Citywide-like channels(Where available)
Local Precinct(New Year's celebration Locale)
Tactical Channels
Designated Channel for New Year's Detail(If we can find it)

# 4269. Please post any New Year's related activiy here!(Globally)

<jazzybjazzy@hotmail.com> did write, or cause to appear, hereinunder
or as incorporated herein by reference:

>Hi, I'm new to shortwave and am looking to buy a decent radio. I'm
>considering the Grundig YB 400. Does anyone have any comments, good or bad,
>to make?

I have one. It is a good radio. Some comments, as requested:

- Refurbished models are commonly available at much lower prices than
new. If you decide on a refurbished unit make sure you buy from a
reputable dealer, as these sometimes have problems (as did mine).

- This radio benefits greatly from an external antenna. Don't bother
with an expensive antenna - 5 or 10 meters of ordinary solid wire
works wonders.

- The radio is slightly top-heavy and tends to fall over easily,
especially with the antenna extended.

- If you will often be using battery power, invest in a set of
rechargeable NiMH batteries - not NiCad. Rechargeable NiCads don't
last long in this radio.

# 4273. Re: RAIL: American Assoc. of Railroads/Norfolk Southern UHF system FCC licenses?

I wonder why they would do this? The purpose of the Hot Box alarm is
to notify the crew and dispatcher, on the active Road channel, that a
problem exists. On some lines, the crew is required to repeat the Hot Box
message to ensure (on the dispatchers' recorder) that the crew actually
monitored and acknowledges their status.

Does anyone know if the frequencies used by the MP's, fire, ambulance, etc... are standardized on Military installations or are they different for each post? I've been trying to find the freq's for Fort Riley, KS (where I am stationed) but after searching the net I've only found about 3 frequencies and I'm sure there are many more than that.

On a side note, I'm a Signal Corps officer too so you would think I should be able to find out these frequencies :-)

Thanks,
Karl

>Cincinnati. Any suggestions?

There's a PRO-93 discussion group on Yahoo. You mght join that for
info, other people's experience and software. You might find someone
in your neighborhood there.

Rich Wells' site, www.strongsignals.net , is always a good starting
point for info and frequencies. Check the links at the bottom of the
trunking message board.

I'm looking to buy a scanner and was hoping someone could lead me to the
best scanner for the money. I have been looking at Radio Shacks PRO - 2052
but don't know about their quality.
Thanks in advance
Dale

Contrary to what others incorrectly have told you, your BC245XLT receives AM as desired on those frequencies which is what Gaint Killer uses there (The BC245XLT switches to FM at 137 MHz.) The reason you here little is that you are too far from a base and the aircraft mostly use Giant Killer's UHF frequencies. Even on their UHF frequencies, do not expect too much traffic,

The Pro-2053 that is on sale for $179.00 and has a good reputation. The
2052/92 have a lot of features but have a lot of bugs. Also check out the
Uniden 245xlt and 780xlt.

got my RS flyer today--looks like the 2053 isn't on sale anymore and, as
others pointed out, has been replaced on sale by the handheld Pro-93 at
$170. Sale is running for awhile though--the flyer says 2/3/02. Personnally
I'm completely torn about whether to go for the handheld or wait for the
2053 to come up again. I'm concerned about the audio on the 93.

Hey, go to http://www.strongsignals.net/ and check out everything
that's happening nowadays. You should be able to find Bob Parnass's
scanner faq or a link to it there as well. I believe he posts it to this
group regularly, as a matter of fact.

As to the antenna, is it a TV antenna or a scanner antenna? You
should be able to use it either way, but you may have to modify it
if it's a TV one.

These are the ATCS frequencies. Used (mostly) for replacing wirelines to trackside signals, altho they can be used for any purpose where a data link is needed (UP, and I think CP, experimented with sending work orders to train crews using ATCS radios, and the AAR was looking at using them for PTC at one time).

Some sort of telemetry link, I'd guess, based on the 20K0 emissions.

Giant Killer controls (via RADAR and ATC) the airspace in the "Warning Areas" along the coast. These are shown on any aviation map. The warning areas are quite large and cover a large area south of Cape Cod and Long island, and east of Atlantic City. Much of the traffic moving through these areas consists of Air National Guard training flights. Typically these used to occur weekdays around 10 AM and 2PM. The ANG conducts war games in the warning areas. Giant Killer gives them clearance when they enter and exit the area. I'm not sure what their schedule is now. But with the added military presence since 9/11, I'm certain there is action on these freqs. You just have to get lucky and be listening at the right time.

BTW, GK is physically located in Virginia, but has transponders throughout the northeast. I have heard GK many times through these transponders.

> The Pro-94 is the Bc-245Xlt with 700 extra channels.

Not quite. It has no computer interface and no attenuator. The attenuator is important because the radio is easily overloaded. The 1000 channels cannot be used at the same time since they are divided into A and B sections of 500 each. Programming all those channels plus up to 1000 talkgroup id's by hand is not fun. The BC245 can be programmed via the interface in 90 seconds. That makes it possible to load custom programming so you can take it on trips. This is impractical with the PRO-94.

For trunking the BC245 has 10 scanlists and 100 id's per bank. The PRO-94 has only 5 scanlists and 50 id's per bank. If the system you monitor has 51 id's of interest, you have to use up two banks in the PRO-94 when one will cover it in the BC245.

I'd certainly rather have a BC245 than a PRO-94. For that matter, the PRO-93 is better than either of them.

# 4306. Re: BC700A Date Code ????

Newsgroup: rec.radio.scanner

Source record: 54906

The date code consists of a two digit code representing the month followed
by another two digit code representing the year.
For example, the date code

0AID would decode to Jan 1994 0A = Jan (A=1, first month of year)
ID =94 (I=9, D=4)

0EIC would decode to May 1993 0E = May (E=5, fifth month of year)
IC = 93 (I=9, C=3)

0CI0 would decode to March 1990 0C = March (C=3, third month of
year) I0 = 90 (I=9, 0=0)

A=1, B=2, C=3, D=4, E=5, F=6, G=7, H=8, I=9, 0=0

I have both the PRO2052 and the 780XLT. The 780XLT is an EXCELLENT
receiver for MilAir! Excellent sensitivity and doesn't seem to have
image problems or overload problems.

For starting in MilAir listening you should check out

Karl,
I think you'll find what you are looking for on www.MilAirComms.com I
had just added both Ft. Riley and Marshall AFF. Click on the
"Military VHF/UHF Freqs" link, then on the Ft. Riley link and you'll see
a list of about 80 freqs for Air, Fire, Medical, MP's and a few others.

# 4312. Mobile amateur VHF/UHF TX and scanner

Newsgroup: rec.radio.scanner
Date: 2001-12-30 01:45:27 UTC
From: Bumpa <nospamhanrahan@kua.net>
Message-ID: <0urs2u43i1mrg7o3qbutn8npbv27coe384@4ax.com>
Source record: 54922

I'm thinking about possibly acquiring a new VHF/UHF scanner - for primarily mobile use - to replace my old Pro-2006. I'm also interested in transmitting on the VHF/UHF ham bands after an extended absence from amateur radio. Is their any current generation equipment out there that would fit the ham bill while providing general scanning features (including the aviation AM band)? Ideally it would be great if such a combination existed that would provide trunking features, but I'm guessing that's probably wishful thinking on my part.

Bill, KA1KF

Mostly for MilAir bands. Living in Florida is MilAir heaven! Within listening distance

to the Kennedy Space Center and several very active military training areas what more could a person want?.... Ok I do have one scanner tuned to the trunking system in Daytona. The Daytona Beach, FL Police are always good for a laugh! Especially their "secret vice" talkgroups. I've lived in much smaller cities before where the police sound very professional. Then I move to a large city and these guys (Daytona Beach) sound like the "three stooges!".

747 will.
Most ordnance dropped vary from Mk82 500lb bombs to the bigger 2000lb
variants and each aircraft has a max payload of about 10,000lb (excluding
things like b52s)

> 2052/92 have a lot of features but have a lot of bugs. Also check out the
> Uniden 245xlt and 780xlt.
>

If you want to do any MilAir Listening then the PRO-2052 is a better choice than the 2053. I've owned a 2052 since it first came out and haven't run into any bugs with that radio. The PRO92 was the one that I know of that was loaded with bugs, say away from the PRO92! The PRO 94 however is a great radio (have two of them) but will not cover MilAir bands. The 780XLT is another great scanner, this is starting to be my all time favorite (PRO2052 coming in second place)

If you're just wanting to listen to Police/Fire and want to save a few bucks then the PRO2053 or PRO94 would be good choices. But if you want to listen to the 225-400MHz region then the PRO2052 or 780XLT would be the way to go.

I have a review of the PRO2052 on the http://www.MilAirComms.com website you can check out.

The B-52H can carry a combination of 70,000 lbs of ordnance both internal and external. I cannot find a shrewd out of how much it can carry in it's internal stores. I'll bet that the B-52 can carry an internal store of at lease 30,000lbs. They might have to modify the A/C so that the weapon can span both bombays.

When programming my scanner why is it rounding the frequencies up? For instance if I type in the freq 141.0875 the display then shows 141.090. But I know it holds that many decimal places because in that same bank I have the freq 462.6625 showing up.

Any ideas?

Thanks,
Karl

Outside the obvious, I listen to the Yankee stadium crew when I am at the games.
I also tune into coaches who use wireless headphone/ mikes during HS football games.
Al

Go to http://www.strongsignals.net and look around at the reviews
there - there are many radios and depending on what your main interest
in monitoring is, you'd have to decide which covers the bands you want
to hear. Trunking is another thing to decide on, and the TA as well as
several city agencies are using trunked systems now. You'd need one
that does trunking if you want to hear that. Some, like the Radio Shack
PRO 2052 & the BC780XLT, cover the military airband while many
do not, and you might be interested in monitoring that. These two also
do trunking as well. There's a lot of things out there to listen to, and
once
you decide your priorities and purchase one that picks up what you're
interested in. Any of the ones available today for more than $100 will
cover the standard things like police, airband, railroads, feds, etc.

The Uniden BC-780XLT is the best radio in that price range. You will need
the PL and narrow bands modes for New York City.

Not really, you could try out the Radio Shack PRO-93/2053 scanners that
are on sale or the Uniden BC-245xlt. I use a Kenwood TM-261A & Pro2053
to cover the bands.

<snip>

The AR8200 is made by AOR, but it's a DC-daylight radio, so it's not
your best choice if you're just interested in SW.

# 4352. Bearcat 780xlt Antenna needed

Newsgroup: rec.radio.scanner
Date: 2001-12-30 14:43:01 UTC
From: stuffy8@aol.com
Message-ID: <20011230094301.03454.00002195@mb-cg.aol.com>
Source record: 54803

Hi,

Can anyone tell me what a good antenna would be for this scanner out in Long Island New York? I just bought this 780xlt and would like to pick up much better reception. If you know of any websites or actual stores where I can go and buy onte that would be great!
Also, is there soemthing that I can get to better program in channels and text into this machine?
I can be reached at Stuffy8@aol.com

Thanx!

Cool, thanks for the link....it is a TV antenna..I found a bit of info on TV antennas vs. scanner antennas...nothing about mod'ing the antenna though.

## 4354. Speech inversion descrambling

Newsgroup: rec.radio.scanner
Date: 2001-12-30 16:03:24 UTC
From: ctpds49@aol.com
Message-ID: <20011230110324.03454.00002206@mb-cg.aol.com>
Source record: 54805

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

Go to http://www.nf2g.com/scannist/index.html and click on trunking and then on New York under the ComNet/Ericsson column. Scroll down to the table called NYCOMCO Poughkeepsie - Illinois Mountain. The listed frequencies must be entered into the radio in the exact order and position given in the table. Talkgroups are listed below the frequencies. If you have a PRO-93 now, you can get programming software on the PRO93 Yahoogroup in the files section. This will make it much easier to get the radio running correctly. If you need further help, please start a new thread as this one may drop off my news server soon.

# 4360. Aircraft Band Scanner

Newsgroup: rec.radio.scanner
Date: 2001-12-30 17:32:58 UTC
From: jsevans@nc.rr.com
Message-ID: <3c2f7987.17279644@news-server.nc.rr.com>
Source record: 54811

Hi everybody,

I am looking for a scanner or a kit for a scanner that can pick up aircraft band. I don't need anything that is too complicated, and I don't need a lot of features. I live near a major international airport and I would like to monitor the everything that I can. The only thing that is absolutly necessary is that I have some way to know what frequency I am listening to. Digital tuning would be wonderful, but not absolutly necesary if the radio has a easy to read analog tuner. I would appreciate any suggestions that any of you might have. Thanks.

Jason Evans

Hi
May I suggest http://www.grove-ent.com/hmpgmt.html for starters. From
that page you can get to Bob Grove Enterprises. They offer a wide range
of products for scanner listeners. They also have software that will
let you program and play with this radio much more quickly. In
addition, the 870 has its own users group on Yahoo, that you may find of
assistance.
On Long Island an outside antenna will help in picking up signals.
Being relatively flat and surrounded by water the 780 will grab a lot of
signals.
Good luck.
Pete

# 4362. best place to buy accessories for my scanner?

Newsgroup: rec.radio.scanner
Date: 2001-12-30 17:56:40 UTC
From: Karl <usereplytoaddress@hotmail.com>

I'm trying to find a new battery for my BC200XLT (it's about 8 years old). I tried replacing the internal battery a couple years ago (unscrewed the pack and put in the one that looks like a cordless phone battery) but that didn't work, so I guess I need to buy the whole part that goes on the bottom. Currently, the scanner works when plugged in, but won't hold a charge at all so it doesn't work when not plugged in.

Anyone know of a good place where I can find a replacement battery for this? Radio Shack doesn't carry anything for my scanner; guess it's too old.

On a similar subject, how about a new antenna for my BC245XLT? I've heard I can get better reception with a new antenna. Both the 200 and 245 still have the stock BNC antenna that comes with the scanner.

Thanks,
Karl

Which suggests they will be moving to 800mhz trunks as an active
channel, as they build up their equipment.

Radio Shack sells a discone antenna that does a good job. As for
software, try this:

http://www.butel.nl

That's the source for ARC780, a decent program with a free demo
and cheap purchase price.

Good luck!

Here is the new thread that you requested.

So on http://www.nf2g.com/scannist/nys_ege.html for illinois mountain, it has 20 channels. I need to put them in, in that order, under my channels, in that order? So i need to have Channel 20 on my scanner set to channel 20 on that list?

Sorry, im fairly new at this whole trunking thing... my parents have had a trunking scanner for years, but they just got the people at the communications reseller to program it for them

Thanks for all your help with this

Yes, just pick a bank to dedicate to the trunked system and enter the frequencies exactly as they appear in the table. You didn't confirm if you have a PRO-93, but if you do, channel x00 is not programmed. Start with channel x01 and proceed down the list, leaving channels shown in the table as 0.000 unprogrammed. I can be more specific if you tell me what scanner you are using.

Are you saying NYCOMCO programmed your parents' scanner?

Mobile, base or portable? Do you want to spend a lot of money or a little bit?

Most all scanners these days come with the 118-136 MHz aero band in them. If your major metropolitan airport also has military aircraft in the area, you would might want to search out a scanner that handles 225-399 MHz as well.

If you want a new scanner, check places like Radio Shack, Wal-Mart, ham radio shops and others. If you are looking for a used scanner, check e-bay (you can also find some new ones there!). There are also many other places on the internet that you may be able to find one. A trick for looking on e-bay is to list all the scanners you see there, go to some internet sites that sell the same models and compare the prices.

>span both bombays.
B52's internal carriage is limited by volume rather then weight
usually. The size of the bomb bay was dictated by the size of the
first deliverable Hydrogren Bomb and it's estimated weight, which were
considerable (Visit the Atomic Museum at Kirtland AFB in ABQ and you
can appreciate the size of the thing). there was no need to expand it,
because as weapons development progressed, and the weapons moved from
liquide Dueterieum/tritum (effective liquid hydrogen) to Li6 fueled,
the size came down quite dramatically. As the size falls, the size of
the U238 tamper comes down, dropping the weight considerably.

The 30,000 pounds is in fact the weight of the first deliverable TN
weapon.

It is not until Viet Nam (AFTER the last B-52H has been built) that
people seriously consider the B52 to drop conventional weapons.

Yeah, i got the pro-93 yesterday on my way home (and an ac adapter,
and rechargeable batteries, and the 2002 police call...) The deal was
just too good to pass up

Okay, so i do it as a bank. Thanks

My parents are in CT, and a few years ago West Hartford went to a
trunking system. They had to ditch the old Bearcat 210xlt (which
lives in my closet here in NY now), and got a trunking scanner. They
couldnt figure out how to do the scanner, so they brought it back to
the dealer and had him do it for them!

Thanks for your help! Ill let you know how it goes

Hey, why is it that when I'm listening to cordless phones in the 900MHZ
range sometimes it cuts in and out. Like, if they talk all softly it's fine
but if they raise their voices it gets choppy.
--
Thanks,

It sounds like you are trying to listen to wide FM with a Narrow FM
receiver. I've seen the same problem on 149.75mhz (NFM mode).

Good luck!

You'd have to turn the horizontal antenna elements 90 degrees
so that they are vertical. Keep in mind also that this would be a
very directional antenna, that is, it would receive its best signal
from the direction it's pointed in at the expense of other signals
in other directions. That is what a TV antenna does - it focuses
in one direction because there may be another station on the same
channel in the other direction.

A vertical or a discone, in contrast, would be omni-directional.
You can search for some alternatives on the net that you can build
yourself for a few bucks that would work fine. I built a discone from
cut-up wire coat hangers and some PVC pipe that worked great.

I just looked thru my bookmarks for homebrew antennas and I don't
know why, but none of the ones I had are up anymore. Try searching
for "homebrew antennas" and you might come up with some diagrams
and info on building one. It doesn't have to be fancy, and if it's in your
attic, it doesn't even have to be weatherproof! I got your address & if
I come across anything I'll send it to you.

# 4382. IF8200 cable for AOR AR8200 scanner???

Newsgroup: rec.radio.scanner
Date: 2001-12-31 01:42:37 UTC
From: NightRunner <jackfrostnippin@yernose.com>
Message-ID: <dmgv2us3ask633il233resq85a29957flf@4ax.com>
Source record: 54833

I'm just this close |<--->| to making my computer interface for my AR8200 MKII, and aside from some little items, I'm needing a cable. I've looked at my options, and although the HP Palmtop cable is cheap, it lacks some of the wiring functionality I'd want in the final build of my interface. In the spirit of finding a more comple cable, I found that _nobody_ seems to offer the OS8200 cable anymore. I *did* manage to find a few places that sell IF8200 cables, but I can't find any information anywhere on what it is and how much functionality it supports... There isn't even any mention of it on the AOR comapny websites, that I can find anyways.

If anyone knows anything about this cable, I'd love to have more info. Specifically, I want to know if it will give me wires for everything (data, agc, discriminator, s-meter, etc.), and of course a wiring chart would be pretty sweet too if it turns out to be what I want.

Thanks for any help!!

Does anyone have any recommendations for a good VHF TV antenna to use on my VW Eurovan? I want the passengers to be able to watch TV on the laptop while cruising, as well as watch TV when stationary. I've seen several dipole models (Jensen, Santeca) and omnidirectional models (Winegard, Glomex) that sound like they would do the trick, however I could use some advice on the most appropriate type of antenna for this application and maybe some recommendations on specific brands and models.

Thanks for any help,
Ray

Isn't this the same crap as the guy who writes that he drives up on a SWAT incident and cranks his scanner volume loud within earshot of the suspect, causing the suspect to make a bad move and get killed by the SWAT officers, who do the same to his scanner (and where the writer asks "Should I feel guilty, or something?", and "Should I sue?")? Nobody is this dumb. He's just stirring up the pot, the troll.

Extremely unlikely. There's no good reason for the RR's to go to 800 MHz,
and a lot of good ones (primarily coverage) to stay at VHF.

Trunking may start to become common, especially in congested areas.
NS and UP have experimented with it.

I checked into this a bit. The winegrad amplified omni should do what you want.

I built my own using a radio shack 25db video amp & the aluminum rail that goes around my fiberglass roof. I split the rail into two legs with a hacksaw & attached each of the two legs to the imputs of a 300/75 ohm tramsformer (the kind that goes from a flat TV cable to a round TV cable. The flat cable side gets connected to the antenna legs. use a coaxial cable to connect the antenna to the video amp. this works very well for me.

If your Eurovan has a plastic roof, you could probably tape two wires to the inside of the roof on opposite sides to serve as the antenna legs. make the wires as long as is practical & don't overlap them.

Hi Bill

I use an Alinco DJ-580 HT and I can scan from 100 MHz to 999.999 MHz as well as TX on 2 Meters and 70 cm. Most duel band units will scan the works with little or no mods and give you TX on the ham bands. I have not heard of one that will trunk track so you are out of luck on that one.

I found that for low band, I bought a Lowband base loaded commercial antenna just like what is on the CHP cars and it works great. Beats any scanner antenna I have ever used. If that is the only band you are listening to, you might want to try that.

Also don't forget about the feedline (coax) this is where most people lose.
They get a good antenna and put it high then buy cheap coax. I wouldn't use
anything less than RG-213 or something better.

# 4401. Icom R3: Expensive Toy or Useful device?

Newsgroup: rec.radio.scanner
Date: 2001-12-31 05:36:03 UTC
From: Enos Slobodnik <mortelavie@excite.com>
Message-ID: <3C2FF93E.C17F5C8E@excite.com>

I believe the R3 is the handheld scanner that does not only audio, but video signals. Is it just a gadget for someone with 500 bucks to toss out or does it offer some real use?

What do you think?

Slobodnik, Montana

Information: Traffic conditions, accidents, road situations like snow, flash floods, etc.

Entertainment: Listening for people that I know getting pulled over. It freaks them out when I ask why they were pulled over. They think I cruise the streets at all hours of the day and night. I don't tell them I heard it on the scanner.

I can also hear just how competent (or sometimes incompetent) our public servants are. Mostly very professional though.

Slobodnik, Montana

Mike -

Please look at the threads AGAIN. You will notice that I did not cause any
trouble here. I only responded with facts. You ought to be directing
your statements to the responsible parties that started the trouble. But
apparently, after being gone from the newsgroups for several years
you still haven't learned anything yet. How sad!

>chart would be pretty sweet too if it turns out to be what I want.

If you are having problems finding the OS-8200 we have them available from stock.

If by "wiring chart" you mean "which OS8200 wire is what" the original AR8200 (green) connections are detailed in the AR8200 manual on Page 117.

From late 2000 there was a slight change to the socket on the AR8200-II with the Purple/Violet and Blue wires being put to different use (previously Ground). This is why some early AOR CC8200 interfaces do not work with AR8200-II's.

Confirmation of the Aux socket connections are available on the AOR web site together with details on the HP cable.

Emilio... aren't you forgetting something about the hobby? It's a crime to Interfere with officials doing their duty AND reveal transmissions to a third party (your shoplifter). You goofed on both counts and got off easy.

You must be new to scanning.

Sue? Try this instead... buy a nice new scanner, it'll cost less.

BTW, funny how at the last minute the her turned into a him.

Case dismissed.

If you live really close, don't overlook all the non-aviation
frequency action you could pick up - airports are like small cities, with
their own police, fire, traffic and maintenance people...and their
associated radio gear.

I'll second that. I also have the R-2 and think it's a great little scanner
(and more). Runs a long time on the rechargeables they give you with it -
even longer on the 1600mah NiMH Panasonics that you can get.

Icom R-2. Great little radio.
I use around town and at air shows, car races.
Easier to use if you get the software and cable.
